**Virtual Microscopy and Virtual Slides in Teaching, Diagnosis, and Research** Robert W. Ogilvie,2005-06-22 Despite a brief history, the technologies of virtual microscopy and virtual slides have captured the imagination of many, especially this current crop of students. Having come of age in the computer and Internet age, this emerging group of technicians and researchers tends to display a distinct preference for virtual slides and virtual microscopes.

**The Virtual Microscope** ,2005 We present the design and implementation of the Virtual Microscope, a software system employing a client/server architecture to provide a realistic emulation of a high power light microscope. The system provides a form of completely digital telepathology, allowing simultaneous access to archived digital slide images by multiple clients. The main problem the system targets is storing and processing the extremely large quantities of data required to represent a collection of slides. The Virtual Microscope client software runs on the end user's PC or workstation, while database software for storing, retrieving and processing the microscope image data runs on a parallel computer or on a set of workstations at one or more potentially remote sites. We have designed and implemented two versions of the data server software. One implementation is a customization of a database system framework that is optimized for a tightly coupled parallel machine with attached local disks. The second implementation is component-based, and has been designed to accommodate access to and processing of data in a distributed, heterogeneous environment. We also have developed caching client software, implemented in Java, to achieve good response time and portability across different computer platforms. The performance results presented show that the Virtual Microscope systems scales well, so that many clients can be adequately serviced by an appropriately configured data server.

**Virtual Slide and Virtual Microscopy for Teaching, Diagnosis, and Research** Jiang Gu,Robert W. Ogilvie,2004-05-15 The first and only book covering virtual microscopy and virtual slides, presents the latest developments in this new and evolving field in pathology and morphology. The book is based on, but not limited to, the First Symposium of Virtual Slides organized at the Medical University of South Carolina, and presents an updated, comprehensive, and balanced view of the entire field. Divided into five sections, the first section gives a comprehensive introduction to computer and Internet technologies, emphasizing the disciplines of histology and pathology and reviewing telepathology. Section two covers different technological solutions to create and view virtual slides, and sections three, four and five describe applications in teaching, research, and diagnosis. An interesting read for pathologists, morphologists, histologists and microscopists.

*Virtual Microscope (2. 0) General and Organ Histology* Anatomisches Institut,2002 2 CDsMicrocopy and histology courses are an important part of medical studies, but suitable collections of specimen slides are often not available or are hard to access. In the Virtual Microscope, which simulates a real microscope, the most important slides and specimens needed in General and Organ Histology courses can be examined and studied at various magnifications on the PC. If desired, the Virtual Microscope can highlight and label the most important anatomical structures visible at a particular magnification. A quiz program allows both student and teacher to assess learning progress. The Virtual Microscope contains 41 specimens of General Histology and 118 specimens of Organ Histology.

**EUV Lithography** Vivek Bakshi,2009 Editorial Review Dr. Bakshi has compiled a thorough, clear reference text covering the important fields of EUV lithography for high-volume manufacturing. This book has resulted from his many years of experience in EUVL development and from teaching this subject to future specialists. The book proceeds from an historical perspective of EUV lithography, through source technology, optics, projection system design, mask, resist, and patterning performance, to cost of ownership. Each section contains worked examples, a comprehensive review of challenges, and relevant citations for those who wish to further investigate the subject matter. Dr. Bakshi succeeds in presenting sometimes unfamiliar material in a very clear manner. This book is also valuable as a teaching tool. It has become an instant classic and far surpasses others in the EUVL field. --Dr. Akira Endo, Chief Development Manager, Gigaphoton Inc. Description Extreme ultraviolet lithography (EUVL) is the principal lithography technology aiming to manufacture computer chips beyond the current 193-nm-based optical lithography, and recent progress has been made on several fronts: EUV light sources, optics, optics metrology, contamination control, masks and mask handling, and resists. This comprehensive volume is comprised of contributions from the world's leading EUVL researchers and provides all of the critical information needed by practitioners and those wanting an introduction to the field. Interest in EUVL technology continues to increase, and this volume provides the foundation required for understanding and applying this exciting technology. About the editor of EUV Lithography Dr. Vivek Bakshi previously served as a senior member of the technical staff at SEMATECH; he is now president of EUV Litho, Inc., in Austin, Texas.

**Technology-Enhanced Learning and the Virtual University** Michael David Sankey, Henk Huijser, Rachel Fitzgerald, 2023-10-22 Since the first works on Higher Education Administration in the 1970s no comprehensive work in terms of purpose and scope of Higher Education has been published. There have been important changes in people's aspirations vis-à-vis higher education globally. In parallel, the higher education systems, worldwide, have been undergoing constant transformation in response to these aspirations. From governments, employers and prospective students and their parents, the stakeholders in higher education system are now extremely varied paying close attention to the various aspects of higher education - from infrastructure, on-campus safety and security to administration, faculty and curricula. The present series attempts to take into account the issues of importance to all the stakeholders. Hence the series not only pays attention to the purpose and outcomes of higher education but also the economics surrounding higher education vis a vis marketization. The nitty gritty of running and maintaining a university infrastructure, impact of globalization and internationalization on delivery and demand of higher education, the commoditization of research, and changing paradigms of teaching and learning fall within the purview of the series. The increasing competition from other entities to provide degrees, certificates or other forms of credentials makes it important to have a work that brings all of the elements together to see how they actually interact and inter-relate from a systems perspective. The present series attempts to comprehensively attend to these issues and provide a complete reference resource to all those involved and interested in setting up of a Higher Education institution and its administration.
