An Index to Articles Published in The Etude Magazine, 1883-1957, Part 2 Pamela Richardson Dennis,2011-01-01 Annotation: The Index is published in two physical volumes and sold as a set for \$250.00. As America's geography and societal demands expanded, the topics in The Etude magazine (first published in 1883) took on such important issues as women in music; immigration; transportation; Native American and African American composers and their music; World War I and II; public schools; new technologies (sound recordings, radio, and television); and modern music (jazz, gospel, blues, early 20th century composers) in addition to regular book reviews, teaching advice, interviews, biographies, and advertisements. Though a valued source particularly for private music teachers, with the de-emphasis on the professional elite and the decline in salon music, the magazine ceased publication in 1957. This Index to the articles in The Etude serves as a companion to E. Douglas Bomberger's 2004 publication on the music in The Etude. Published a little over fifty years after the final issue reached the public, this Index chronicles vocal and instrumental technique, composer biographies, position openings, department store orchestras, the design of a successful music studio, how to play an accordion, recital programs in music schools, and much more. The Index is a valuable tool for research, particularly in the music culture of American in the late nineteenth and early twentieth centuries. With titles of these articles available, the doors are now open for further research in the years to come.

The Irishness of Irish Music John O'Flynn,2017-07-05 This book brings together important material from a range of sources and highlights how government organizations, musicians, academics and commercial companies are concerned with, and seek to use, a particular notion of Irish musical identity. Rooting the study in the context of the recent history of popular, traditional and classical music in Ireland, as well as providing an overview of aspects of the national field of music production and consumption, O'Flynn goes on to argue that the relationship between Irish identity and Irish music emerges as a contested site of meaning. His analysis exposes the negotiation and articulation of civic, ethnic and economic ideas within a shifting hegemony of national musical culture, and finds inconsistencies between and among symbolic constructions of Irish music and observed patterns in the domestic field. More specifically, O'Flynn illustrates how settings, genres, social groups and values can influence individual identifications or negations of Irishness in music. While the apprehension of intra-musical elements leads to perceptions of music that sounds Irish, style and authenticity emerge as critical articulatory principles in the identification of music that feels Irish. The celebratory and homogenizing discourse associated with the international success of some Irish musical forms is not

reflected in the opinions of the people interviewed by O'Flynn; at the same time, an insider/outsider dialectic of national identity is found in various forms of discourse about Irish music. Performers and composers discussed include Bill Whelan (Riverdance), Sinéad O'Connor, The Corrs, Altan, U2, Martin Hayes, Dolores Keane and Gerald Barry.

Sequential Decision-Making in Musical Intelligence Elad Liebman, 2019-10-01 Over the past 60 years, artificial intelligence has grown from an academic field of research to a ubiquitous array of tools used in everyday technology. Despite its many recent successes, certain meaningful facets of computational intelligence have yet to be thoroughly explored, such as a wide array of complex mental tasks that humans carry out easily, yet are difficult for computers to mimic. A prime example of a domain in which human intelligence thrives, but machine understanding is still fairly limited, is music. Over recent decades, many researchers have used computational tools to perform tasks like genre identification, music summarization, music database querying, and melodic segmentation. While these are all useful algorithmic solutions, we are still a long way from constructing complete music agents able to mimic (at least partially) the complexity with which humans approach music. One key aspect that hasn't been sufficiently studied is that of sequential decision-making in musical intelligence. Addressing this gap, the book focuses on two aspects of musical intelligence: music recommendation and multi-agent interaction in the context of music. Though motivated primarily by music-related tasks, and focusing largely on people's musical preferences, the work presented in this book also establishes that insights from music-specific case studies can also be applicable in other concrete social domains, such as content recommendation. Showing the generality of insights from musical data in other contexts provides evidence for the utility of music domains as testbeds for the

development of general artificial intelligence techniques. Ultimately, this thesis demonstrates the overall value of taking a sequential decision-making approach in settings previously unexplored from this perspective.
