Treating Tourette Syndrome and Tic Disorders Douglas W. Woods, John Piacentini, John T. Walkup, 2007-01-01 Grounded in a comprehensive model of Tourette syndrome (TS) and related disorders, this state-of-the-art volume provides a multidisciplinary framework for assessment and treatment. Leading authorities present the latest knowledge on the neurobehavioral underpinnings of TS, its clinical presentation, and how to distinguish it from frequently encountered co-occurring disorders, such as obsessive-compulsive disorder and attention-deficit/hyperactivity disorder. Strategies for managing symptoms and providing effective support to children and families are thoroughly detailed, with an emphasis on integrating medication and psychosocial therapies. Several chapters also address clinical work with adults with TS. User friendly and practical, the book includes three reproducible assessment tools.

Affective Health and Masculinities in South Africa Hans Reihling, 2020-04-03
Affective Health and Masculinities in South Africa explores how different masculinities modulate substance use, interpersonal violence, suicidality, and AIDS as well as recovery cross-culturally. With a focus on three male protagonists living in very distinct urban areas of Cape Town, this comparative ethnography shows that men's struggles to become invulnerable increase vulnerability. Through an analysis of masculinities as social assemblages, the study shows how affective health problems are tied to modern individualism rather than African 'tradition' that has become a cliché in Eurocentric gender studies. Affective health is conceptualized as a balancing act between autonomy and connectivity that after colonialism and apartheid has become compromised through the imperative of self-reliance. This book provides a rare perspective on young men's vulnerability in everyday life that may affect the reader and spark discussion about how masculinities in relationships shape physical and psychological health. Moreover, it shows how men change in the face of distress in ways that may look different than global health and gender-transformative approaches envision. Thick descriptions of actual events over the life course make the study accessible to both graduate and undergraduate students in the social sciences. Contributing to current debates on mental health and masculinity, this volume will be of interest to scholars from various disciplines including anthropology, gender studies, African studies, psychology, and global health.

CRC World Dictionary of Medicinal and Poisonous Plants Umberto

Quattrocchi, 2016-04-19 Following on the successes of two previous dictionary projects, the CRC World Dictionary of Plant Names and the CRC World Dictionary of the Grasses, Umberto Quattrocchi has undertaken this dictionary of economically important plants.... He has done for these plants what was so admirably done in his other works—brought the vast and scattered literature on plant names, and in this case, too, their uses, into coherent order so that the inquisitive scholar can get a foothold. —From the Foreword, Donald H. Pfister, Harvard University and Harvard University Herbaria, Cambridge, Massachusetts The CRC World Dictionary of Medicinal and Poisonous Plants: Common Names, Scientific Names, Eponyms, Synonyms, and Etymology provides the starting point for better access to data on plants used around the world in medicine, food, and cultural practices. The material found in the five volumes has been painstakingly gathered from papers of general interest, reports and records, taxonomic revisions, field studies, herbaria and herbarium collections, notes, monographs, pamphlets, botanical literature, and literature tout court. It includes sources available at various natural history libraries, floras and standard flora works, local floras and local histories, nomenclatural histories, and the International Code of Botanical Nomenclature. Much more than a dictionary, the book provides the names of thousands of genera and species of economically important plants, concise summaries of plant properties, and appropriate observations about medicinal uses. Drawing from a tremendous range of primary and secondary sources, it is an indispensable time-saving guide for all those involved with botany, herbal medicine, pharmacognosy, toxicology, medicinal and natural product chemistry, and agriculture.

The Encyclopedia of Psychoactive Plants Christian Rätsch, 2005-04-25 The most comprehensive guide to the botany, history, distribution, and cultivation of all known psychoactive plants • Examines 414 psychoactive plants and related substances • Explores how using psychoactive plants in a culturally sanctioned context can produce important insights into the nature of reality • Contains 797 color photographs and 645 black-and-white illustrations In the traditions of every culture, plants have been highly valued for their nourishing, healing, and transformative properties. The most powerful plants--those known to transport the human mind into other dimensions of consciousness--have traditionally been regarded as sacred. In The Encyclopedia of Psychoactive Plants Christian Rätsch details the botany, history, distribution, cultivation, and preparation and dosage of more than

400 psychoactive plants. He discusses their ritual and medicinal usage, cultural artifacts made from these plants, and works of art that either represent or have been inspired by them. The author begins with 168 of the most well-known psychoactives--such as cannabis, datura, and papaver--then presents 133 lesser known substances as well as additional plants known as "legal highs," plants known only from mythological contexts and literature, and plant products that include substances such as ayahuasca, incense, and soma. The text is lavishly illustrated with 797 color photographs--many of which are from the author's extensive fieldwork around the world--showing the people, ceremonies, and art related to the ritual use of the world's sacred psychoactives.

Tyler's Honest Herbal Steven Foster, Varro E. Tyler, 1999 Researchers, get busy! and caveat emptor are the messages of this iteration (last, 1993; first, 1982) by herbalists Tyler (pharmacognosy, Purdue U.) and Foster, as they cull herbs' healing virtues from the hype. Alphabetical entries from

alfalfa to yucca provide: a brief description, proper nomenclature, plant from which derived, comments on usage, accessible discussion of the chemistry/pharmacology of its active components, evaluation of probable utility, and references. A 16-page summary chart may alone be worth the price. No illustrations, though. Annotation copyrighted by Book News, Inc., Portland, OR

The Botany and Chemistry of Hallucinogens Richard Evans Schultes, Albert Hofmann (Chemiker), 1980 By Richard Evans Schultes, Harvard University, Cambridge, Massachusetts, and Albert Hofmann, Basel, Switzerland. With Forewords by I. Newton Kugelmass and Henrich Kluver. The Second Edition of this book encompasses all of the advances that have been made in this field since publication of the original text. Newly discovered hallucinogenic plants have been incorporated into the discussions along with new information on some well-known drugs. The authors continue to focus on the botany and chemistry of hallucinogens, although they also consider ethnobotanical, historical, pharmacological and psychological aspects. Initial chapters delineate definition, botanical distribution, and structural types of hallucinogenic plants. Plants of known, possible and dubious hallucinogenic potential are then covered in separate sections. The bibliography for this new edition has been enlarged to accommodate all of the recent activity in botanical and chemical investigation of psychoactive plants. Readers will also appreciate the excellent illustrations that accompany the text.

Chinese Medicinal Plants, Herbal Drugs and Substitutes Christine Leon, Yu-Lin Lin, 2017 This is the first botanically authoritative and practical illustrated identification guide to Chinese medicinal plants and drugs and their substitutes. It offers authoritative guidance on the identification of

the herbal drugs themselves, and the plants from which they are sourced. Over the past 15 years, the authors have been collecting plant specimens throughout China, using verified species to create typical TCM reference drugs, prepared according to traditional methods. The herbal drugs included in this book are officially recognised from the Chinese materia medica (as defined in the Chinese Pharmacopoeia) and their selection has been based on those popular in international trade, as well as those recognised by the European Herbal and Traditional Medicine Practitioners Association, and those that are easily confused, substituted or adulterated with other plants.
