Chromatic Cinema Richard Misek,2010-04-26 Chromatic Cinema Color permeates film and its history, but study of its contribution to film has so far been fragmentary. Chromatic Cinema provides the first wide-ranging historical

overview of screen color, exploring the changing uses and meanings of color in moving images, from hand painting in early skirt dance films to current trends in digital color manipulation. In this richly illustrated study, Richard Misek offers both a history and a theory of screen color. He argues that cinematic color emerged from, defined itself in response to, and has evolved in symbiosis with black and white. Exploring the technological, cultural, economic, and artistic factors that have defined this evolving symbiosis, Misek provides an in-depth yet accessible account of color's spread through, and ultimate effacement of, black-and-white cinema.

Artificial Intelligence in Perspective Daniel Gureasko Bobrow, 1994 This major collection of short essays reviews the scope and progress of research in artificial intelligence over the past two decades. Seminal and most-cited papers from the journal *Artificial Intelligence* are revisited by the authors who describe how their research has been developed, both by themselves and by others, since the journal's first publication. The twenty-eight papers span a wide variety of domains, including truth maintenance systems and qualitative process theory, chemical structure analysis, diagnosis of faulty circuits, and understanding visual scenes; they also span a broad range of methodologies, from AI's mathematical foundations to systems architecture. The volume is dedicated to Allen Newell and concludes with a section of fourteen essays devoted to a retrospective on the strength and vision of his work. Convergence Media History Janet Staiger, Sabine Hake, 2009-07-01 *Convergence Media History* explores the ways that digital convergence has radically changed the field of media history. Writing media history is no longer a matter of charting the historical development of an individual medium such as film or television. Instead, now that various media from blockbuster films to everyday computer use intersect regularly via convergence, scholars must find new ways to write media history across multiple media formats. This collection of eighteen new essays by leading media historians and scholars examines the issues today in writing media history and histories. Each essay addresses a single medium—including film, television, advertising, sound recording, new media, and more—and connects that specific medium's history to larger issues for the field in writing multi-media or convergent histories. Among the volume's topics are new media technologies and their impact on traditional approaches to media history; alternative accounts of film production and exhibition, with a special emphasis on film across multiple media platforms; the changing relationships between audiences, fans, and consumers within media culture; and the globalization of our media culture.
