**Multimedia Technologies and Applications for the 21st Century** Borko Furht,1997-11-30 Multimedia Technologies and Applications for the 21st Century: Visions of World Experts presents contributions from leading researchers and experts describing their current research and their views of the future trends in the field. The book consists of thirteen chapters in five parts. These chapters tackle a number of critical issues in distributed multimedia systems and applications - from VLSI processors that support multimedia and multimedia servers, through multimedia databases and multimedia networks and communications, to merging multimedia applications. Only a few years ago multimedia seemed like a brand new research field and an emerging new industry. Today, at the edge of the 21st century, multimedia research is coming of age, and the multimedia industry has significantly grown with the total market estimated to be about \$50 billion. Several years ago it was felt that the digital media revolution had just started; however, the seeds had been sown long before. Fundamental technologies, such as interactive laser disks, video games, and electronic encyclopedias were invented in the 1970s and 80s. They represented the seeds for current 'hot' applications, such as digital libraries, video-on-demand, interactive television, and videoconferencing. Another aspect of the digital media revolution is the formation of a new media industry composed of computer, entertainment, communication, and consumer electronics companies. Many industry segments are currently involved in creating new products and services, positioning themselves for the 21st century. They include telephone, cable, and satellite TV companies, communication equipment companies, TV and radio broadcasters, on-line Internet service providers, cable channels, movie studios, record companies, book publishers, CD-ROM title creators, Internet tool vendors, multimedia software tools companies, computer companies, general software tools companies, computer add-on vendors, semiconductor vendors, and consumer electronics vendors. Multimedia Technologies and Applications for the 21st Century: Visions of World Experts should stimulate the curiosity of its readers and inspire new technological breakthroughs in this exciting field. It serves as a valuable reference for system designers, engineers, programmers, and managers who are involved in multimedia systems, the Internet, and their applications. This book can also be used as a textbook for advanced courses on multimedia in engineering curricula.

*Patent, Trademark, and Copyright Searching on the Internet* Charles C. Sharpe,2000 Searching for patent, trademark, and copyright information once meant costly and time-consuming trips to a patent and trademark depository library. Now this information can be accessed on the Internet, if the searcher knows where and how to look. This book tells you everything about how to conduct this sort of search. Sections on patents, trademark, and copyright each include definitions -- explaining what a trademark is, what can be patented, who can claim a copyright, and other important basic issues. The law regarding each area is defined and explained. Both resources and techniques for reaching them on the Internet are presented in a step-by-step format. Information on indexes and on new and helpful changes to the online patent system is included. The book has numerous appendices illustrating the types of sites the reader may encounter, and providing tips and explanations for specific kinds of searches. The text is both thorough enough for those already conversant with online searching or the legal aspects of these issues, and clear and up to date enough for the artist or inventor who simply wants to use computer technology to obtain a patent, create a trademark, or secure a copyright.

Research frontiers ofhuman-computer interaction include the desire that interac tion be more centered around human needs and capabilities, and that the human environment be considered in virtual environments and in other contextual infor mation-processing activities. The overall goal is to make users more effective in their information or communication tasks by reducing learning times, speeding performance, lowering error rates, facilitating retention and increasing subjective satisfaction. Improved designs can dramatically increase effectiveness for users, who range from novices to experts and who have diverse cultures with varying educational backgrounds. Their lives could be made more satisfying, their work safer, their learning easier and their health better.
