The Idiom Principle and L1 Influence Ying Wang, 2016-10-06 This book examines delexical verb + noun collocations such as make a decision, give rise to and take care of in Swedish and Chinese learner English. Using a methodological framework that combines learner corpus research with a contrastive perspective, the study is one of the very few in the field to incorporate corpora of the learner's L1 to investigate the effects of L1 influence. The book provides a highly detailed and multi-faceted analysis of delexical verb + noun collocations in terms of frequency of occurrence, lexical preferences and morphosyntactic patterns. Quantitative and qualitative results on overuse, underuse and errors are presented with linguistically and pedagogically relevant interpretations that include cultural and discourse aspects. More importantly, the book throws light on how L2 learners may alternate between the open-choice principle and the idiom principle as well as the extent and nature of L1 influence on their collocational use.

Idiom Treatment Experiments in Machine Translation Dimitra Anastasiou, 2010-09-13 In 1975, Searle stated that one should speak idiomatically unless there is some good reason not to do so. Fillmore, Kay, and O'Connor in 1988 defined an idiomatic expression or construction as something that a language user could fail to know while knowing everything else in the language. Our language is rich in conversational phrases, idioms,

metaphors, and general expressions used in metaphorical meaning. These idiomatic expressions pose a particular challenge for Machine Translation (MT), because their translation for the most part does not work literally, but logically. The present book shows how idiomatic expressions can be recognized and correctly translated with the help of a bilingual idiom dictionary (English-German), a monolingual (German) corpus, and morphosyntactic rules. The work focuses on the field of Example-based Machine Translation (EBMT). A theory of idiomatic expressions with their syntactic and semantic properties is provided, followed by the practical part of the book which describes how the hybrid EBMT system METIS-II is able to correctly process idiomatic expressions. A comparison of METIS-II with three commercial systems shows that idioms are not impossible to translate as it was predicted in 1952: "The only way for a machine to treat idioms is-not to have idioms!" This book furnishes plenty of examples of idiomatic phrases and provides the foundation for how MT systems can process and translate idioms by means of simple linguistic resources.

The Oxford Guide to Practical Lexicography B. T. Sue Atkins, Michael Rundell, 2008-06-19 This comprehensive introduction by two of the world's leading lexicographers presents a course in dictionary-making for publishers, colleges, and universities world-wide. The book takes readers through building a corpus, analysing the data, and writing entries. Numerous exercises show the use of software to manipulate data and compile entries.

Language Engineering for Lesser-studied Languages Sergei Nirenburg, 2009

Technologies enabling computers to process specific languages facilitate economic and political progress of societies where these languages are spoken. Development of methods and systems for language processing is therefore a worthy goal for national governments as well as for business entities and scientific and educational institutions in every country in the world. As work on systems and resources for the 'lower-density' languages becomes more widespread, an important question is how to leverage the results and experience accumulated by the field of computational linguistics for the major languages in the development of resources and systems for lower-density languages. This issue has been at the core of the NATO Advanced Studies Institute on language technologies for middle- and low-density languages held in Georgia in October 2007. This publication is a collection - of publication-oriented versions - of the lectures presented there and is a useful source of knowledge about many core facets of modern computational-linguistic work. By the same token, it can serve as a reference source for people interested in learning about strategies that are best suited for developing computational-linguistic capabilities for lesser-studied languages - either 'from scratch' or using components developed for other languages. The book should also be quite useful in teaching practical system- and resource-building topics in computational linguistics.--Site Web de l'éditeur.

PALC 2001 Barbara Lewandowska-Tomaszczyk, 2003 *PALC 2001* was the third conference of a bi-annual cycle of meetings focussing on practical applications of language corpora. The general topic of these conferences is the relationship between language corpora and their uses in a range of language and linguistic fields. Our aim is to provide a forum for practical exemplification of language corpora (written and spoken) in action and a forum for fruitful interaction between scholars. Thirty-five conference papers included in the present volume are all corpus-based. The themes cover Expert and Analytical Systems in Corpus Studies, Knowledge Extraction and Retrieval, National Corpus projects, Corpus-based Linguistic Analyses including Contrastive Studies, ESP, and corpus-based Cognitive and Discourse Analysis, Language Learning and Teaching and Learner Corpora, Translation Corpora and Translation Analysis. One section of the book includes papers from a round-table discussion on Ontologies and Language Corpora.

Advances in Artificial Intelligence Grigoris Antoniou, George Potamias, Costas Spyropoulos, Dimitris Plexousakis, 2006-05-11 This book constitutes the refereed proceedings of the 4th Hellenic Conference on Artificial Intelligence, SETN 2006, held at Heraklion, Crete, Greece in May 2006. The 43 revised full papers and extended abstracts of 34 revised short papers presented together with 2 invited contributions address many areas of artificial intelligence; particular fields of interest include: logic

programming, knowledge-based systems, intelligent information retrieval, machine learning, neural nets, genetic algorithms, and more.

Perspectives on Translation Quality Ilse Depraetere, 2012-01-01 The volume is a collection of papers that deal with the issue of translation quality from a number of perspectives. It addresses the quality of human translation and machine translation, of pragmatic and literary translation, of translations done by students and by professional translators. Quality is not merely looked at from a linguistic point of view, but the wider context of QA in the translation workflow also gets ample attention. The authors take an inductive approach: the papers are based on the analysis of translation data and/or on hands-on experience. The book provides a bird's eye view of the crucial quality issues, the close collaboration between academics and industry professionals safeguarding attention for quality in the 'real world'. For this reason, the methodological stance is likely to inspire the applied researcher. The analyses and descriptions also include best practices for translation trainers, professional translators and project managers.

Translation Engines: Techniques for Machine Translation Arturo Trujillo, 2012-12-06 Machine translation (MT) is the area of computer science and applied linguistics dealing with the translation of human languages such as English and German. MT on the Internet has become an important tool by providing fast, economical and useful translations. With globalisation and expanding trade, demand for translation is set to grow. Translation Engines

covers theoretical and practical aspects of MT, both classic and new, including: - Character sets and formatting languages - Translation memory - Linguistic and computational foundations - Basic computational linguistic techniques - Transfer and interlingua MT - Evaluation Software accompanies the text, providing readers with hands on experience of the main algorithms.

Machine Translation with Minimal Reliance on Parallel Resources George Tambouratzis, Marina Vassiliou, Sokratis Sofianopoulos, 2017-08-09 This book provides a unified view on a new methodology for Machine Translation (MT). This methodology extracts information from widely available resources (extensive monolingual corpora) while only assuming the existence of a very limited parallel corpus, thus having a unique starting point to Statistical Machine Translation (SMT). In this book, a detailed presentation of the methodology principles and system architecture is followed by a series of experiments, where the proposed system is compared to other MT systems using a set of established metrics including BLEU, NIST, Meteor and TER. Additionally, a free-to-use code is available, that allows the creation of new MT systems. The volume is addressed to both language professionals and researchers. Prerequisites for the readers are very limited and include a basic understanding of the machine translation as well as of the basic tools of natural language processing.□

English-Latvian Lexicographic Tradition Laura Karpinska, 2015-10-16 Since 1987 when the first English explanatory dictionary fully based on corpus

evidence was published, considerable changes related to the choice of lexicographic evidence have affected the field of lexicography. On this background (even though the volume of the lexicographic material is ample) the English-Latvian lexicographic tradition looks rather traditional and even somewhat stagnant. Thus, there is an urgent need for a detailed analytical inventory of English-Latvian dictionaries in order to facilitate new dictionary projects. This book provides a comprehensive survey of the development of the English-Latvian lexicographic tradition considering the various extra-linguistic factors which have influenced it. It studies the typical features of English-Latvian dictionaries traced throughout the tradition at the levels of their mega-, macro- and microstructure, pinpoints the problematic aspects of English-Latvian lexicography and offers theoretically grounded solutions for improving the quality of future English-Latvian dictionaries.

Multiword Units in Machine Translation and Translation Technology Ruslan Mitkov, Johanna Monti, Gloria Corpas Pastor, Violeta Seretan, 2018-07-15 The correct interpretation of Multiword Units (MWUs) is crucial to many applications in Natural Language Processing but is a challenging and complex task. In recent years, the computational treatment of MWUs has received considerable attention but there is much more to be done before we can claim that NLP and Machine Translation (MT) systems process MWUs successfully. This volume provides a general overview of the field with particular reference to Machine Translation and Translation Technology and focuses on languages such

as English, Basque, French, Romanian, German, Dutch and Croatian, among others. The chapters of the volume illustrate a variety of topics that address this challenge, such as the use of rule-based approaches, compound splitting techniques, MWU identification methodologies in multilingual applications, and MWU alignment issues.

Interpreting and Translation for Agri-Food Professionals in the Global Marketplace Isabel Peñuelas Gil, María Teresa Ortego Antón, 2023-12-18 In the context of an increasingly internationalized agri-food sector, this volume explores existing and new tools developed to help professionals with writing, interpreting and translating. Centered on the English-Spanish language pair, the contributions address a variety of terminology issues, the importance of intercultural understanding, the use of corpora, as well as the possibilities offered by automatic translation.

Lazuri: An Endangered Language from the Black Sea Züleyha Ünlü, Brian George Hewitt, 2023-05-09 'Lazuri: An Endangered Language of the Black Sea' is a unique source in terms of presenting a close examination of the Laz language from multiple perspectives. This volume, edited by Züleyha Ünlü, and Brian George Hewitt, examines the current status of the Laz language, Laz speakers' perceptions of ethnolinguistic vitality, the significance of the Laz language for theoretical research in linguistics, the examination of Laz lexical data from historical documents, the linguistic variation of the Laz language, the use of a Laz alphabet in literary genres, contemporary responses to preserve

the Laz language, and reflections from applied linguistics for the future of the Laz language. Focusing on the main features of the Laz language and its present situation in Turkey and in other regions as well as the attempts to revitalize Laz and Laz culture, this book will be the first scholarly publication on Laz as a South Caucasian language in terms of being a road-map for future studies.

Corpus Use in Cross-linguistic Research Marlén Izquierdo, Zuriñe Sanz-Villar, 2023-11-02 Cross-linguistic research is a fruitful field of language inquiry that has benefited enormously from the use of corpora. As sources of linguistic data of various kinds and as tools for language processing, corpora have shaped the development of cross-linguistic research, enabling both language description and practical applications. This volume contains twelve studies that emphasize the usefulness and usability of parallel corpora in accurately exploring the structure and use of seven under-researched languages and language varieties. The first part emphasizes the role of corpus-based descriptive analyses at the lexicogrammatical and discursive levels, as a first step on the way towards concrete applications like translation or language teaching. The second part focuses on the role of parallel-corpus-based language processing techniques and applications that facilitate professional communication. This book will be of interest to scholars in contrastive linguistics, translation studies, discourse analysis, language teaching, and natural language processing.

New Methods in Historical Corpora Paul Durrell, Martin Scheible, Silke Whitt, Richard J. Bennett, 2013-09-22 Investigating the history of a language depends on fragmentary sources, but electronic corpora offer the possibility of alleviating the problem of 'bad data'. But they cannot overcome it totally, and questions arise of the optimal architecture for a corpus and its representativeness of actual language use, and how a historical corpus can best be annotated to maximize its usefulness. Immense strides have been made in recent years in addressing these questions, with exciting new methods and technological advances. The papers in this volume, which were presented at a conference on New Methods in Historical Corpora (Manchester 2011), exemplify the wide range of these recent developments.

Language Shift in the Coastal Marshes of Louisiana Kevin James Rottet, 2001 Throughout the twentieth century numerous ethnic cultures and languages have been threatened by increasing globalization. French Louisiana, a vibrant and diverse region that has been culturally and linguistically distinct from its neighbors for over two centuries, has not been spared this trend. Terrebonne and Lafourche parishes, which comprise the coastal marsh area, have been described as strongholds of tradition, in which large numbers of people have continued to speak Cajun French. Yet a closer examination reveals that widespread bilingualism is drawing to a close, with very few young people able to speak French at all. This book examines the intergenerational decline of French in the coastal marsh area, including changes taking place in the

structure of the language in what appears to be its terminal phase.

Corpora and Language Learners Guy Aston,Silvia Bernardini,Dominic Stewart,2004-11-30 Corpus-aided language pedagogy is one of the central application areas of corpus methodologies, and a test bed for theories of language and learning. This volume provides an overview of current trends, offering methodological and theoretical position statements along with results from empirical studies. The relationship between corpora and learning is examined from complementary perspectives – the study of learner language, the didactic use of corpus findings, and the interaction between corpora and their users. Reflections on current theory and technology open and close the volume. With its focus on the learner and the learning setting, *Corpora and Language Learners* is addressed to corpus linguists with an interest in learner language, applied linguists wishing to expand their understanding of corpora and their pedagogic potential, and language teachers wishing to critically assess the relevance of work in this field. This volume grew out of selected presentations at the 5th Teaching and Language Corpora conference in Bertinoro, Italy.
