Hassab,1997-04-01 In this revolutionary age of information systems, this book offers a unified approach to systems management that triggers greater speed of action and increases flexibility and productivity. The traditional foundation of a system's productive power must rest on updated management processes of the system's four elements-natural resources, technology or artificial resources, natural decomposition or specialization, and work integration or exchange. Systems Management weaves through these elements within the context of the ongoing information revolution.
