It is intended both for academic researchers and especially for exploration geologists interested in mineral exploration in the northern part of the African continent. Recent changes in the mining laws of most countries in this region have encouraged international mining companies to invest in local mineral industries. Accordingly, this volume will be very useful for these professionals, as well as for researchers in the field of economic geology.

*Mineral Resources of Mongolia* Ochir Gerel,Franco Pirajno,Bayaraa Batkhishig,Jaroslav Dostal,2020-12-02 This book provides a brief geology, tectonic structure and metallogeny of Mongolia, central part of the giant Central Asian Orogenic Belt, and broad overview of major metallic (copper, gold, rare metals and rare earths, iron, lead and zinc, silver and platinum group), non-metallic (phosphorite and fluorite) and fuel (uranium and coal) mineral deposits and occurrences, covering their tectonic position, metallogeny and deposit types, geological characteristics and origin, including newly found deposits and occurrences based on authors research data and a large information obtained during geological exploration work. The book is intended for professional economic geologists, for earth science students and practicing geologists.

Phoscorites and Carbonatites from Mantle to Mine: the Key Example of the Kola Alkaline Province F. Wall,A. N. Zaitsev,2004-07-01 Phoscorites are dark, often very handsome, sometimes economically valuable, magnetite-apatite-silicate rocks, almost always associated with carbonatite. They are key to understanding the longstanding question of how carbonate and carbonate-bearing magmas rise to the crust and the Earth's surface. Despite this, they have been given little attention; a search on geological literature databases will produce thousands of references to carbonatite (up to 4125 on Georep) but not more than thirty references to phoscorite. This book goes some way to redress this balance. Over recent years many European and North American scientists have studied Kola rocks in collaboration with Russian colleagues. The idea for this book came from one such project funded by the European organisation, INTAS (Grant No 97-0722). The Kola Peninsula is one of the outstanding areas in the World for the concentration and economic importance of alkaline rocks. However, Russian work on the Kola complexes is still relatively unknown and a particular aim of this book, as well as presenting current research, is to make this knowledge accessible to English language readers. A large exploration programme on Kola alkaline rocks was active from 1950 to 1990 and involved teams of geologists who studied many kilometres of drill core and carried out detailed mineralogical and petrological studies.

**Mineralogy And Geology of Rare Earths in China** Zhang Peishan,Yang Xueming,Tao Kejie,1996-06-01 The aim of this book is to present recent achievements of in rare earth elements geology and mineralogy studies in China. The authors systematically describe all rare earth minerals and rare earth ore deposits discovered in China and their geological features. These rare earth minerals include huanghoite and baotite from China, as well as rare earth minerals from other parts of the world and new species and varieties discovered in China. For each mineral a systematic description of classification is given, such as chemical composition, crystallography and crystal structure, physical properties, X-ray powder data.
