Water Utility Benchmarking Sanford

Berg, 2010-03-31 Benchmarking is essential for those developing and implementing water policy. If decision-makers do not know where they have been or where they are, it would seem to be impossible to set reasonable targets for future performance. Information on water/sewerage system (WSS) operations, investments, and outputs is essential for good management and oversight. This book is designed to help decision makers identify the data required for performance comparisons over time and across water utilities, to understand the strengths and limitations of alternative benchmarking methodologies, and to perform (or commission) benchmark studies. This book provides an overview of the strengths and limitations of different methodologies for making performance comparisons over time and across water utilities (metric benchmarking). In addition, it identifies ways to determine the robustness of performance rankings. Current benchmarking activities in Latin America, Asia, Africa, Central Europe/Asia, and OECD nations are summarized. Five basic approaches to benchmarking characterize current studies: Core indicators and a summary or overall performance Indicator (partial metric method), Performance scores based on production or cost estimates ("total" methods), Performance relative to a model company (engineering approach), Process benchmarking, and Customer survey benchmarking. This volume is of interest to the water professionals, water utility managers and senior staff of regulatory agencies, professionals in

related government agencies, and consultants. Visit the IWA WaterWiki to read and share material related to this title:

Utility Benchmarking and Regulation in Developing Countries Silver Mugisha, 2011-05-14
Utility performance, especially in developing countries is still working toward the standard necessary to deliver best practice. Utility Benchmarking and Regulation in Developing Countries examines performance monitoring and regulation as a prominent efficiency enhancement tool and clarifies many of the unknowns regarding the design and approach surrounding the area of utility management. Principles and practices are linked in a way that is informative and accessible, highlighting the challenges facing those who are trying to improve performance in the water sector. Operational settings are complex and unpredictable in developing countries due to inadequate infrastructure planning and this book makes clear which systems work best in these situations. Utility Benchmarking and Regulation in Developing Countries discusses performance monitoring in the critical areas of utility management that achieve sustainable performance goals: Performance development planning Modes of performance monitoring Provocative approaches to incentives creation Monitoring through high incentive plans Customer relations monitoring Pro-poor oriented monitoring Careful use of partial performance indicators Proposed indicators for assessing governance incentives A case study on the National Water and Sewerage Corporation, Uganda is included in the book detailing the difficulties in discerning performance progress based on partial performance indicators. It

underlines disparities in basing performance conclusions on partial performance indicators on one hand and aggregate analysis using modern benchmarking toolkits on the other. This is an excellent handbook for utility monitors or regulators whose primary duty is to oversee performance management. It is a valuable resource for decision-makers, analysts, and policy-makers and can be used in capacity-building programs (both in-house and in universities) around the world.

Drought Management Planning in Water Supply Systems Enrique Cabrera, Jorge García-Serra, 2013-06-29 During the past decade many countries in the world have experienced droughts, with severe impacts on water urban supply systems. Because droughts are natural phenomena, water utilities must design and implement drought management plans. This topic was selected for the International Course on Drought Management Planning in Water Supply Systems, which took place in Valencia, Spain, on 9-12 December 1997, and was hosted by the Universidad Internacional Menéndez y Pelayo (UIIMP). The contributions in this book have been carefully selected and presented in four sections: Introduction Water Supply Systems Modernization Drought Management in an Urban Context Practical Cases (Israel, USA, Italy, Spain) To achieve a well-balanced approach, authors were invited from academia as well as from consultancies and water utilities, and have wide experience in the subject. The book is mainly

aimed at water supply engineers, working in utilities and consultancies.

Ammons has assembled a remarkable volume of benchmark data

for a comprehensive range of municipal government services. Municipal Benchmarks will be of considerable help for municipalities in laying the groundwork for an accountable government. - Harry Hatry, The Urban Institute I am delighted to see that ideas for advancing our industry are alive and thriving. Ammons's collection does an incredible service to every municipal manager in the country, and perhaps the world. These benchmarks clearly set standardized ways of looking at measuring the performance of municipal service delivery. - Ted Gaebler, City Manager, Rancho Cordoba, CA (co-author of Reinventing Government)

Privatization and Supply Chain Management Andrew Cox, Lisa Harris, David Parker, 2005-08-08 This book brings together two of the 'hottest issues' in current management thinking: the impact of privatization on the performance and behaviour of the companies involved, and the increasingly important role of purchasing and supplier relationships. The notion that efficiency is improved with privatization is critically examined. The authors examine whether privatized organizations have recognized the importance of the procurement role and developed both their procurement functions and supplier relationships so as to enhance competitiveness. Grounded in economic theory, and providing rich case study material, this volume makes a major contribution to an increasingly important area. It will be of interest to students and researchers in economics, business and management studies.

Handbook of Water and Wastewater Systems Protection Robert M. Clark, Simon Hakim, Avi Ostfeld, 2011-09-01 Following the events of 9/11, the Administrator of the US Environmental Protection Agency created the Water Protection Task Force (WPTF), which identified water and wastewater systems as a major area of vulnerability to deliberate attack. The WPTF suggested that there are steps that can be taken to reduce these vulnerabilities and to make it as difficult as possible for potential saboteurs to succeed. The WPTF recommended that be scrutinized with renewed vigor to secure water and wastewater systems against these possible threats. It also recommended that water and wastewater systems have a response plan in place in the event an act of terrorism occurs. The WPTF identified water distribution networks as an area of special vulnerability and highlighted the need for rapid on-line detection methods that are accurate and have a wide detection range. As a result of these recommendations novel technologies from various fields of science and engineering are now addressing water security issues and water and wastewater utilities are looking for innovative solutions. Once such technologies are available, there will be a rapid implementation process that will present many business opportunities for the private sector. However, in addition to terrorist threats water and wastewater systems are inherently vulnerable to natural disasters such as earthquakes and floods. This volume will address the problems associated with both intended terrorist attacks and natural disasters affecting

water or wastewater systems. The book is divided into parts based on the kinds of threats facing water and wastewater systems: (1) a direct attack on water and wastewater infrastructure storage reservoirs, and distribution and collection networks; (2) a cyber attack disabling the functionality of the water and wastewater systems or taking over control of key components which might result in system failures; and (3) a deliberate chemical or biological contaminant injection at one of the water distribution system's nodes. It will examine unique plans, technological and managerial innovations for protecting such systems, and includes descriptions of projects that were implemented to respond to natural disasters. Case studies are presented that discuss existing projects and evaluate their performance, with an emphasis on providing guidelines and techniques that can be implemented by water and wastewater planners and managers to deal with natural and manmade disasters should they occur.

Parallel Processing and the Future Data Center

Daniel Schutzer, 1994 Philosophy. Poetry. Reading Magnus's HERACLITEAN PRIDE, one is reminded of Fragment 115: 'To the soul belongs a Logos that increases itself.' Magnus's approach increases the logos, and through that increase fashions perspectives from which to engage Heraclitus' philosophy. His is not a traditional interpretation but a journey that is simultaneously a piercing through. In that respect, Magnus's account truly combines two meanings of 'traversing' to fashion a standpoint of plenitude. I believe his success in thus traversing stems from a powerful and daring insight about Heraclitus: 'Previous analyses and impact don't constitute its history, it's not

over.' For Magnus, the philosophy of Heraclitus is not over. Instead, he relates to Heraclitus in the moment when Heraclitus touches Magnus's own Logos and thus Magnus overcomes the danger against which Heraclitus warns in Fragment 72, for Magnus's account is never separated from that with which he is most in contact. This work is essential reading for serious inquiry into the great Sage from Ephesus.—Anne Ashbaugh, Chair, Philosophy and Religious Studies, Towson University
