**New Urban Housing** Hilary French,2006-01-01 A timely investigation of the most innovative recent urban housing constructions The design of high-density housing is inextricably linked to the growth of towns and cities: as urban centers have increased in both geographical size and density, housing has had to be provided to accommodate the numbers and needs of the population. Whether highly visible or merged with the existing cityscape, a vast proportion of the fabric of any city is made up of residential space. New Urban Housing looks at a selection of some of the most inventive contemporary projects built in countries around the world. Author Hilary French provides a comprehensive introduction to this building type, from its industrial beginnings in London and Paris to New York City's Lower East Side and the 20th-century designs of Le Corbusier, Antonio Sant'Elia, and Mies van der Rohe. Lavishly illustrated, the book examines different formal typologies of urban housing: terrace and row houses, quadrangles and courtyards, city blocks and infill (or renovated and reused sites), and towers and slab blocks. Thirty-six case studies from fourteen countries are presented by architects including Steven Holl, Richard Meier, KoningEizenbergArchitecture, Eduardo Souto de Moura, and Renzo Piano. Each is illustrated in full color and is accompanied by detailed plans and sections that discuss the needs of the site and place the project in its surrounding context. New Urban Housing features these buildings and more: - Contemporaine, Chicago - Donnybrook Quarter, London - Harold Way Apartments, Hollywood - Mondrian Apartments, Sydney - Simmons Hall, MIT, Cambridge, MA - Yerba Buena Lofts, San Francisco

**Energy Performance and Indoor Climate Analysis in Buildings** Jarek Kurnitski,Andrea Ferrantelli,Martin Thalfeldt,2019-11-21 HVAC systems, load shifting, indoor climate, and energy and ventilation performance analyses are the key topics when improving energy performance in new and renovated buildings. This development has been boosted by the recently established nearly zero energy building requirements that will soon be in use in all EU Member States, as well as similar long-term zero energy building targets in Japan, the US, and other countries. The research covered in this Special Issue provides evidence of how new technical solutions have worked, in practice, in new or renovated buildings, and also discusses problems and how solutions should be further developed. Another focus is on the more detailed calculation methods needed for the correct design and sizing of dedicated systems, and for accurate quantification of energy savings. Occupant behavior and building operation is also examined, in order to avoid common performance gaps between calculated and measured performance. These topics demonstrate the challenge of high performance buildings as, in the end, comfortable buildings with good indoor climate which are easy and cheap to operate and maintain are expected by end customers. Ventilation performance, heating and cooling, sizing, energy predictions and optimization, load shifting, and field studies are some of the key topics in this Special Issue, contributing to the future of high performance buildings with reliable operation.

**Building Economics** Ivor H. Seeley,1996-11-11 This comprehensively rewritten, updated and extended new edition of this established text focuses on what has become the most important single facet of the quantity surveyor's role - cost management. The scope of the book has been broadened to take account of the widening and more sophisticated cost management and control service that clients now require. The book examines the factors influencing building costs and how the precontract costs can be estimated, analysed and controlled, to ensure that buildings can be completed within the agreed budget and timescale, and be of acceptable quality, function effectively and provide value for money. A new chapter on value management has been added, together with an introductory chapter on cost modelling; the chapter on life cycling costing is extended, while the sections on energy conservation and occupancy costs are expanded. Throughout the text many new case studies, with supporting tables and diagrams, are included in order to enhance the value of this book to the student and the practitioner.

Constructing a Consumer-Focused Industry David Oswald,Trivess Moore,2022-06-09 The old saying 'safe as houses' is being challenged around the world like never before. Over recent decades homeowners have experienced the devastating effects of defects like asbestos, leaky buildings, structural failings, and more recently the combustible cladding crisis. The provision of safe and secure housing is a critical starting point to ensure that social value can be delivered in the built environment. However, some of these dangerous defects have resulted in a lack of security, safety, health, well-being, and social value for households and the wider community. The problems homeowners experience go beyond the substantial financial costs for defect rectification. Too often there has been a lack of government and industry support to help the housing consumer through these issues or to prevent them from occurring to begin with. It is time for a rethink and restructure of government policy, support, and industry practices to better protect housing consumers and deliver high-quality and sustainable housing that creates social value. Through evidence-based research and international case studies, this book focuses on the effects that dangerous defects have on the housing consumer. The ongoing construction cladding crisis is used as a primary case study throughout to highlight these implications, with other previous large-scale defect examples, such as leaky buildings and asbestos. Based upon the range of emerging evidence, we propose ideas for policy makers, construction and built environment professionals, owners corporations, and households on how to move forward towards a higher-quality, sustainable, and socially valuable way of residential living. Government policy has long focused on 'making industry work' through building regulations and standards. It is now time for greater government and industry focus on the consumer to make 'consumer protection work' in the built environment. There is a need to prevent dangerous defects like combustible cladding, better support consumers when defects emerge, and to create buildings for social value rather than minimum standards. Now is the time to build a better future for the end-user.

**A People's History of London** Lindsey German,John Rees,2012-06-19 In the eyes of Britain's heritage industry, London is the traditional home of empire, monarchy and power, an urban wonderland for the privileged, where the vast majority of Londoners feature only to applaud in the background. Yet, for nearly 2000 years, the city has been a breeding ground for radical ideas, home to thinkers, heretics and rebels from John Wycliffe to Karl Marx. It has been the site of sometimes violent clashes that changed the course of history: the Levellers' doomed struggle for liberty in the

aftermath of the Civil War; the silk weavers, match girls and dockers who crusaded for workers’ rights; and the Battle of Cable Street, where East Enders took on Oswald Mosley’s Black Shirts. A People’s History of London journeys to a city of pamphleteers, agitators, exiles and revolutionaries, where millions of people have struggled in obscurity to secure a better future.

**Shelter is not enough** Towers, Graham,2000-03-29 Estates of multi-storey housing present some of the most intractable problems for urban policy. Many attempts to deal with these problems have either failed or presented poor value for money. Shelter is not enough is an up-to-date evaluation of the issues. It traces the development of multi-storey housing in Britain from its early beginnings, to the period from the mid-1950s to the early 1970s when most of the contemporary legacy of estates was built. The problems in use are examined as are the responses of the authorities faced with mounting technical and social difficulties. Drawing on an analysis of past practice, a 'model framework' is defined which can help to create successful approaches for the regeneration of multi-storey housing. From the experience of the development of multi-storey housing in Britain, its problems and attempted solutions, implications are drawn for public policy, and a strategic approach is outlined which can reform the estates and reintegrate them into the mainstream urban environment. Finally, the British experience is placed in a broader context - the parallel problems surrounding multi-storey estates in Europe, and the contribution transformed multi-storey estates might make in creating more sustainable cities in the millennium. This book provides valuable information for all those involved in urban regeneration - academics and students of housing, architecture and urban studies; development officers, designers and others working in the practice of estate regeneration.
