U.S. Navy Submarine Torpedo Mark 16 Mod 8 Handbook United States Navy,2010-10 A redesign of the U.S. Navy's successful Mark 14 torpedo, the Mark 16 was developed during WWII but not available until early 1945 and never saw combat. The Mark 16's design incorporated the best aspects of the Mark 14, and some features of German torpedoes. During twenty years of the Cold War, the Mark 16 served as the Silent Service's standard anti-ship weapon. The Mark 16 was powered by a Naval hydrogen-peroxide and alcohol engine. The warhead carried 732 pounds of HBX-3 Torpex explosive, making it the most powerful non-nuclear torpedo in the U.S. arsenal. Launched from a depth between 10 and 200 feet, the torpedo had a running depth between 10 and 50 feet. It weighed 3782 pounds in war-shot configuration, and was 246 inches in length and 21 inches in diameter. This handbook was created to train torpedomen about the use, maintenance, and handling of the Mark 16. It provides an unprecedented look at the most deadly conventional weapon in the submarine's arsenal. Originally confidential, this handbook is now considered obsolete, and no longer classified.

Living with the Torpedo: Anti-Submarine Warfare, Command, and Shipboard Life in the US Navy During World War II George P. Sotos Usn, 2020-02-19 Living with the Torpedo is the only World War II memoir written by a US Navy officer who fought the years-long Battle of the Atlantic against Hitler's U-boats from the decks of a destroyer escort and PC boats. More than seven decades later, George Sotos still dreams the sounds and emotions of his years living with the torpedo threat. In this captivating book, he tells you what that time was like, and how the human element formed the foundation of successful American submarine hunting during the war. More than a mere recounting of events, Living with the Torpedo brings to life the tactics, procedures, people, and feeling of small-ship action against a determined and capable adversary. Readers will marvel at the transformation, in less than five years, of a college senior who had never seen the ocean into a task-unit commander in control of three combat-tested warships -- a progression unlikely to be repeated in a modern navy.

Iron Men and Tin Fish Anthony Newpower, 2006-08-30 From the American entry into World War II until September 1943, U.S. submarines experienced an abnormally high number of torpedo failures. These failures resulted from three defects present in the primary torpedo of the day, the Mark XIV.

These defects were a tendency to run deeper than the set depth, the frequent premature detonation of the Mark 6 magnetic influence exploder, and the failure of the contact exploder when hitting a target at the textbook ninety-degree angle. Ironically, despite using a completely independent design, the Germans experienced the same three defects. The Germans, however, fixed their defects in six months, while it took the Americans twenty-two months. Much of the delay on the American side resulted from the denial of senior leaders in the operational forces and in the Navy's Bureau of Ordnance (BuOrd) that the torpedo itself was defective. Instead, they blamed crews for poor marksmanship or lack of training. In the end, however, the submarine force itself overcame the bureaucratic inertia and correctly identified and fixed the three problems on their own, proving once again the industry of the average American soldier or sailor. From the American entry into World War II until September 1943, U.S. submarines experienced an abnormally high number of torpedo failures. These failures resulted from three defects present in the primary torpedo of the day, the Mark XIV. These defects were a tendency to run deeper than the set depth, the frequent premature detonation of the magnetic influence exploder, and the failure of the contact exploder when hitting a target at the textbook 90-degree angle. Ironically, despite using a completely independent design, the Germans experienced the same three defects. The Germans, however, fixed their defects in six months, while it took the Americans 22 months. Much of the delay on the American side resulted from the denial of senior leaders in the operational forces and in the Navy's Bureau of Ordnance (BuOrd) that the torpedo itself was defective. Instead, they blamed crews for poor marksmanship or lack of training. In the end, however, the submarine force itself overcame the bureaucratic inertia and correctly identified and fixed the three problems on their own, proving once again the industry of the average American soldier or sailor. Contrary to the interpretations of most submarine historians, this

book concludes that BuOrd did not sit idly by while torpedoes failed on patrol after patrol. BuOrd acknowledged problems from early in the war, but their processes and their tunnel vision prevented them from realizing that the weapon sent to the fleet was grossly defective. One of World War II's forgotten heroes, Admiral Lockwood drove the process for finding and fixing the three major defects. This is first book that deals exclusively with the torpedo problem, building its case out of original research from the archives of the Bureau of Ordnance, the Chief of Naval Operations, Vice Admiral Lockwood's personal correspondence, and records from the British Admiralty at the National Archives of the United Kingdom. These sources are complemented by correspondence and interviews with men who actually participated in the events.
