Underbug Lisa Margonelli, 2018-08-21 The award-winning journalist Lisa Margonelli, national bestselling author of *Oil on the Brain: Petroleum's Long, Strange Trip to Your Tank*, investigates the environmental and economic impact termites inflict on human societies in this fascinating examination of one of nature's most misunderstood insects. Are we more like termites than we ever imagined? In *Underbug*, the award-winning journalist Lisa Margonelli introduces us to the enigmatic creatures that collectively outweigh human beings ten to one and consume \$40 billion worth of valuable stuff annually—and yet, in Margonelli's telling, seem weirdly familiar. Over the course of a decade-long obsession with

the little bugs, Margonelli pokes around termite mounds and high-tech research facilities, closely watching biologists, roboticists, and geneticists. Her globe-trotting journey veers into uncharted territory, from evolutionary theory to Edwardian science literature to the military industrial complex. What begins as a natural history of the termite becomes a personal exploration of the unnatural future we're building, with darker observations on power, technology, historical trauma, and the limits of human cognition. Whether in Namibia or Cambridge, Arizona or Australia, Margonelli turns up astounding facts and raises provocative questions. Is a termite an individual or a unit of a superorganism? Can we harness the termite's properties to change the world? If we build termite-like swarming robots, will they inevitably destroy us? Is it possible to think without having a mind? Underbug burrows into these questions and many others—unearthing disquieting answers about the world's most underrated insect and what it means to be human.

Abe, David Edward Bignell, T. Higashi, 2014-11-14 The book is a new compendium in which leading termite scientists review the advances of the last 30 years in our understanding of phylogeny,

fossil records, relationships with cockroaches, social evolution, nesting, behaviour, mutualisms with archaea, protists, bacteria and fungi, nutrition, energy metabolism, population and community ecology, soil conditioning, greenhouse gas production and pest status.

Termite Susan H. Gray,2009-01-01 Termites can invade homes and cause a lot of damage. Termites that invade new countries can damage more than just homes. The Formosan subterranean termite was accidentally brought to the United States on infested ships. These invaders have disrupted ecosystems and caused billions of dollars in damage to buildings, crops, and trees. Look inside to learn more about these termite invaders and find out what experts are doing to fight back.

An Assessment of the Health Risks of Seven Pesticides Used for Termite Control Committee On Toxicology, 2013-09 This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1982-01-01 edition. Excerpt: ...Symptoms of intoxication include accelerated respiration, vomiting, increased body temperature, tachycardia, neuromuscular weakness, and cardiac failure. Subchronic Exposure Several studies have reported on oral administration of pentachlorophenol for 90 d. Knudsen et al. (1974) administered pentachlorophenol in the diet to Wistar rats at 0, 25, 50, and 200 ppm (0, 1.25, 2.5, and 10 mg/kg per day, respectively). At 200 ppm, growth rate was reduced in females and liver weight was increased in males. At 50 and 200 ppm, hemoglobin was increased at 6 wk, but decreased by 11 wk. No adverse effects were observed at 25 ppm. Kimbrough and Linder (1975) gave male rats pure or technical pentachlorophenol at 1,000 ppm. Pathologic changes in the liver were observed and were of a greater magnitude with the technical sample. Sprague-Dawley rats given technical pentachlorophenol at 3 mg/kg per day had increased liver and kidney weights (Johnson

e_t _al., 1973). When the sample was purified to reduce the amount of dioxins, no effects were seen at this dosage. Chronic Exposure and Carcinogenicity The potential carcinogenicity of pentachlorophenol was studied by Innes t al. (1969) and by Schwetz e_t al. (1978). Both studies failed to reveal any increased incidence of neoplasia. In the Schwetz e_t al. (1978) study, Sprague-Dawley rats were given a pentachlorophenol sample (having a lower content of nonphenolics than does technical pentachlorophenol) in the diet at 0, 1, 3, 10, and 30 mg/kg of body weight per day; males were exposed for 22 mo, and females for 24 mo. No significant increase in tumors was observed at any dosage. No toxic effects were observed in male rats at 10 mg/kg per day or less or in females at 3 mg/kg per day or less. In the...

Urban Pest Management in Australia John Gerozisis, Phillip W. Hadlington, Ion Staunton, 2008 The first comprehensive layperson's guide to explain the latest termite detection and treatment techniques. In plain English the book tells homeowners what to look out for and how wood-eating pests are best prevented or treated. Importantly, it also explains exactly when you need a technician, what you can expect from them and how to understand

and evaluate their quote or proposal.--Provided by publisher.

Termites You Have to Want To James R. Melendez, The Book, Termites, You Have To Want To, is written by Izzy, the reformed termite and Jim. It is written in the first person by both Izzy and Jim. The purpose of this publication is to put into every-day language the challenges that termite technicians have had to endure in the treatment of structures, understanding the label and in dealing with regulatory agencies for over the past four decades. We will briefly review and discuss the different kinds of termites and their biology so as to have reference points as we journey through this publication. We will then go back in our time machine to view the early developments of our Industry and how it developed and evolved into the monster that it is now. Then we will project into the future using the past and present as our guide. The language used is not fancy or necessarily scientific, as it tends to diminish the clarity of what is being spoken. It is rather in terms understandable to the everyday reader.

Termite Karen Hartley,Chris Macro,Philip Taylor,2006 This updated edition asks some great questions. What do termites eat? Why are worker termites so busy? How do termites talk to each other? Are you brave enough to find out more about these

interesting creatures? How are they born? How do they grow, feed, move, and have babies? Where do they live and what do they look like? What makes termites special?

Subterranean Termites ,1983

Biology and Management of the Formosan Subterranean Termite and Related Species Nan-Yao Su,Chow-Yang Lee,2023-12-22 The Formosan subterranean termite, *Coptotermes formosanus*, is the most destructive and invasive termite species globally. It is also the only termite species listed in the world's 100 worst invasive alien species of the Global Invasive Species Database. Annually, its infestation costs more than \$4 billion in control and damage repairs in the USA alone. This book is the first comprehensive resource drawing on all the literature on *C. formosanus* since Tokuichi Shiraki first described the species in 1909. The book covers the worldwide distribution of this species, its biogeography, and how it has dispersed from its native range in southern China and Taiwan to different parts of the world. It describes its present taxonomic status and discusses the species' biology, ecology, foraging behavior, physiology, chemical ecology and its association with symbionts. From a practical standpoint, the authors address all of the various management options for this

species, such as baits, soil termiticides, wood preservatives, inspection and detection technologies, and Integrated Pest Management (IPM) approaches. Lastly, there are chapters dedicated to another important destructive species, *Coptotermes gestroi* (the Asian subterranean termite), and the recently discovered *C. formosanus/C. gestroi* hybrids. This important book is an essential and valuable reference for researchers, graduate students, pest management professionals, chemical manufacturer personnel, building and property managers, and others. It provides readers with a comprehensive understanding of the biology and management of the Formosan subterranean termite and the Asian subterranean termite.

A Revision of the Nearctic Termites Nathan Banks, Thomas Elliott Snyder, 1920 During recent years the damage by termites has attracted considerable attention and people like Thomas E. Banks studied the various termite forms, and their ecology, so that economic work could proceed on a firmer basis. Nathan Banks is credited with the taxonomic work and work on new species.

ACMSM25 Chien Ming Wang, Johnny C.M. Ho, Sritawat Kitipornchai, 2019-09-03 This book presents articles from The Australasian Conference on the Mechanics of Structures and

Materials (ACMSM25 held in Brisbane, December 2018), celebrating the 50th anniversary of the conference. First held in Sydney in 1967, it is one of the longest running conferences of its kind, taking place every 2–3 years in Australia or New Zealand. Bringing together international experts and leaders to disseminate recent research findings in the fields of structural mechanics, civil engineering and materials, it offers a forum for participants from around the world to review, discuss and present the latest developments in the broad discipline of mechanics and materials in civil engineering.
