A Revolution Down on the Farm Paul K. Conkin,2008-09-01 At a time when food is becoming increasingly scarce in many parts of the world and food prices are skyrocketing, no industry is more important than agriculture. Humans have been farming for thousands of years, and yet agriculture has undergone more fundamental changes in the past 80 years than in the previous several centuries. In 1900, 30 million American farmers tilled the soil or tended livestock; today there are fewer than 4.5 million farmers who feed a population four times larger than it was at the beginning of the century. Fifty years ago, the planet could not have sustained a population of 6.5 billion; now, commercial and industrial agriculture ensure that millions will not die from starvation. Farmers are able to feed an exponentially growing planet because the greatest industrial revolution in history has occurred in agriculture since 1929, with U.S. farmers leading the way. Productivity on American farms has increased tenfold, even as most small farmers and tenants have been forced to find other work. Today, only 300,000 farms produce approximately ninety percent of the total output, and overproduction, largely subsidized by government programs and policies, has become the hallmark of modern agriculture. *A Revolution Down on the Farm: The Transformation of American Agriculture since 1929* charts the profound changes in farming that have occurred during author Paul K. Conkin's lifetime. His personal experiences growing up on a small Tennessee farm complement compelling statistical data as he explores America's vast agricultural transformation and considers its social, political, and economic consequences. He examines the history of American agriculture, showing how New

Deal innovations evolved into convoluted commodity programs following World War II. Conkin assesses the skills, new technologies, and government policies that helped transform farming in America and suggests how new legislation might affect farming in decades to come. Although the increased production and mechanization of farming has been an economic success story for Americans, the costs are becoming increasingly apparent. Small farmers are put out of business when they cannot compete with giant, non-diversified corporate farms. Caged chickens and hogs in factory-like facilities or confined dairy cattle require massive amounts of chemicals and hormones ultimately ingested by consumers. Fertilizers, new organic chemicals, manure disposal, and genetically modified seeds have introduced environmental problems that are still being discovered. A Revolution Down on the Farm concludes with an evaluation of farming in the twenty-first century and a distinctive meditation on alternatives to our present large scale, mechanized, subsidized, and fossil fuel and chemically dependent system.

Atlas of Liquid Biopsy Ludmilla Thomé Domingos Chinen, 2021-05-31 This book provides a wealth of images and

extensive information on circulating tumor cells (CTCs) and other cells usually observed in blood from patients with cancer, such as giant macrophages, and circulating tumor microemboli (CTM). The field of “liquid biopsy” began with the analysis of CTCs in the early 2000s. In the beginning, molecular techniques were developed to detect these cells in the blood. However, it has since become clear that CTCs initially require a cytopathological analysis to be detected without false positive and negative results. After detection, molecular analysis can be subsequently performed. Cancer is an important cause of mortality, especially when detected in late stages. Even with all the advances that have been made in its treatment, cancer is still challenging, as many patients do not respond to any therapy. Many health agencies have considered early diagnosis as a feasible tool. In this context, it is of the utmost importance to know the morphology and characteristics of CTCs to determine a correct diagnosis. Currently much of the scientific community is committed to expanding our knowledge of CTCs, and this work makes a valuable contribution, presenting hundreds of cell images from patients with various types of cancer, in many different stages of disease, and after receiving various treatments. The Atlas of Liquid Biopsy: Circulating Tumor Cells and Other Rare Cells in Cancer Patients’ Blood is an essential reference guide for all physicians, biologists, biomedics, and professionals working at clinical and research laboratories, hospitals and research centers.
