All of the most common neonatal and pediatric emergencies are covered, with separate discussion of diseases that occur more commonly in newborns and those typically encountered later in childhood. For each condition, the main signs observed using the various imaging techniques - X-ray, Ultrasonography, Computed Tomography, and Magnetic Resonance - are described and illustrated with the aid of a wealth of images. Attention is drawn to those features of particular relevance to differential diagnosis, and the prognostic value of diagnostic imaging is also explained. The final section addresses topics of special interest, including the acute onset of abdominal neoplasms, the problems associated with radiation protection in the emergency setting, and medicolegal issues and informed content. The book will be of value for all radiologists working in emergency settings in which pediatric patients (newborn and children accessing the emergency department) are regularly examined.

Sparta's Second Attic War Paul Anthony Rahe,2020-08-04 In a continuation of his multivolume series on ancient Sparta, Paul Rahe narrates the second stage in the six-decades-long, epic struggle between Sparta and Athens that first erupted some seventeen years after their joint victory in the Persian Wars. Rahe explores how and why open warfare between these two erstwhile allies broke out a second time, after they had negotiated an extended truce. He traces the course of the war that then took place, he examines and assesses the strategy each community pursued and the tactics adopted, and he explains how and why mutual exhaustion forced on these two powers yet another truce doomed to fail. At stake for each of the two peoples caught up in this enduring strategic rivalry, as Rahe shows, was nothing less than the survival of its political regime and of the peculiar way of life to which that regime gave rise.

The Grand Strategy of Classical Sparta Paul Anthony Rahe,2015-11-24 DIV" "Powerfully illustrates . . . that this regime determined the character and limits of Sparta's domestic and foreign policy." (Susan D. Collins, IThe Review of Politics) More than 2500 years ago a confederation of small Greek city-states defeated the invading armies of Persia, the most powerful empire in the world. In this meticulously researched study, historian Paul Rahe argues that Sparta was responsible for the initial establishment of the Hellenic defensive coalition and was the most essential player in its ultimate victory. Drawing from an impressive range of ancient sources, including Herodotus and Plutarch, the author veers from the traditional Atheno-centric view of the Greco-Persian Wars to examine from a Spartan perspective the strategy that halted the Persian juggernaut. Rahe provides a fascinating, detailed picture of life in Sparta circa 480 B.C., revealing how the Spartans' form of government and the regimen to which they subjected themselves instilled within them the pride, confidence, discipline, and discernment necessary to forge an alliance that would stand firm against a great empire, driven by religious fervor, that held sway over two-fifths of the human race. "[Rahe] has an excellent eye for military logistics . . . crisp and persuasive." -The Wall Street Journal "Intensely well-researched and well-balanced." -Steve Donoghue, The National "Masterful." -Joseph Bottum, Books and Culture "A serious scholarly endeavor." -Eric W. Robinson, American Historical Review "This brilliant revisionist study . . . reminds us how Sparta . . . saved Western freedom from the Persian aggression-and did so because of its innate courage, political stability, and underappreciated genius." -Victor Davis Hanson, author of The Other Greeks "Full of keen understandings that help explain Spartan policy, diplomacy, and strategy." -Donald Kagan, author of The Peloponnesian War /DIV

The Brain Fog Fix Dr. Mike Dow,2016-12-13 Is stress preventing you from enjoying your daily life? Do you find that you're becoming more distracted or forgetful? Are the blues sapping your spirits? Or do you simply feel not quite like yourself? If you want to reclaim you focus, memory, and joy, you're not alone. There are millions of people fighting against the epidemic of brain fog that's sweeping the nation. The good news: It's not an irreparable condition; rather it's a side effect of modern-day living. Many of the foods we eat and the habits we have do not support our brains. We no longer get what we need in order to produce essential brain chemicals that keep us energized, calm, focused, optimistic, and inspired. And even worse, our choices could lead to long-term problems, like dementia, Alzheimer's disease, depression, and anxiety. Sadly, if you look at the way most of us live, it seems almost as though we've chosen a lifestyle deliberately intended to undermine our brain chemistry and our health. Fortunately, there is a solution. The Brain Fog Fix is an easy-to-follow three-week program designed to help naturally restore three of your brain's most crucial hormones: serotonin, dopamine, and cortisol. Rebalancing these chemicals will in turn enable the rest of your brain's chemistry to reach optimal levels. Each week of the program focuses on a different element of your life: • In week 1, you'll improve your mood by modifying your diet and using cognitive strategies to overcome pitfall thought patterns. • In week 2, you'll increase your energy by focusing on sleep, exercise, and memory-boosting games. • In week 3, you'll enhance your spirit through practices that help you connect to something larger than yourself and enable you to rediscover your joy in life. By the end of this simple program, you'll be thinking more clearly, remembering more accurately, learning more quickly, and unleashing the floodgates of your creativity. And you'll simply feel better - for now and in the long term.

Flowering Plants. Monocots Elizabeth A. Kellogg,2015-05-18 This volume is the outcome of a modern phylogenetic analysis of the grass family based on multiple sources of data, in particular molecular systematic studies resulting from a concerted effort by researchers worldwide, including the author. In the classification given here grasses are subdivided into 12 subfamilies with 29 tribes and over 700 genera. The keys and descriptions for the taxa above the rank of genus are hierarchical, i.e. they concentrate upon characters which are deemed to be synapomorphic for the lineages and may be applicable only to their early-diverging taxa. Beyond the treatment of phylogeny and formal taxonomy, the author presents a wide range of information on topics such as the structural characters of grasses, their related functional aspects and particularly corresponding findings from the field of developmental genetics with inclusion of genes and gene products instrumental in the shaping of morphological traits (in which this volume appears unique within this book series); further topics addressed include the contentious time of origin of the family, the emigration of the originally shade-loving grasses out of the forest to form vast grasslands accompanied by the switch of many members to C4 photosynthesis, the impact of herbivores on the silica cycle housed in the grass phytoliths, the reproductive biology of grasses, the domestication of major cereal crops and the affinities of grasses within the newly circumscribed order Poales. This volume provides a comprehensive overview of existing knowledge on the Poaceae (Gramineae), with major implications in terms of key scientific challenges awaiting future research. It certainly will be of interest both for the grass specialist and also the generalist seeking state-of-the-art information on the diversity of grasses, the most ecologically and economically important of the families of flowering plants.
