Microenvironment-Derived Stem Cell Plasticity Jelena Krstic,Marietta Herrmann,Ivana Gadjanski,Slavko Mojsilovic,2017-12-21 Plasticity is the hallmark of stem cells. At the same time, stem cells, like any other cell type, are influenced by their microenvironment and respond to it accordingly. A specific microenvironment is defined by a variety of factors, including biological and chemical factors, cell-cell interactions, but also metabolic and mechanical cues. Such dynamic and specialized microenvironment where the stem cells reside is considered a stem cell niche. Tissue injury as well as malignant tissue alterations lead to changes in the niche influencing the plasticity and biology of residing stem cells. Similarly, the niche changes upon tissue damage, which eventually induces differentiation of stem cells and ultimately regeneration of the tissue.

Feline Orthopaedics Harry Scott,Juan M. Marti,Philip Witte,2022-05-12 Cats are not referred to specialists as frequently as dogs, meaning the general practitioner must routinely treat cats that have been involved in road traffic accidents and other musculoskeletal trauma. This book is the first of its kind to provide a practical and user-friendly guide to feline orthopaedics. With a new author team, led by RCVS Specialist in Small Animal Surgery (Orthopaedics) and Veterinary Neurology Harry Scott, the second edition has been thoroughly revised and updated. New chapters cover Physiotherapy and Oncology of the Feline Skeletal System. The book includes highly structured fully referenced text that provides a concise, straightforward guide to the recognition and management of specific diseases and conditions. In this new edition, the neurological causes of lameness have been given more in-depth discussion, with an emphasis on early recognition of clinical signs and diagnosis. The disorder sections are now divided into those likely to be associated with trauma (fractures and luxation) and those which are congenital or developmental. The text is supported by high quality radiographs, colour photographs and colour line drawings to illustrate principles, techniques and procedures. Combining their experience in practice and education, the authors have produced a book that appeals to general practice veterinarians, specialist feline practitioners and to students.

The book begins with an extensive discussion on the structural components of the neuroendocrine systems. The reader will be introduced to the anatomy and biology of the hypothalamus and the pituitary. The human hypothalamus is presented in particular detail using state-of-the-art imaging techniques. In the next section, the neuroanatomy of traditional hypothalamo-hypophyseal systems is highlighted, with chapters describing magnocellular neuroendocrine cells and discussing the respective types of hypothalamic neurons that regulate various pituitary hormones.
