📖 Application Administrators Handbook Kelly C Bourne, 2013-09-16 An application administrator installs, updates, optimizes, debugs and otherwise maintains computer applications for an organization. In most cases, these applications have been licensed from a third party, but they may have been developed internally. Examples of application types include enterprise resource planning (ERP), customer resource management (CRM), and point of sale (POS), legal contract management, time tracking, accounts payable/receivable, payroll, SOX compliance tracking, budgeting, forecasting and training. It provides detailed, hands-on instructions on how to perform many specific tasks that an application administrator must be able to handle.
