The Tempo Implications of Bach's Notation Leslie M. Kenney,2021-03-13 This research into the tempo implications of Bach's notation answers the age-old question of Bach's tempos, providing insight into Bach's intended musical effects. Johann Sebastian Bach (1685-1750) was a very busy man. At times he

composed a new church piece every week, often barely completing the piece a day or two before the church service. In order to ensure that his music lasted the appropriate amount of time, he needed to calculate duration while composing. To do so he needed to have specific tempos in mind. A review of the contemporaneous performance practice literature indicates that, in this time period before the development of the metronome: - Establishing the correct tempo was considered an important and difficult task. - Musicians used a fixed pulse rate called the tactus to establish tempos. - Once they established a tempo, they were able to vary that tempo by using proportions. - The time signature and the shortest note value of a piece both communicate information about tempo. Through a comprehensive review of Bach's notation, this research demonstrates that there is one optimal way to explain the tempo implications of Bach's notation. It further shows that Bach used two different tactus speeds, and indicated a change in the speed of the tactus by using mensural time signatures, which are derived from the ancient music system of the same name. After reading this book, the musician will be able to determine Bach's intended tempo for any Bach movement by identifying the time signature, tactus speed, and shortest note value. Bach's intended tempo gives valuable clues about his intended musical effect. Because Bach's tempo often differs from current performance practice, this research transforms our understanding of his music. This book is for classical musicians, musicologists, music students, and anyone who appreciates Bach's music. While the research is important and significant, it is presented so that an amateur musician will be able to follow the arguments.

There Plant Eyes M. Leona Godin,2021-06-01 From Homer

to Helen Keller, from Dune to Stevie Wonder, from the invention of braille to the science of echolocation, M. Leona Godin explores the fascinating history of blindness, interweaving it with her own story of gradually losing her sight. “[A] thought-provoking mixture of criticism, memoir, and advocacy. —The New Yorker

There Plant Eyes probes the ways in which blindness has shaped our ocularcentric culture, challenging deeply ingrained ideas about what it means to be “blind.” For millennia, blindness has been used to signify such things as thoughtlessness (“blind faith”), irrationality (“blind rage”), and unconsciousness (“blind evolution”). But at the same time, blind people have been othered as the recipients of special powers as compensation for lost sight (from the poetic gifts of John Milton to the heightened senses of the comic book hero Daredevil). Godin—who began losing her vision at age ten—illuminates the often-surprising history of both the condition of blindness and the myths and ideas that have grown up around it over the course of generations. She combines an analysis of blindness in art and culture (from King Lear to Star Wars) with a study of the science of blindness and key developments in accessibility (the white cane, embossed printing, digital technology) to paint a vivid personal and cultural history. A genre-defying work, There Plant Eyes reveals just how essential blindness and vision are to humanity’s understanding of itself and the world.

Shaping Time David Epstein, 1995 Epstein investigates the relationship between the ineffable art of music and the hard science of neurobiology. He integrates philosophic and scientific inquiry to formulate a theory of the fundamental yet elusive quality in music time. Derived from an analytical study of motion, tempo and emotion, *Shaping Time* offers a theory of the way we perceive, perform and interpret music. Epstein suggests that audience satisfaction with a musical performance results from timing trajectories established by the performer at the beginning of the piece. When the timing of a performance conflicts with audience anticipation, listeners experience physical and affective discomfort. Epstein applies his thesis to a wide range of examples for the repertoire.

Music, Mind, and Brain Manfred Clynes, 2013-06-29 There is much music in our lives -yet we know little about its function. Music is one of man's most remarkable inventions - though possibly it may not be his invention at all: like his capacity for language his capacity for music may be a naturally evolved biologic .function. All cultures and societies have music. Music differs from the sounds of speech and from other sounds, but only now do we find ourselves at the threshold of being able to find out how our brain processes musical sounds differently from other sounds. We are going through an exciting time when these questions and the question of how music moves us are being seriously investigated for the first time from the perspective of the co-ordinated functioning of the organism: the perspective of brain function, motor function as well as perception and

experience. There is so much we do not yet know. But the roads to that knowledge are being opened, and the coming years are likely to see much progress towards providing answers and raising new questions. These questions are different from those music theorists have asked themselves: they deal not with the structure of a musical score (although that knowledge is important and necessary) but with music in the flesh: music not outside of man to be looked at from written symbols, but music-man as a living entity or system.
