Corporate Accounting V. LALITHA RAJASEKARAN (R.),2011 Corporate Accounting sets a new standard for the textbooks with rich pedagogy and an easy-to-understand approach that aims at equipping students with a solid grounding in the concepts in corporate accounting. The book is made up of independent chapters dealing with a particular aspect of corporate accounting. The text in each chapter is accompanied with illustrative material and many questions and problems for better grasp of the subject. It not only meets the requirements of the undergraduate students of different Indian universities but it can also be useful for the students of CA, CS, MBA and ICWA.

The Use of Palaeomagnetism and Rock Magnetism to Understand Volcanic Processes M.H. Ort,M. Porreca,J.W. Geissman,2015-04-09 This volume provides a synopsis of current research on volcanic processes, as gained through the use of palaeomagnetic and rock magnetic techniques. Thermoremanent magnetization information provides a powerful means of deciphering thermal processes in volcanic deposits, including estimating the emplacement temperature of pyroclastic deposits, which allows us to understand better the rates of

cooling during eruption and transport. Anisotropy of magnetic susceptibility and anisotropy of remanence are used primarily to investigate rock fabrics and to quantify flow dynamics in dykes, lava flows, and pyroclastic deposits, as well as identify vent locations. Rock-magnetic characteristics allow correlation of volcanic deposits, but also provide means to date volcanic deposits and to understand better their cooling history. Because lava flows are typically good recorders of past magnetic fields, data from them allow understanding of changes in geomagnetic field directions and intensity, providing clues on the origin of Earth's magnetic field.
