In Search of Stupidity Merrill R. Chapman,2003-07-08 Describes influential business philosophies and marketing ideas from the past twenty years and examines why they did not work.

The Computer Contradictionary Stan Kelly-Bootle,1995 Ascertain the meaning before consulting this dictionary, warns the author of this collection of deliberately satirical misdefinitions. New computer cultures and their jargons have burgeoned since this book's progenitor, The Devil's DP Dictionary, was published in 1981. This updated version of Stan Kelly-Bootle's romp through the data processing lexicon is a response to the Unix pandemic that has swept academia and government, to the endlessly hyped panaceas offered to the MIS, and to the PC explosion that has brought computer terminology to a hugely bewildered, lay audience.' The original dictionary, a pastiche of Ambrose Bierce's famous work, parried chiefly the mainframe and mini-folklore of the 1950s, 1960s and 1970s. This revision adds over 550 new entries and enhances many of the original definitions. Key targets are a host of new follies crying out for cynical lexicography including: the GUI-Phooey iconoclasts, object orienteering and the piping of BLObs down the Clinton-Gore InfoPike.

The Ethics of Information Warfare Luciano Floridi,Mariarosaria Taddeo,2014-03-25 This book offers an overview of the ethical problems posed by Information Warfare, and of the different approaches and methods used to solve them, in order to provide the reader with a better grasp of the ethical conundrums posed by this new form of warfare. The volume is divided into three parts, each comprising four chapters. The first part focuses on issues pertaining to the concept of Information Warfare and the clarifications that need to be made in order to address its ethical implications. The second part collects contributions focusing on Just War Theory and its application to the case of Information Warfare. The third part adopts alternative approaches to Just War Theory for analysing the ethical implications of this phenomenon. Finally, an afterword by Neelie Kroes - Vice President of the European Commission and European Digital Agenda Commissioner - concludes the volume. Her contribution describes the interests and commitments of the European Digital Agenda with respect to research for the development and deployment of robots in various circumstances, including warfare.

Cyberspace and International Relations Jan-Frederik Kremer,Benedikt Müller,2013-11-08 Cyberspace is everywhere in today's world and has significant implications not only for global economic activity, but also for international politics and transnational social relations. This compilation addresses for the first time the "cyberization" of international relations - the growing dependence of actors in IR on the infrastructure and instruments of the internet, and the penetration of cyberspace into all fields of their activities. The volume approaches this topical issue in a comprehensive and interdisciplinary fashion, bringing together scholars from disciplines such as IR, security studies, ICT studies and philosophy as well as experts from everyday cyber-practice. In the first part, concepts and theories are presented to shed light on the relationship between cyberspace and international relations, discussing implications for the discipline and presenting fresh and innovative theoretical approaches. Contributions in the second part focus on specific empirical fields of activity (security, economy, diplomacy, cultural activity, transnational communication, critical infrastructure, cyber espionage, social media, and more) and address emerging challenges and prospects for international politics and relations.
