The Things They Carried Tim O'Brien, 2009-10-13 Look for O'Brien's new book, *American Fantastica*, on sale October 24th A classic work of American literature that has not stopped changing minds and lives since it burst onto the literary scene, *The Things They Carried* is a ground-breaking meditation on war, memory, imagination, and the redemptive power of storytelling. *The Things They Carried* depicts the men of Alpha Company: Jimmy Cross, Henry Dobbins, Rat Kiley, Mitchell Sanders, Norman Bowker, Kiowa, and the character Tim O'Brien, who has survived his tour in Vietnam to become a father and writer at the age of forty-three. Taught everywhere—from high school classrooms to graduate seminars in creative writing—it has become required reading for any American and continues to challenge readers in their perceptions of fact and fiction, war and peace, courage and fear and longing. *The Things They Carried* won France's prestigious Prix du Meilleur Livre Etranger and the Chicago Tribune Heartland Prize; it was also a finalist for the Pulitzer Prize and the National Book Critics Circle Award.

Is China Buying the World? Peter Nolan, 2013-04-30 China has become the world's second biggest economy and its largest exporter. It possesses the world's largest foreign exchange reserves and has 29 companies in the FT 500 list of the world's largest companies. 'China's Rise' preoccupies the global media, which regularly carry articles suggesting that it is using its financial resources to 'buy the world'. Is there any truth to this idea? Or is this just scaremongering by Western commentators who have little interest in a balanced presentation of China's role in the global political economy? In this short book Peter Nolan - one of the leading international experts on China and the global economy - probes behind the media rhetoric and shows that the idea that China is buying the world is a myth. Since the 1970s the global business revolution has resulted in an unprecedented degree of industrial concentration. Giant firms from high income countries with leading technologies and brands have greatly increased their investments in developing countries, with China at the forefront. Multinational companies account for over two-thirds of China's high technology output and over ninety percent of its high technology exports. Global firms are deep inside the Chinese business system and are pressing China hard to be permitted to increase their presence without restraints. By contrast, Chinese firms have a negligible presence in the high-income countries - in other words, we are 'inside them' but they are not yet 'inside us'. China's 70-odd 'national champion' firms are protected by the government through state ownership and other support measures. They are in industries such as banking, metals, mining, oil, power, construction, transport, and telecommunications, which tend to make use of high technology products rather than produce these products themselves. Their growth has been based on the rapidly growing home market. China has been unsuccessful so far in its efforts to nurture a group of globally competitive firms with leading global technologies and brands. Whether it will be successful in the future is an open question. This balanced analysis replaces rhetoric with evidence and argument. It provides a much-needed perspective on current debates about China's growing power and it will contribute to a constructive dialogue between China and the West.

Forging China's Military Might Tai Ming Cheung, 2014-02-24 "His collection of nine essays offers a comprehensive and insightful assessment of the Chinese defense science and technology (S&T)." —Pacific Affairs Among the most important issues in international security today are the nature and the global implications of China's emergence as a world-class defense technology power. Since the beginning of the twenty-first century, the Chinese defense industry has reinvented itself by emphasizing technological innovation and technology. This reinvention and its potential effects, both positive and negative, are attracting global scrutiny. Drawing insights from a range of disciplines, including history, social science, business, and strategic studies, Tai Ming Cheung and the contributors to *Forging China's Military Might* develop an analytical framework to evaluate the nature, dimensions, and spectrum of Chinese innovation in the military and broader defense spheres. *Forging China's Military Might* provides an overview of the current state of the Chinese defense industry and then focuses on subjects critical to understanding short- and long-term developments, including the relationship among defense contractors, regulators, and end-users; civil-military integration; China's defense innovation system; and China's place in the global defense economy. Case studies look in detail at the Chinese space and missile industry. "Constitutes high-quality, cutting-edge research on China's defense industries. It should enjoy broad appeal—among academics, policy makers, security analysts, and business people in countries around the world." —Andrew Scobell, RAND Corporation "Forging China's Military Might belongs in any political science shelf interested in China's issues and international security and considers the nature of China's emergence as a world power." —Midwest Book Review

Physics of Nuclei and Particles Pierre Marmier, Eric Sheldon, 2013-10-22 Physics of Nuclei and Particles, Volume II explores the prevalent descriptive methods used in nuclear and particle physics, with emphasis on the phenomenological and model-based aspects. The interactions of nuclear particles are discussed, along with nuclear forces and potentials and scattering and reaction models employed in nuclear physics. The nuclear structure and models of the nucleus are also considered. Comprised of four chapters, this volume begins with a review of the characteristics of nucleons and other particles that play a role in nuclear interaction processes in order to gain further insight into the underlying physical problems. Neutron physics, antinucleons, deuteron physics, and two-body nuclear forces are highlighted, together with three- and four- nucleon systems and heavy-ion physics. The next three chapters deal with nuclear forces and potentials, as deduced from nuclear dynamics (scattering and polarization); scattering and reaction models

used in nuclear physics; and nuclear models such as the shell model, models of deformed nuclei, and many-body self-consistent models. The book concludes with an analysis of the Brueckner-Bethe-Goldstone theory of nuclear matter. This book will be of interest to physicists.
