Pi: A Source Book Jonathan M. Borwein,2013-06-29 Our intention in this collection is to provide, largely through original writings, an extended account of pi from the dawn of mathematical time to the present. The story of pi reflects the most seminal, the most serious, and sometimes the most whimsical aspects of mathematics. A surprising amount of the most important mathematics and a significant number of the most important mathematicians have contributed to its unfolding directly or otherwise. Pi is one of the few mathematical concepts whose mention evokes a response of recognition and interest in those not concerned professionally with the subject. It has been a part of human culture and the educated imagination for more than twenty-five hundred years. The computation of pi is virtually the only topic from the most ancient stratum of mathematics that is still of serious interest to modern mathematical research. To pursue this topic as it developed throughout the millennia is to follow a thread through the history of mathematics that winds through geometry, analysis and special functions, numerical analysis, algebra, and number theory. It offers a subject that provides mathematicians with examples of many current mathematical techniques as well as a palpable sense of their historical development. Why a Source Book? Few books serve wider potential audiences than does a source book. To our knowledge, there is at present no easy access to the bulk of the material we have collected.

Groundbreaking Alvin Pang,Stewart Tan,Amit Prakash,Alvin Chua,Pearlwin Koh,Shuyi Ling,Nicholas Oh,Jie Hui Ong,Raynold Toh,Michelle Zhu,2019 To mark MND's 60th anniversary in 2019, *Groundbreaking: 60 Years of National Development in Singapore* chronicles the story of Singapore's national development from pre-independence to the present day. Led by a foreword by Minister for National Development Lawrence Wong and a preface by MND Permanent Secretary Ow Foong Pheng, the book draws on newspapers, interviews and photos to explore 200 years of urban planning in Singapore as well as the Ministry's most significant milestones and achievements in shaping Singapore as a city and transforming the lives of citizens through key initiatives and policies. The book outlines how the Ministry and its agencies transformed Singapore in just six decades from squatters in slums to proud homeowners in modern housing estates; from modest shophouses to towering skyscrapers; from dirty, dusty streets to lush gardens and world-renowned skylines. With a pragmatic, can-do spirit, strong camaraderie and a sense of common purpose, the Ministry brought together the custodians of Singapore's built environment—planners, developers, architects, policymakers and civil servants—to overcome the many challenges that have confronted Singapore in its journey from Third World to First. The Ministry and its agencies are the *kampung* that built a global city--

Building Militaries in Fragile States Mara E. Karlin,2017-12-08 Combining rigorous academic scholarship with the experience of a senior Pentagon policymaker, Mara E. Karlin explores the key national security issue of our time: how to effectively build partner militaries. Given the complex and complicated global security environment, declining U.S. defense budgets, and an increasingly connected (and often unstable) world, the United States has an ever-deepening interest in strengthening fragile states. Particularly since World War II, it has often chosen to do so by strengthening partner militaries. It will continue to do so, Karlin predicts, given U.S. sensitivity to casualties, a constrained fiscal environment, the nature of modern nationalism, increasing transnational security threats, the proliferation of fragile states, and limits on U.S. public support for military interventions. However, its record of success is thin. While most analyses of these programs focus on training and equipment, *Building Militaries in Fragile States* argues that this approach is misguided. Instead, given the nature of a fragile state, Karlin homes in on the outsized roles played by two key actors: the U.S. military and unhelpful external actors. With a rich comparative case-study approach that spans Europe, Asia, and the Middle East, Karlin unearths provocative findings that suggest the traditional way of working with foreign militaries needs to be rethought. Benefiting from the practical eye of an experienced national security official, her results-based exploration suggests new and meaningful findings for building partner militaries in fragile states.

Anesthesia for Trauma Corey S. Scher, 2014-08-28 Trauma is the leading cause of death among people under the age of 40 and it ranks third for all age groups. Still, relatively few clinicians specialize in trauma and training is often obtained through experience. The number of trauma patients is expected to continue to grow as pre-hospital care continues to advance. As well, hospitals increasingly see trauma treatment, which requires no pre-approval, as a good source of revenue. Given these developments, the number of opportunities for specialists trained in trauma, including anesthesiologists and critical care physicians, will expand in the years ahead. This book addresses the need for an up-to-date, comprehensive and clinically focused volume for practitioners and trainees in trauma anesthesia and critical care. It is organized by organ system. The editor is an attending physician at a major urban hospital center recognized worldwide for its outstanding emergency medical services including trauma care and is recruiting leading trauma anesthesiologists to contribute. Anesthesiologists, pain medicine physicians, critical care physicians and trainees are the target audience.

The Physics and Chemistry of Carbides, Nitrides and Borides R. Freer, 2012-12-06 Carbides, nitrides and borides are families of related refractory materials. Traditionally they have been employed in applications associated with engineering ceramics where either high temperature strength or stability is of primary importance. In recent years there has been a growing awareness of the interesting electrical, thermal and optical properties exhibited by these materials, and the fact that many can be prepared as monolithic ceramics, single crystals and thin films. In practical terms carbides, nitrides and borides offer the prospect of a new generation of semiconductor materials, for example, which can function at very high temperatures in severe environmental conditions.

However, as yet, we have only a limited understanding of the detailed physics and chemistry of the materials and how the preparation techniques influence the properties. Under the auspices of the NATO Science Committee an Advanced Research Workshop (ARW) was held on the Physics and Chemistry of Carbides, Nitrides and Borides (University of Manchester, 18-22 September, 1989) in order to assess progress to date and identify the most promising themes and materials for future research. An international group of 38 scientists considered developments in 5 main areas: The preparation of powders, monolithic ceramics, single crystals and thin films; Phase transformations, microstructure, defect structure and mass transport; Materials stability; Theoretical studies; Electrical, thermal and optical properties of bulk materials and thin films.
