Stacking the Deck Bryan Berg,2009-12-15 Written by the holder of several Guinness World Records for cardstacking, this is the first complete, fully illustrated guide to the art of building mind-boggling, multilevel structures with ordinary playing cards. In *Stacking the Deck*, Bryan Berg reveals the secret to successful cardstacking with his simple four-card-cell structure and expanded grid techniques. Using illustrations and step-by-step instructions, he guides readers on to more elaborate -- and incredibly strong -- creations. He covers a wide range of architectural styles, from classic to whimsical, and various types of structures, including pyramids, shrines, stadiums, churches, an oil derrick, and even the Empire State Building. Since first setting the height record in 1992, Bryan's built awe-inspiring card models of a Japanese shrine, the Iowa State Capitol building, Ebbets Field, and his latest tower, which is more than twenty-five feet tall! This book includes photographs of some of these amazing pieces, illustrating just how appealing and enduring a house of cards can be. *Stacking the Deck* will inspire everyone from youngsters experimenting with their first deck of cards to adults, who can create their own private skyscrapers. Once you've read *Stacking the Deck*, you'll never look at a deck of cards the same way again.

Learning and Teaching Early Math Douglas H. Clements, Julie Sarama, 2020-12-29 The third edition of this significant and groundbreaking book summarizes current research into how young children learn mathematics and how best to develop foundational knowledge to realize more effective teaching. Using straightforward, practical language, early math experts Douglas Clements and Julie Sarama show how learning trajectories help teachers understand children's level of mathematical understanding and lead to better teaching. By focusing on the inherent delight and curiosity behind young children's mathematical reasoning, learning trajectories ultimately make teaching more joyous: helping teachers understand the varying levels of knowledge exhibited by individual students, it allows them to better meet the learning needs of all children. This thoroughly revised and contemporary third edition of Learning and Teaching Early Math remains the definitive, research-based resource to help teachers understand the learning trajectories of early mathematics and become confident, credible professionals. The new edition draws on numerous new research studies, offers expanded international examples, and includes updated illustrations throughout. This new edition is closely linked with Learning and Teaching with Learning Trajectories—[LT]2—an open-access, web-based tool for early childhood educators to learn about how children think and learn about mathematics. Head to LearningTrajectories.org for ongoing updates, interactive games, and practical tools that support classroom learning.

Things to Make and Do in the Fourth Dimension Matt Parker, 2014-12-02 A book from the stand-up mathematician that makes math fun again! Math is boring, says the mathematician and comedian Matt Parker. Part of the problem may be the way the subject is taught, but it's also true that we all, to a greater or lesser extent, find math difficult and counterintuitive. This counterintuitiveness is actually part of the point, argues Parker: the extraordinary thing about math is that it allows us to access logic and ideas beyond what our brains can instinctively do—through its logical tools we are able to reach beyond our innate abilities and grasp more and more abstract concepts. In the absorbing and exhilarating Things to Make and Do in the Fourth Dimension, Parker sets out to convince his readers to revisit the very math that put them off the subject as fourteen-year-olds. Starting with the foundations of math familiar from school (numbers, geometry, and algebra), he reveals how it is possible to climb all the way up to the topology and to four-dimensional shapes, and from there to infinity—and slightly beyond. Both

playful and sophisticated, *Things to Make and Do in the Fourth Dimension* is filled with captivating games and puzzles, a buffet of optional hands-on activities that entices us to take pleasure in math that is normally only available to those studying at a university level. *Things to Make and Do in the Fourth Dimension* invites us to re-learn much of what we missed in school and, this time, to be utterly enthralled by it.

Tarot: Temple of Paper, House of Cards Carlos Escobel, 2019-07-28 Tarot: Temple of Paper, House of Cards breaks new ground in the study of the Tarot. The primary goal of this book is not to provide a user manual or card interpretation guide. Nor is it an argument for any one school of thought in regards to the cards, their origin or intended use. Instead, the purpose is to help beginners and adepts alike appreciate the never yet ever changing Tarot in a genuinely new way. The thought exercise that creates this lens through which to understand the heart of the art includes techniques for internalizing the cards, their combinations and overlooked complexities in an immersive manner. These do not compete with prevalent methods but only enhance them. The Tarot is different things to different people. It has survived, and thrived through more than six hundred years of use because of its elastic evolution. This book encapsulates what it was and what it is while still adding to the methods available for its users. Additionally, new research is offered that is sure to surprise even those already well-read on the subject. And speaking of that subject, the practice of Tarot is fascinating on multiple levels including the historic, artistic, folkloric, psychological and spiritual. All of those and more are touched on in a work meant to revitalize not the Tarot itself, but the ways in which we can better understand and make use of it.

Abacus Ruth Merttens, David Kirkby, 1999 Aimed at pupils who are struggling with basic number work, this book is divided into maths skills. Each section provides alternative teaching strategies and practical techniques. Straightforward practical activities are suitable for a individual or group work.
