**Advances in Information Technology and Education** Honghua Tan, Mark Zhou, 2011-06-30 This two-volume set (CCIS 201 and CCIS 202) constitutes the refereed proceedings of the International Conference on Computer Science and Education, CSE 2011, held in Qingdao, China, in July 2011. The 164 revised full papers presented in both volumes were carefully reviewed and selected from a large number of submissions. The papers address a large number of research topics and applications: from artificial intelligence to computers and information technology; from education systems to methods research and other related issues; such as: database technology, computer architecture, software engineering, computer graphics, control technology, systems engineering, network, communication, and other advanced technology, computer education, and life-long education.

**Individual Differences in Arithmetic** Ann Dowker, 2019-03-27 Arithmetic is still hugely important in many aspects of modern life, but our personal attitudes to it differ greatly. Many people struggle with the basic principles of arithmetic, whilst others love it and feel confident in their arithmetical abilities. Why are there so many individual differences in people's performance in, and feelings about, arithmetic? Individual Differences in Arithmetic explores the idea that there is no such thing as arithmetical ability, only arithmetical abilities. The book discusses several important components of arithmetic, from counting principles and procedures to arithmetical estimation, alongside emotional and cognitive components of arithmetical performance. This edition has been extensively revised to include the latest research, including recent cross-cultural and cross-linguistic research, the development of new interventions for children with difficulties and studies of early foundations of mathematical abilities. Drawing on developmental, educational, cognitive and neuropsychological studies, this book will be essential reading for all researchers of mathematical cognition. It will also be of interest to educators and other professionals working within individuals with arithmetic deficits.

Improving Primary Mathematics Education, Teaching and Learning Mellony Graven, Hamsa Venkat, 2017-01-19 This book focuses on how to improve the teaching and learning of primary level mathematics education within resource-constrained contexts. It builds on two large numeracy projects within South Africa which speak to broader, global concerns and highlight how research and development not only enables one to meet ethical imperatives but also explore how further interventions can be developed. Teacher and research communities must work together to create mutually beneficial relationships and establish a cohesive understanding of the requirements of primary mathematics education.

Design Concepts for a Virtualizable Embedded MPSoC Architecture Alexander Biedermann, 2014-11-10 Alexander Biedermann presents a generic hardware-based virtualization approach, which may transform an array of any off-the-shelf embedded processors into a multi-processor system with high execution dynamism. Based on this approach, he highlights concepts for the design of energy aware systems, self-healing systems as well as parallelized systems. For the latter, the novel so-called Agile Processing scheme is introduced by the author, which enables a seamless transition between sequential and parallel execution schemes. The design of such virtualizable systems is further aided by introduction of a dedicated design framework, which integrates into existing, commercial workflows. As a result, this book provides comprehensive design flows for the design of embedded multi-processor systems-on-chip.

**Annual Review of United Nations Affairs 2009/2010 VOLUME III** Joachim Muller, Karl P. Sauvant, 2011-04-15 a. The set generally Since the publication of its first edition in 1950, the Annual Review of United Nations Affairs has stood as the authoritative resource for scholars, students, and practitioners researching the latest developments of that august body. From the insightful introduction, prepared each year by a distinguished expert on UN affairs, to the full-text presentation of reports and resolutions and the helpful subject index, ARUNA provides a practical tour of each year's U.N. actions and debates. The expert selection of documents by Joachim Muller and Karl Sauvant and the topic-based organization of those documents make any researcher's task much easier than the vast searching, sorting, and pruning required by the U.N.'s website. The series' topic-based organization of the materials and subject index lend invaluable guidance to all researchers. ARUNA presents comprehensive documentation of the work of the UN on an annual basis, starting in September of each year with the beginning of the regular sessions of the General Assembly. Coverage of the UN's key organs is provided, including the General Assembly, the Security Council, the Economic and Social Council (ECOSOC), the International Court of Justice, and the UN Secretariat. In addition, selected reports of intergovernmental bodies and expert groups are included. Solely official UN documentation is used. ARUNA occupies a special place in the publications on the work of the UN, as it allows readers to obtain an overview of the principal developments in its key organs. This makes it an important reference source for policy-makers and academic researchers. b. The 2009-2010 volumes This year's edition continues to focus on the world financial crisis and the reaction of the United Nations and the international financial system to that crisis. The Overview to this year's edition, written by Joachim Muller and Karl Sauvant, examines the changing role of the United Nations and explores ways in which the management of the financial crisis has impacted that role. The Introduction to this year's edition also examines the effects of this crisis; this Introduction is drawn from the Report of the Commission of Experts of the President of the United Nations General Assembly on Reforms of the International Monetary and Financial System, as well as a slightly edited version of a Preface to that report written by Professor Joseph E. Stiglitz. The Introduction discusses the findings of the Commission and proposes the creation of a new institution, a Global Economic Coordination Council, which would be supported by an International Panel of Experts with a geographically diverse membership that would represent the interests of emerging and developing countries as well as those of developed countries. Dr. Joseph E. Stiglitz, who served as Chairman of the Commission and wrote the Preface to the Commission's Report, holds joint professorships at Columbia University's Economics Department and its Business School. He is also Co-founder and Co-President of the Initiative for Policy Dialogue. From 1997 to 2000 he was the World Bank's Senior Vice President for Development Economics and Chief Economist. From 1995 to 1997 he served as Chairman of the U.S. Council of Economic Advisers and as a member of President Clinton's cabinet. From 1993 to 1995 he was a member of the Council of Economic Advisers. He was previously a professor of economics at Stanford, Princeton, Yale, and All Souls College. Dr. Stiglitz is also a leading scholar of the economics of the public sector and was awarded the Nobel Prize in Economics in 2001 in addition to the American Economic Association's biennial John Bates Clark Award in 1979. His recent publications include Freefall: America, Free Markets, and the Sinking of the World Economy (2010), Making Globalization Work (2006), Fair Trade for All (2005), and Globalization and its Discontents (2002). The 2009-2010 volumes of ARUNA therefore also devote considerable

attention to the financial crisis as well as other international crises. Among the documents in the 2009-2010 volumes are the complete General Assembly resolutions, as well as the Report and Resolutions of the Security Council and the Economic and Social Council (ECOSOC). Annual Reports of note include reports of the United Nations Children's Fund (UNICEF), the UN Development Programme and UN Population Fund, the UN High Commissioner for Human Rights, the UN High Commissioner for Refugees, the UN Relief and Works Agency for Palestine Refugees in the Near East, and the World Food Programme. Mr. Muller and Dr. Sauvart have also selected progress reports on key peacekeeping, peace-building, and political missions, including those for Afghanistan, the Democratic Republic of the Congo, Haiti, Iraq, the Middle East, Sudan, and West Africa. c. Volume III (this volume) This volume contains the following: Chapter 1: General Assembly, Sixty-fourth Session (continued) 3. Resolutions Adopted by the General Assembly at Its Sixty-fourth Session (continued) (Resolutions 64/104 through 64/199) d. Guest Authors of previous years' editions Each annual edition of ARUNA is introduced by a Guest Author, a distinguished expert on UN affairs, who highlights the outstanding themes of the year in review. Together with an overview provided by the editors, this introduction is intended to facilitate access to the material and, above all, to make it easier for users of ARUNA to see the forest for the trees. This year's ARUNA includes excerpts from the Report of the Commission of Experts of the President of the United Nations General Assembly on Reforms of the International Monetary and Financial System (21 Sept. 2009), and from a slightly edited version of a Preface to that report written by Professor Joseph E. Stiglitz. However, the roster of distinguished experts who have contributed this introduction in the past is also worthy of mention: Jose Antonio Ocampo: ARUNA 2008/2009 edition Professor Jose Antonio Ocampo is Co-President of the Initiative for Policy Dialogue. He is also Professor in the School of International and Public Affairs and Fellow of the Committee on Global Thought at Columbia University. Professor Ocampo previously held the positions of Under-Secretary-General of the United Nations for Economic and Social Affairs, Executive Secretary of the United Nations Economic Commission for Latin America and the Caribbean, and Minister of Finance, Agriculture, and Planning of Colombia. In 2009, he was a member of the Commission of Experts of the President of the United Nations General Assembly on Reforms of the International Monetary and Financial System. Professor Ocampo is also the author of numerous books and articles on macroeconomics policy and theory, economic development, international trade, and economic history. His recent publications include *Stability with Growth: Macroeconomics, Liberalization and Development*, with Joseph E. Stiglitz, Shari Spiegel, Ricardo Ffrench-Davis and Deepak Nayyar (New York: Oxford University Press, 2006). Jeffrey D. Sachs: ARUNA 2007/2008 edition Professor Jeffrey D. Sachs is Director of the Earth Institute at Columbia University and Special Advisor to the Secretary-General of the UN on the Millennium Development Goals. Professor Sachs's introduction to ARUNA 2007/2008 was titled *Towards a New Global Protocol on Climate Change*, in which he argued that solving the climate change problem will demand four steps: scientific consensus, public awareness, the development of alternative technologies, and a global framework for action. He dealt, in particular, with the science underpinning the negotiations for a new global protocol on climate change, as a successor to the Kyoto Protocol. Professor Sachs argued that climate change crises can only be solved through the goals, leadership, and treaty mechanisms of the UN. Edward C. Luck: ARUNA 2006/2007 edition Professor Edward C. Luck is UN Special Advisor on the Responsibility to Protect and Vice President and Director of Studies at the International Peace Academy. From 1984 to 1994, he served as President and Chief Executive Officer of the UN Association of the USA (UNA-USA). Professor Luck's introduction to ARUNA 2006/2007 covered *The responsible sovereign and the responsibility to protect*, in which he addressed the scope and content of what was agreed at the 2005 World Summit, the implications of the responsibility to protect (RtoP) for notions of state sovereignty, and some of the conceptual, architectural, and policy challenges then facing UN Secretary-General Ban Ki-moon's commitment to operationalizing the responsibility to protect and translating it from words to deeds. Louise Frechette: ARUNA 2005/2006 edition Ms Louise Frechette is Distinguished Fellow at the Centre for International Governance Innovation, Waterloo, Ontario. Until March 2006, she was the first Deputy Secretary-General of the UN; before that, she was Permanent Representative of Canada to the UN. Ms Frechette's introduction to ARUNA 2005/2006 covered *United Nations reform: an unfinished story*. As the first Deputy Secretary-General of the UN, Ms Frechette was uniquely positioned to undertake a personal assessment of what has changed and what has not changed in the past decade at the UN and why. She examined if the UN is functioning better than it was 15 years ago, why reform is so difficult to achieve and what the future holds for the institutions. Rubens Ricupero: ARUNA 2004/2005 edition Mr Rubens Ricupero is Dean of the Fundacno Armando Alvares Penteado (FAAP), Sao Paulo and was formerly Secretary-General of UN Conference on Trade and Development (UNCTAD) and Minister of Finance of Brazil. Mr Ricupero's introduction to ARUNA 2004/2005 covered *The difficulty of building consensus in an age of extremes and examined the mysteries of the negotiating process leading to the outcome of the 2005 World Summit*. Rather than a Grand Bargain of a comprehensive UN reform in the areas of development, security and human rights, it is argued that the Summit ended more on a note of lamentation and regret over a missed opportunity. Mr Ricupero concludes that contrary to the daring proclamation at the outset by the Secretary-General, the conditions indispensable to succeed were not in place. Indeed, it was hard to imagine that an ambitious and balanced reform package for the UN could have had any real chance of succeeding.

The Oxford Handbook of Numerical Cognition Roi Cohen Kadosh, Ann Dowker, 2015 How do we understand numbers? Do animals and babies have numerical abilities? Why do some people fail to grasp numbers, and how we can improve numerical understanding? Numbers are vital to so many areas of life: in science, economics, sports, education, and many aspects of everyday life from infancy onwards. Numerical cognition is a vibrant area that brings together scientists from different and diverse

research areas (e.g., neuropsychology, cognitive psychology, developmental psychology, comparative psychology, anthropology, education, and neuroscience) using different methodological approaches (e.g., behavioral studies of healthy children and adults and of patients; electrophysiology and brain imaging studies in humans; single-cell neurophysiology in non-human primates, habituation studies in human infants and animals, and computer modeling). While the study of numerical cognition had been relatively neglected for a long time, during the last decade there has been an explosion of studies and new findings. This has resulted in an enormous advance in our understanding of the neural and cognitive mechanisms of numerical cognition. In addition, there has recently been increasing interest and concern about pupils' mathematical achievement in many countries, resulting in attempts to use research to guide mathematics instruction in schools, and to develop interventions for children with mathematical difficulties. This handbook brings together the different research areas that make up the field of numerical cognition in one comprehensive and authoritative volume. The chapters provide a broad and extensive review that is written in an accessible form for scholars and students, as well as educationalists, clinicians, and policy makers. The book covers the most important aspects of research on numerical cognition from the areas of development psychology, cognitive psychology, neuropsychology and rehabilitation, learning disabilities, human and animal cognition and neuroscience, computational modeling, education and individual differences, and philosophy. Containing more than 60 chapters by leading specialists in their fields, the Oxford Handbook of Numerical Cognition is a state-of-the-art review of the current literature.

*Multilingualism in Mathematics Education in Africa* Anthony A. Essien, 2023-12-14 This book brings together the first book collection of African research in mathematics education in multilingual societies and chronicles current research in different linguistic contexts across the African continent, (including Algeria, Namibia, Malawi, Morocco, Rwanda, South Africa) on issues of multilingualism in mathematics education, but more importantly, it foregrounds pertinent issues for future research. With many of the authors building on earlier path-breaking African research, the book is a unique contribution of careful thinking through how linguistic diversity and multilingualism manifest in ways that differ from one geopolitical context to another. This volume is an important contribution to the growing recognition of multilingualism as the global 'linguistic dispensation' in mathematics education. It is an invitation to how we might (as an international community where more and more multilingualism is the norm rather than an exception) pay more attention to the multilingual agency and capabilities of both students and teachers in order to better harness the epistemic potential of multiple languages in contexts of language diversity in mathematics education.

*Managing Performance in Construction* Leonhard E. Bernold, S. M. AbouRizk, 2010-07-06 Construction is the country's single largest manufacturing industry. However, it is a sector that lacks benchmarks against which to gauge performance. This modern thinking intends to provide insight to construction productivity improvement. Taking cues from manufacturing sectors such as computer, automobile and chemical companies, this book will apply the lessons learned to building construction. Supported with a range of pedagogical devices, the book will be of equal value to construction managers and civil engineers, and students with different learning methods.

**Developmental Psychology: From Infancy to Development** Fiona White, David Livesey, Brett Hayes, 2012-08-20 Developmental Psychology: From infancy to adulthood, 3rd edition, continues to bring together a balanced focus on Australian and international research contributions in developmental psychology. Students and lecturers alike will find this text addresses the issues of lifespan development in a rigorous and challenging way using a thematic rather than chronological approach. International and national research on graduate attributes consistently identifies critical thinking as one of the most important skills for psychology students. The inclusion of Critical Thinking for Group Discussion at the end of each chapter is designed to encourage students in the development of this key skill. These questions help students develop the ability to engage in discussions on truth and validity and evaluate the relative importance of ideas and data. Students learn by doing, and this is encouraged through interactive features such as Stop and Review, Research Focus Boxes, and Practical Exercises which engage them in group discussion and challenge

them to delve into complex and cross-domain analysis of lifespan development. Concept maps at the start of each chapter provide students with a visual snapshot of the chapter content.

**Professional Clojure** Jeremy Anderson, Michael Gaare, Justin Holguín, Nick Bailey, Timothy Pratley, 2016-06-07 Clear, practical Clojure for the professional programmer Professional Clojure is the experienced developer's guide to functional programming using the Clojure language. Designed specifically to meet the needs of professional developers, this book briefly introduces functional programming before skipping directly to the heart of using Clojure in a real-world setting. Read from beginning to end, this book serves as a clear, direct guide to Clojure programming—but the comprehensive coverage and detail makes it extraordinarily useful as a quick reference for mid-project snags. The author team includes four professional Clojure developers, ensuring professional-level instruction from a highly practical perspective. Clojure is an open-source programming language maintained and supported by Cognitect., and quickly gaining use across industries at companies like Amazon, Walmart, Facebook, Netflix, and more. This guide provides a concise, yet thorough resource for professional developers needing to quickly put Clojure to work. Parse the difference between functional and object-oriented programming Understand Clojure performance and capabilities Develop reactive web pages using ClojureScript Adopt an REPL-driven development workflow Clojure is a modern dialect of Lisp, designed for concurrency and Java compatibility. It can be used with the Java virtual machine, Microsoft's Common Language Runtime, and JavaScript engines, providing a level of both versatility and functionality that is appealing to more and more enterprise-level developers. As requirements grow increasingly complex, stepping away from imperative programming can dramatically streamline the development workflow. Professional Clojure provides the expert instruction that gets professionals up to speed and back to work quickly.

Space, Time and Number in the Brain Stanislas Dehaene, Elizabeth Brannon, 2011-07-13 The study of mathematical cognition and the ways in which the ideas of space, time and number are encoded in brain circuitry has become a fundamental issue for neuroscience. How such encoding differs across cultures and educational level is of further interest in education and neuropsychology. This rapidly expanding field of research is overdue for an interdisciplinary volume such as this, which deals with the neurological and psychological foundations of human numeric capacity. A uniquely integrative work, this volume provides a much needed compilation of primary source material to researchers from basic neuroscience, psychology, developmental science, neuroimaging, neuropsychology and theoretical biology. The first comprehensive and authoritative volume dealing with neurological and psychological foundations of mathematical cognition Uniquely integrative volume at the frontier of a rapidly expanding interdisciplinary field Features outstanding and truly international scholarship, with chapters written by leading experts in a variety of fields

**Mathematics Learning in Early Childhood** National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Early Childhood Mathematics, 2009-11-13 Early childhood mathematics is vitally important for young children's present and future educational success. Research demonstrates that virtually all young children have the capability to learn and become competent in mathematics. Furthermore, young children enjoy their early informal experiences with mathematics. Unfortunately, many children's potential in mathematics is not fully realized, especially those children who are economically disadvantaged. This is due, in part, to a lack of opportunities to learn mathematics in early childhood settings or through everyday experiences in the home and in their communities. Improvements in early childhood mathematics education can provide young children with the foundation for school success. Relying on a comprehensive review of the research, Mathematics Learning in Early Childhood lays out the critical areas that should be the focus of young children's early mathematics education, explores the extent to which they are currently being incorporated in early childhood settings, and identifies the changes needed to improve the quality of mathematics experiences for young children. This book serves as a call to action to improve the state of early childhood mathematics. It will be especially useful for policy makers and practitioners—those who work directly with children and their families in shaping the policies that affect the education of young children.

**More Trouble with Maths** Steve Chinn, 2012-05-23 There are many factors that can contribute to the learning difficulties children and adults have with mathematics. These include poor working memory, difficulties in retrieving so-called 'basic' facts and the ability to remember and apply formulas and procedures correctly. This highly practical teacher resource is for anyone who would like to accurately and effectively identify dyscalculia amongst their pupils. Written in an engaging and user-friendly style, Steve Chinn draws on his extensive experience and expertise and shows how to consider all the factors relating to mathematical learning difficulties explains how these factors can be investigated explores their impact on learning discusses and provides a range of tests ranging from pre-requisite skills such as working memory to a critique of normative tests for mathematics knowledge and skills. The book will guide the reader in the interpretation of tests, emphasising the need for a clinical approach when assessing individuals, and shows how diagnosis and assessment can become part of everyday teaching. This resource also includes pragmatic tests which can be implemented in the classroom, and shows how identifying the barriers is the first step in setting up any programme of intervention.
