Tropical Fruits and Other Edible Plants of the World Rolf Blancke, 2016-07-15 Tropical fruits such as banana, mango, papaya, and pineapple are familiar and treasured staples of our diets, and consequently of great commercial importance, but there are many other interesting species that are little known to inhabitants of temperate regions. What delicacies are best known only by locals? The tropical regions are home to a vast variety of edible fruits, tubers, and spices. Of the more than two thousand species that are commonly used as food in the tropics, only about forty to fifty species are well known internationally. Illustrated with high-quality photographs taken on location in the plants' natural environment, this field guide describes more than three hundred species of tropical and subtropical species of fruits, tubers, and spices. In *Tropical Fruits and Other Edible Plants of the World*, Rolf Blancke includes all the common species and features many lesser known species, including mangosteen and maca, as well as many rare species such as engkala, sundrop, and the mango plum. Some of these rare species will always remain of little importance because they need an acquired taste to enjoy them, they have too little pulp and too many seeds, or they are difficult to package and ship. Blancke highlights some fruits—the araza (*Eugenia stipitata*) and the nutritious peach palm (*Bactris gasipaes*) from the Amazon lowlands, the Brunei olive (*Canarium odontophyllum*) from Indonesia, and the remarkably tasty soursop (*Annona muricata*) from Central America—that deserve much more attention and have the potential to become commercially important in the near future. *Tropical Fruits and Other Edible Plants of the World* also features tropical plants used to produce spices, and many tropical tubers, including cassava, yam, and oca. These tubers play a vital role in human nutrition and are often foundational to the foodways of their local cultures, but they sometimes require complex preparation and are often overlooked or poorly understood distant from their home context.

Teacher Thinking in Cultural Contexts Francisco A. Rios, 1996-03-14 Francisco Rios' book sheds light on current scholarship around teacher thinking in cultural contexts and identifies promising practices that take into account context specific influences. He provides a theoretical and conceptual framework for understanding why teacher cognition as a context specific phenomenon is important, how it is studied, what can be learned, and how these learnings inform the preparation of culturally responsive educators. The contributors look at how teachers think about students of color and/or a multicultural curriculum and explore opportunities for reconstructing teacher knowledge of the cultural context. Rather than focusing on ways in which the students are deficient, or on the behavioral elements of effective teaching, this book starts with the how and what of teacher thinking as a central element in the teaching-learning relationship. It places the teacher at the center of instructional activity. While teacher thought influences what happens in instructional settings, teacher thought is also influenced by the people and activity critical to those settings.

The guide is written in a familiar style and is illustrated with distribution maps and hundreds of color photos. Accounts include beach anatomy, coastal phenomena, and shoreline animals, plants, and geology. The authors suggest a variety of beach scavenger hunts and recommend hints for beachcombing success.

And Dr. Flint's book goes beyond many works on landscape plants because of its unique focus on the landscape design process: with cross-referencing in more than two dozen categories based on such design criteria as size, site requirements, and soil prerequisites, readers will easily be able to determine which plants are appropriate to their needs. Throughout the book, a variety of illustrations provide quick reference on a range of important considerations. A full-color map represents the hardiness zones of the eastern region, and bar graphs indicate such adaptability considerations as light, wind, soil moisture, and pH requirements. For each primary species, a seasonal clock furnishes a straightforward visual delineation of the duration and intensity of color throughout the year. Encompassing plant life from herbaceous ground covers to large trees, this is a most comprehensive, easy-to-use resource for anyone involved in landscaping in eastern North America.
