Each of the products described has much more functionality than we could cover in just one book. The IBM SAN portfolio is rich in quality products that bring a vast amount of technicality and vitality to the SAN world. Their inclusion and selection is based on a thorough understanding of the storage networking environment that positions IBM, and therefore its customers and partners, in an ideal position to take advantage by their deployment. We discuss the latest additions to the IBM/Cisco SAN family and we show how they can be implemented in an open systems environment, focusing on the Fibre Channel protocol (FCP) environment. We address some of the key concepts that they bring to the market, and in each case, we give an overview of those functions that are essential to building a robust SAN environment.

This book is different from the many Migrating to a Mac books on the market, taking a similar to how a French phrase book gives English-speaking travelers what they don't know (French Phrases) in the context of what they do know (English phrases) rather than attempt to teach them an entirely new language. Rather than teach PC users how to acclimate themselves to a foreign piece of hardware with an entirely different operating system, Macs Translated for PC Users simply looks at all the tasks and shortcuts that PC users are familiar with and translates them so that readers know what to do on their Macs.
