Game Balance Ian Schreiber, Brenda Romero, 2021-08-16 Within the field of game design, game balance can best be described as a black art. It is the process by which game designers make a game simultaneously fair for players while providing them just the right amount of difficulty to be both exciting and challenging without making the game entirely predictable. This involves a combination of mathematics, psychology, and occasionally other fields such as economics and game theory. Game Balance offers readers a dynamic look into game design and player theory. Throughout the book, relevant topics on the use of spreadsheet programs will be included in each chapter. This book therefore doubles as a useful reference on Microsoft Excel, Google Spreadsheets, and other spreadsheet programs and their uses for game designers. **FEATURES** The first and only book to explore game balance as a topic in depth Topics range from intermediate to advanced, while written in an accessible style that demystifies even the most challenging mathematical concepts to the point where a novice student of game design can understand and apply them Contains powerful spreadsheet techniques which have been tested with all major spreadsheet programs and battle-tested with real-world game design tasks Provides short-form exercises at the end of each chapter to allow for practice of the techniques discussed therein along with three long-term projects divided into parts throughout the book that involve their creation Written by award-winning designers with decades of experience in the field Ian Schreiber has been in the industry since 2000, first as a programmer and then as a game designer. He has worked on eight published game titles, training/simulation games for three Fortune 500 companies, and has advised countless student projects. He is the co-founder of Global Game Jam, the largest in-person game jam event in the world. Ian has taught game design and development courses at a variety of colleges and universities since 2006. Brenda Romero is a BAFTA award-winning game director, entrepreneur, artist, and Fulbright award recipient and is presently game director and creator of the Empire of Sin franchise. As a game director, she has worked on 50 games and contributed to many seminal titles, including the Wizardry and Jagged Alliance series and titles in the Ghost Recon, Dungeons & Dragons, and Def Jam franchises.

Combinatorial Pattern Matching Amihood Amir, Laxmi Parida, 2010-06-26 This book constitutes the refereed proceedings of the 21st Annual Symposium on Combinatorial Pattern Matching, CPM 2010, held in New York, USA, in June 2010. The 28 revised full papers presented together with 3 invited talks were carefully reviewed and selected from 53 submissions. The papers address all areas related to combinatorial pattern matching and its applications, such as searching and matching strings and more complicated patterns such as trees, regular expressions, graphs, point sets, and arrays with special focus on coding and data compression, computational biology, data mining, information retrieval, natural language processing, pattern recognition, string algorithms, string processing in databases, symbolic computing and text searching.

An Introduction to Language Description John Rhoades, 2014-06-30 This book introduces the basic systems of language, and examines how these can be investigated and described. The systems of organizing speech sounds (phonology), meaning (lexical semantics), and grammar (morphology and syntax) are described, along with methods of figuring these out for other languages. The text will foster a deep appreciation in the reader of the fact that language is patterned and that these patterns can be discovered. To this end, problems using actual language data are presented so that the reader can apply the methods described in the book. In a sense, An Introduction to Language Description is a workbook in linguistic analysis where the reader can actually get involved in dealing with language data. Suggested solutions are provided following the exercises. The book has an anthropological outlook with a focus upon usage, not correctness. Further, language structures are not presented as abstract puzzles divorced from actual human speech communication. Throughout each chapter, references are made to humans speaking and choosing among structural elements. This is designed to ground the presentation in the realities of speech; a reality that each reader shares as a language user.

Analytical Network and System Administration Mark Burgess, 2004-04-23 Network and system administration usually refers to the skill of keeping computers and networks running

properly. But in truth, the skill needed is that of managing complexity. This book describes the science behind these complex systems, independent of the actual operating systems they work on. It provides a theoretical approach to systems administration that: saves time in performing common system administration tasks. allows safe utilization of untrained and trained help in maintaining mission-critical systems. allows efficient and safe centralized network administration. Managing Human-Computer Networks: Will show how to make informed analyses and decisions about systems, how to diagnose faults and weaknesses Gives advice/guidance as to how to determine optimal policies for system management Includes exercises that illustrate the key points of the book The book provides a unique approach to an old problem and will become a classic for researchers and graduate students in Networking and Computer Science, as well as practicing system managers and system administrators.

A Fourth-Century Daoist Family Stephen R. Bokenkamp, 2020-12-15 This volume is the first in a series of full-length English translations from one of the foremost classics in Daoist religious literature, the Zhen gao or Declarations of the Perfected. The Declarations is a collection of poems, accounts of the dead, instructions, and meditation methods received by the Daoist Yang Xi (330–ca. 386 BCE) from celestial beings and shared by him with his patrons and students. These fragments of revealed material were collected and annotated by the eminent scholar and Daoist Tao Hongjing (456–536), allowing us access to these distant worlds and unfamiliar strategies of self-perfection. Bokenkamp's full translation highlights the literary nature of Daoist revelation and the place of the Declarations in the development of Chinese letters. It further details interactions with the Chinese throne and the aristocracy and demonstrates ways that Buddhist borrowings helped shape Daoism much earlier than has been assumed. This first volume also contains heretofore unrecognized reconfigurations of Buddhist myth and practice that Yang Xi introduced to his Daoist audience.

The Cavern-Mystery Transmission Charles D. Benn, 2019-03-31 Very little scholarly research has been done on the institutional structure of Taoism in medieval times. With this study of investiture, Benn attempts to fill that void. He describes the mechanism by which the Taoist priesthood ordered and perpetuated itself, as revealed in a rare account of an ordination rite for two T'ang princesses. He examines the lives of the participants, the hierarchy of the clergy, the liturgy, and the significance of the altar and its furnishings, and discusses other works of Chang Wan-fu, who authored this account.
