An Introduction to Text Mining Gabe Ignatow, Rada Mihalcea, 2017-09-22 Students in social science courses communicate, socialize, shop, learn, and work online. When they are asked to collect data for course projects they are often drawn to social media platforms and other online sources of textual data. There are many software packages and programming languages available to help students collect data online, and there are many texts designed to help with different forms of online research, from surveys to ethnographic interviews. But there is no textbook available that teaches students how to construct a viable research project based on online sources of textual data such as newspaper archives, site user comment archives, digitized historical documents, or social media user comment archives. Gabe Ignatow and Rada F. Mihalcea's new text *An Introduction to Text Mining* will be a starting point for undergraduates and first-year graduate students interested in collecting and analyzing textual data from online sources, and will cover the most critical issues that students must take into consideration at all stages of their research projects, including: ethical and philosophical issues; issues related to research design; web scraping and crawling; strategic data selection; data sampling; use of specific text analysis methods; and report writing.

Text Processing in Python David Mertz, 2003 bull; Demonstrates how Python is the perfect language for text-processing functions. bull; Provides practical pointers and tips that emphasize efficient, flexible, and maintainable approaches to text-processing challenges. bull; Helps programmers develop solutions for dealing with the increasing amounts of data with which we are all inundated.

The Bold Dare All L. Ron Hubbard, 2014-06-23 As brash and bold and daring as Steve McQueen, Lieutenant Lee Briscoe will never back away from a good cause or good fight. And when it comes to heroism, he and McQueen are in the same band of brothers. Briscoe's gone undercover to infiltrate a slave-labor camp on an island in Southeast Asia, knowing full well that once he goes in, he may never get out. Posing as a man on the run for murder, he may soon wish he had run in the opposite direction. His adversary on the island is Schwenk—a man who is not only a connoisseur of cruelty, but an expert at delivering it. And for Briscoe, the stakes have just shot up. An innocent young woman has landed on the island and fallen into Schwenk's clutches, sold to him to do with her as he pleases. Escape is the only option . . . or both Briscoe and the girl are sure to face a fate worse than death. L. Ron Hubbard once wrote in his journal: "There must be wide spaces in which to think, strange music to hear, odd costumes to see and the elements to battle against. Money, nice cars, good food and a 'good job' mean nothing to me when compared to being able to possess the thought that there is a surprise over the horizon." Venturing toward that horizon, at age seventeen Ron set sail for the South Pacific in July 1927, and after spending time getting to know the local natives, he signed aboard a working schooner bound for China's coast. Along the way, Ron encountered many dangers lurking in the thick jungle mists—firsthand experience that contributed to stories like *The Bold Dare All*.

Black Towers to Danger L. Ron Hubbard, 2013-10-21 Drilling for oil is a dirty business, and for Bill Murphy, it's about to turn positively filthy. But Murphy's as big and tough as his home state of Texas—a man in the mold of a young John Wayne—and he's more than a match for everything the oil-rich land of Venezuela can throw at him. Everything, that is, except for one woman.... Her name is Marcia Stewart. She's fiery, she's brave, and she's beautiful ... and she'd like nothing better than to see Bill Murphy dead. Her oilman father's been killed, and Marcia tags Murphy as the murderer. Murphy's guilty of a lot of things, but murder's not one of them. He's drilling down for the truth, and now it's his land, his love for Marcia—and his life—that are on the line. With so much at stake, he'll go to any length to come out on top of the *Black Towers to Danger*. When *Black Towers to Danger* was first published in 1936, the editor wrote: "L. Ron Hubbard, as you know, is a pilot, a writer, and an engineer. The one thing he doesn't work at is engineering. He was in China at 15 and has covered a lot of territory since then. If he's on a flying field—or anywhere else—you can't miss him—he's a tall, slender chap with very fair skin and bright red hair. Something picturesque about him as there should be about a flyer." And not only was he a man with a commanding presence, so too did he have command over his material, researching the entire oil drilling process for this story. "Roars to life." —Publishers Weekly

Ole Doc Methuselah L. Ron Hubbard, 1992-01-01 If you love Star Trek, you will love Ole Doc Methuselah. He's renowned throughout the universe, a star among stars. . . Ole Doc Methuselah is his name, and saving the universe is his game. He journeys with his bag of tricks to the far corners of the cosmos, cutting out the corruption and cruelty, and containing the warped psychology plaguing mankind. So if you're looking for an adventure to remember, this is just what the doctor ordered. "Classic adventures by a classic writer." —Roger Zelazny

Multimodal Interactive Handwritten Text Transcription Veronica Romero, 2012 This book presents an interactive multimodal approach for efficient transcription of handwritten text images. This approach, rather than full automation, assists the expert in the recognition and transcription process. Until now, handwritten text recognition (HTR) systems are far from being perfect and heavy human intervention is often required to check and correct the results of such systems. The interactive scenario studied in this book combines the efficiency of automatic handwriting recognition systems with the accuracy of the experts, leading to a cost-effective perfect transcription of the handwritten text images. The interactive system here allows the user to repeatedly interact with the system. Hence, the quality and ergonomics of the interactive process is crucial for the success of the system. Moreover, more ergonomic multimodal interfaces are used to obtain an easier and more comfortable human-machine interaction.

The UNIX Text Processing System Kaare Christian, 1987-09-28 A comprehensive guide to the text editing, formatting, and document preparation tools with the UNIX operating system, from the author of the widely-used *The UNIX Operating System*. The first chapter acts as a guide to the material in the succeeding 11 chapters. Goes on to cover the UNIX system's most popular text editor: vi; how vi can be retrofitted as a rudimentary word processor for simple jobs; the standard formatters nroff and troff; and the two most popular macro packages, -ms and -mm. Also discusses eqn (the first preprocessor), an aid for typesetting mathematics; The tbl preprocessor, for typesetting tables; refer, an aid for typesetting and managing references. The UNIX system's latest preprocessor, pic, an aid for typesetting line drawings, is also explored, as well as various standard UNIX utility programs that aid document preparation.

GREP in InDesign Peter Kahrel, 2008-10-27 Updated: June 2015. Author Peter Kahrel updated this Short Cut to cover InDesign CC. Several examples have been added, and most examples are now analysed in more detail. Updated: August 2010. Author Peter Kahrel updated this Short Cut to cover InDesign CS5. Updated: November 2009. Author Peter Kahrel updated this Short Cut to address typos and reader comments. GREP (short for General Regular-Expression Print) is a powerful tool that lets you use wildcards (jokers) to search and replace text. InDesign's GREP implementation can be used for text and also for formatting codes, finding patterns in text as well as literal text. GREP moves beyond the restrictions that hampered earlier InDesign search features, but unfortunately it does have the reputation of being difficult to master. As with many things, it can be challenging to learn, but, fortunately, a lot can be done with surprisingly simple expressions. The aim of this Short Cut is to show how to create simple but powerful regular expressions.

Python 2.6 Text Processing Beginner's Guide Jeff McNeil, 2010 With a basic knowledge of Python you have the potential to undertake time-saving text processing. This book is a great introduction to the various techniques, and teaches through practical examples and clear explanations. The easiest way to learn text processing with Python Deals with the most important textual data formats you will encounter Learn to use the most popular text processing libraries available for Python Packed with examples to guide you through In Detail For programmers, working with text is not about reading their newspaper on a break; it's about taking textual data in one form and doing something to it. Extract, decrypt, parse, restructure - these are just some of the text tasks that can occupy much of a programmer's life. If this is your life, this book will make it better - a practical guide on how to do what you want with textual data in Python. *Python 2.6 Text Processing Beginner's Guide* is the easiest way to learn how to manipulate text with

Python. Packed with examples, it will teach you text processing techniques and give you the skills to work with the most popular Python libraries for transforming text from one form to another. The book gets you going with a quick look at some data formats, and installing the supporting libraries and components so that you're ready to get started. You move on to extracting text from a collection of sources and handling it using Python's built-in string functions and regular expressions. You look into processing structured text documents such as XML and HTML, JSON, and CSV. Then you progress to generating documents and creating templates. Finally you look at ways to enhance text output via a collection of third-party packages such as Nucular, PyParsing, NLTK, and Mako. Learn text processing techniques and work with the most popular Python libraries for transforming text from one form to another.

Python 2.6 Text Processing Beginners Guide Jeff McNeil,2010 This book is part of the Beginner's Guide series. Each chapter covers the steps for various tasks to process data followed by brief explanation of what is happening in each task. The explanation is followed by a few questions on the topic under discussion that will serve as a refresher course for you. This book is for people who have text in one format, and need it in another, as quickly as possible. You don't need any experience with text processing, but you will need some basic knowledge of Python.

FastText Quick Start Guide Joydeep Bhattacharjee,2018-07-26 Perform efficient fast text representation and classification with Facebook's fastText library Key Features Introduction to Facebook's fastText library for NLP Perform efficient word representations, sentence classification, vector representation Build better, more scalable solutions for text representation and classification Book Description Facebook's fastText library handles text representation and classification, used for Natural Language Processing (NLP). Most organizations have to deal with enormous amounts of text data on a daily basis, and gaining efficient data insights requires powerful NLP tools such as fastText. This book is your ideal introduction to fastText. You will learn how to create fastText models from the command line, without the need for complicated code. You will explore the algorithms that fastText is built on and how to use them for word representation and text classification. Next, you will use fastText in conjunction with other popular libraries and frameworks such as Keras, TensorFlow, and PyTorch. Finally, you will deploy fastText models to mobile devices. By the end of this book, you will have all the required knowledge to use fastText in your own applications at work or in projects. What you will learn Create models using the default command line options in fastText Understand the algorithms used in fastText to create word vectors Combine command line text transformation capabilities and the fastText library to implement a training, validation, and prediction pipeline Explore word representation and sentence classification using fastText Use Gensim and spaCy to load the vectors, transform, lemmatize, and perform other NLP tasks efficiently Develop a fastText NLP classifier using popular frameworks, such as Keras, Tensorflow, and PyTorch Who this book is for This book is for data analysts, data scientists, and machine learning developers who want to perform efficient word representation and sentence classification using Facebook's fastText library. Basic knowledge of Python programming is required.

Taming Text Grant S. Ingersoll,Thomas S. Morton,Drew Farris,2013-01-24 Summary Taming Text, winner of the 2013 Jolt Awards for Productivity, is a hands-on, example-driven guide to working with unstructured text in the context of real-world applications. This book explores how to automatically organize text using approaches such as full-text search, proper name recognition, clustering, tagging, information extraction, and summarization. The book guides you through examples illustrating each of these topics, as well as the foundations upon which they are built. About this Book There is so much text in our lives, we are practically drowningin it. Fortunately, there are innovative tools and techniquesfor managing unstructured information that can throw thesmart developer a much-needed lifeline. You'll find them in thisbook. Taming Text is a practical, example-driven guide to working withtext in real applications. This book introduces you to useful techniques like full-text search, proper name recognition,clustering, tagging, information extraction, and summarization.You'll explore real use cases as you systematically absorb thefoundations upon which they are built.Written in a clear and concise style, this book avoids jargon, explainingthe subject in terms you can understand without a backgroundin statistics or natural language processing. Examples arein Java, but the concepts can be applied in any language. Written for Java developers, the book requires no prior knowledge of GWT. Purchase of the print book comes with an offer of a free PDF, ePub, and Kindle eBook from Manning. Also available is all code from the book. Winner of 2013 Jolt Awards: The Best Books—one of five notable books every serious programmer should read. Text Mining Application Programming Manu Konchady,2006 Text mining offers a way for individuals and corporations to exploit the vast amount of information available on the Internet. Text Mining Application Programming teaches developers about the problems of managing unstructured text, and describes how to build tools for text mining using standard statistical methods from Artificial Intelligence and Operations Research. These tools can be used for a variety of fields, including law, business, and medicine. Key topics covered include, information extraction, clustering, text categorization, searching the Web, summarization, and natural language query systems. The book explains the theory behind each topic and algorithm, and then provides a practical solution implementation with which developers and students can experiment. A wide variety of code is also included for developers to build their own custom solutions. After reading through this book developers will be able to tap into the bevy information available online in ways they never thought possible and students will have a thorough understanding of the theory and practical application of text mining.
