The Washingtons. General Index, L-Z Justin

Glenn, 2018-04-26 Published in two parts, the General Index of all Washington descendants and their spouses completes a ten-volume history that traces the "Presidential Line" of the Washington family in America. Volume one began with the immigrant John Washington who settled in Westmoreland County, Va., in 1657, married Anne Pope, and became the great-grandfather of President George Washington. It contained the record of their descendants for a total of seven generations. Subsequent volumes two through eight continued this family history for an additional eight generations, also highlighting most notable members (volume two) and tracing lines of descent from the royalty and nobility of England and continental Europe (volume three). Volume nine treated in detail the recently discovered line of William Wright (died in Franklin County, Va., ca. 1809). It also provided briefer accounts of five other Southern Wright families that have often been mentioned by researchers as close kinsmen of George Washington. ADVANCE PRAISE "At long last the Washingtons have a published history worthy of their place in history. Glenn has done a masterful job. . . . I am convinced that his work will be of wide interest to historians and academics as well as members of the Washington family itself. Although the surname Washington is perhaps the best known in

American history and much has been written about the Washington family for well over a century, it is surprising that no comprehensive family history has been published. Justin M. Glenn's *The Washingtons: A Family History* finally fills this void for the branch to which General and President George Washington belonged, identifying some 63,000 descendants. This is truly a family history, not a mere tabulation of names and dates, providing biographical accounts of many of the descendants of John Washington who settled in Westmoreland County, Virginia, in 1657." — John Frederick Dorman, editor of *The Virginia Genealogist* (1957-2006) and author of *Adventurers of Purse and Person* "Decades of reviewing Civil War books have left me surprised and delighted when someone applies exhaustive diligence to a topic not readily accessible. Dr. Glenn surely meets that standard with the meticulous research that unveils the Washington family in gratifying detail—many of them Confederates of interest and importance." — Robert K. Krick, author of *The Smoothbore Volley that Doomed the Confederacy* and *Stonewall Jackson at Cedar Mountain*

Augenzeugenberichte zum 11. September 2001 und zu den Kriegen des 17. Jahrhunderts spannen den Bogen der Beiträge des vorliegenden Bandes. Eine Untersuchung der massenmedialen Darstellung der »Taten« des Kreuzers Emden im Ersten Weltkrieg – eine der zeitgenössischen Mythen – steht neben Analysen von Max Frischs »Die Chinesische Mauer« und den Schriften Pat Barkers. Der Band zeichnet sich durch eine Vielfalt von Ansätzen aus und repräsentiert dennoch nur ein kleines Spektrum der Bandbreite möglicher Themen. Ergänzt werden die Beiträge durch Rezensionen zu einschlägigen Neuerscheinungen sowie durch eine Bibliographie wissenschaftlicher Publikationen aus dem Jahr 2005.

The Airborne Microparticle E. James Davis, Gustav

Schweiger, 2012-12-06 It has been thirty years since one of the authors (EJD) began a collaboration with Professor Milton Kerker at Clarkson University in Potsdam, New York using light scattering methods to study aerosol processes. The development of a relatively short-lived commercial particle levitator based on a modification of the Millikan oil drop experiment attracted their attention and led the author to the study of single droplets and solid microparticles by levitation methods. The early work on measurements of droplet evaporation rates using light scattering techniques to determine the size slowly expanded and diversified as better instrumentation was developed, and faster computers made it possible to perform Mie theory light scattering calculations with ease. Several milestones can be identified in the

progress of single microparticle studies. The first is the introduction of the electrodynamic balance, which provided more robust trapping of a particle. The electrodynamic levitator, which has played an important role in atomic and molecular ion spectroscopy, leading to the Nobel Prize in Physics in 1989 shared by Wolfgang Paul of Bonn University and Hans Dehmelt of the University of Washington, was easily adapted to trap microparticles. Simultaneously, improvements in detectors for acquiring and storing light scattering data and theoretical and experimental studies of the interesting optical properties of microspheres, especially the work on morphology dependent resonances by Arthur Ashkin at the Bell Laboratories, Richard Chang, from Yale University, and Tony Campillo from the Naval Research Laboratories in Washington D. C.
