Signal Processing and Multimedia Sankar Kumar Pal,William I. Grosky,Niki Pissinou,Timothy K. Shih,Dominik Ślęzak,2010-11-25 Welcome to the proceedings of the 2010 International Conferences on Signal Processing, Image Processing and Pattern Recognition (SIP 2010), and Multimedia, Computer Graphics and Broadcasting (MulGraB 2010) – two of the partnering events of the Second International Mega-Conference on Future Generation Information Technology (FGIT 2010). SIP and MulGraB bring together researchers from academia and industry as well as practitioners to share ideas, problems and solutions relating to the multifaceted aspects of image, signal, and multimedia processing, including their links to computational sciences, mathematics and information technology. In total, 1,630 papers were submitted to FGIT 2010 from 30 countries, which includes 225 papers submitted to SIP/MulGraB 2010. The submitted papers went through a rigorous reviewing process: 395 of the 1,630 papers were accepted for FGIT 2010, while 53 papers were accepted for SIP/MulGraB 2010. Of the 53 papers 8 were selected for the special FGIT 2010 volume published by Springer in the LNCS series. 37 papers are published in this volume, and 8 papers were withdrawn due to technical reasons. We would like to acknowledge the great effort of the SIP/MulGraB 2010 International Advisory Boards and members of the International Program Committees, as well as all the organizations and individuals who supported the idea of publishing this volume of proceedings, including SERSC and Springer. Also, the success of these two conferences would not have been possible without the huge support from our sponsors and the work of the Chairs and Organizing Committee.

Systems Biology of MicroRNAs in Cancer Ulf Schmitz,Olaf Wolkenhauer,Julio Vera-González,2022-11-09 This book provides an update on the latest development in the field of microRNAs in cancer research with an emphasis on translational research. Since the early 2000s, microRNAs have been recognized as important and ubiquitous regulators of gene expression. Soon it became evident that their deregulation can cause human diseases including cancer. This book focuses on the emerging opportunities for the application of microRNA research in clinical practice. In this context, computer models are presented that can help to identify novel biomarkers, e.g. in circulating microRNAs, and tools that can help to design microRNA-based therapeutic interventions. Other chapters

evaluate the role of microRNAs in immunotherapy, immune responses and drug resistance. Covering key topics on microRNAs in cancer research this book is a valuable resource for both emerging and established microRNA researchers who want to explore the potential of microRNAs as therapeutic targets or co-adjuvants in cancer therapies.

Neuroadaptive Systems Magdalena Fafrowicz,Tadeusz Marek,Waldemar Karwowski,Dylan Schmorrow,2012-10-29 Broadly defined as the science and technology of systems responding to neural processes in the brain, neuroadaptive systems (NASs) has become a rapidly developing area of study. One of the first books available in this emerging area, Neuroadaptive Systems: Theory and Applications synthesizes knowledge about human behavior, cognition, neural processing, and technology and how it can be used to optimize the design, development, modeling, simulation, and applications of complex neuro-based systems. Balancing coverage of theory and applications, the book examines the general aims of NASs and how neurogenomics can be applied in training applications. It includes important results and findings gathered from approximately two decades of brain computer interaction research. But more than this, the book details the underlying rationale for using NASs compared to other kinds of human-machine systems and raises questions and concerns about budding neuro-scientific areas that gives insight into the way humans may interact with neuro-technological systems in the future. With contributions from international professionals and researchers, this book presents state-of-the-art developments in neuroscience, human factors, and brain activity measurement. Packed with models, case studies, research results, and illustrations, it discusses approaches to understanding the functions of neuronal networks, and then explores challenges and applications of neuroadaptive systems. It provides tools for future development and the theory to support it.

The Value of Empathy Maria Baghramian,Meline Papazian,Rowland Stout,2020-12-30 The Value of Empathy explores various approaches to understanding empathy and investigates its moral and practical role. The central role of empathy in understanding others, and the need for it in our social and inter-personal encounters, is widely acknowledged by philosophers, social scientists and psychologists alike. Discussions of empathy abound, not only in more specialised academic publications, but also in traditional and social media. Yet neither a clear understanding, nor a uniform definition of this relatively new term is available. Indeed, one difficulty in discussing empathy, in philosophy and beyond, is the profusion of definitions; the difficulty is compounded by a lack of clarity in the distinction between empathy and cognate concepts such as sympathy and compassion. This book has two aims: Chapters 1–5 seek to address the dual concerns of the lack of clarity and profusion of interpretations by suggesting new ways of approaching the topic. The second aim of the book is to connect the more abstract discussions of empathy with its normative functions. Chapters 6–8 engage with the theoretical concerns relevant to the ethics of empathy and raise interesting points about its significance in ethical thought and action. The final four chapters focus on the practical normative significance of empathy by examining the connections between empathy, vulnerability and care in circumstances of ill health. The chapters in this book were originally published in the International Journal of Philosophical Studies.
