Police Violence William A. Geller,Hans Toch,1959-12-11 Although the prevalence of police-citizen

conflict has diminished in recent decades, police use of excessive force remains a concern of police departments nationwide. This timely book focuses on what is known and what still needs to be learned to understand, prevent, and remediate police abuse of force. The topics covered include: a theory of police abuse of force; the causes of police brutality; measures of its prevalence; the violence-prone police officer; public opinion about police abuse of force; the issue of race; officer selection, training, and attitudes; police unions and police culture; administrative review; procedural justice and the review of citizen complaints; the role of lawsuits; and a survey of police brutality abroad. In the final chapter Geller and Toch suggest new directions for research and practical innovations in law enforcement, from which both police and citizens can benefit. The contributors to this volume are scholars of criminology, criminal justice, social psychology, law, and public administration; former police managers; a police union leader; civilian oversight agency administrators and analysts; civil liberties advocates; police litigation expert witnesses; and media commentators. The combination of theoretical and practical perspectives makes this book ideal for students and scholars of democratic policing and for those in police departments, government, and the media charged with addressing and understanding the problem of improper exercise of force.

Effective Instruction Tamar Levin, Ruth Long, 1981 The purpose of this book is to share successful instructional and learning processes with educators. The focus is on three types of variables in classroom learning and instruction: (1) active learning time; (2) feedback and corrective procedures; and (3) instructional cues. The literature on the nature of each variable is discussed, and the conditions for successful implementation, the reasons for their powerful effects on learning, and the different ways they can be used are outlined. A section on evaluating instruction examines the roles of classroom observation, rating scales, student questionnaires, content analysis and techniques for self examination. A review of the implications arising from new demands on the educational system cites the classroom climate and the concept of individual differences as major areas that need research. An annotated bibliography of research articles written since 1960 emphasizes the feasibility of implementing the ideas discussed in the book. (FG)
