*Critical Approaches to Superfoods* Richard Wilk, Emma McDonell, 2020-12-10 Are superfoods just a marketing device, another label meant to attract the eye? Or do superfoods tell us a deeper story about how food and health relate in a global marketplace full of anonymous commodities? In the past decade, superfoods have taken US and European grocery stores by storm. Novel commodities like quinoa and moringa, along with familiar products such as almonds and raw milk, are now called superfoods, promising to promote health and increase our energy. While consumers may find the magic of superfoods attractive, the international development sector now envisions superfoods acting as cures to political and economic problems like poverty and malnutrition. *Critical Approaches to Superfoods* examines the politics and culture of superfoods. It demonstrates how studying superfoods can reveal shifting concepts of nutritional authority, the complexities of intellectual property and bioprospecting, the role marketing agencies play in the agro-industrial complex, and more. The multidisciplinary contributors draw their examples from settings as diverse as South India, Peru, and California to engage with foodstuffs that include quinoa, almonds, fish meal, Rooibos Tea, kale and açai.

**Functional Categories in Learner Language** Christine Dimroth, Peter Jordens, 2009-12-15 Language acquisition is a developmental process. Research on spontaneous processes of both children learning their mother tongue and adults learning a second language has shown that particular stages of acquisition can be discriminated. Initially, learner utterances can be accounted for in terms of a language system that is relatively simple. In studies on second language acquisition this learner system is called the Basic Variety (Klein and Perdue 1997). Utterance structure of the Basic Variety is determined by a grammar which consists of lexical structures that are constrained, for example, by semantic principles such as The NP-referent with highest control comes first and a pragmatic principle such as Focus expression last. At some point in acquisition this lexical-semantic system is given up in favour of a target-like system with morpho-syntactic features to express the functional properties of finiteness, topicality, the determiner system, etc. Insights into how this process evolves may also provide an answer to the question of why it takes place. Within this functional perspective on language acquisition research focuses on questions such as the following. 1. What is the driving force behind the process that causes learners to give up a simple lexical-semantic system in favour of a morpho-syntactic functional category system? 2. What is the added value of morpho-syntactic properties of inflection, word-order variation, definiteness and agreement? 3. Why is it that in cases of specific language impairment it is mainly morpho-syntactic properties of the target language that are affected?
