The Grammar of Technology Development Hiroe Tsubaki,Ken Nishina,Shu Yamada,2008-04-09 This book includes the keynote lecture and fourteen selected papers that - scribe a general guideline and supporting concepts and tools for conceiving technology development as a grammar. Recent advances in scienti?c and - gineering ?elds call for new disciplines, tools, and concepts. For example, advances in computer simulation require new approaches to statistical te- niques to utilize computer simulation e?ciently for technology development. practicalrequirements.Theeditorsarecon?dentthiscollectionwillcontribute to the acceleration of technology development through the application of the grammar of technology presented here. The title of this book is in?uenced by Karl Pearson's book The Grammar of Science, published in 1892, which brought him recognition as a giant and pioneer of statistics. His book introduced a grammar of science with a - scription of the roles of statistical treatments. While science at times has been misunderstood as not being amenable to a standardized approach, one of the contributions of Pearson's book was that it o?ered a standardized - proach to science. As his book demonstrated, behind the great innovations of science, there exists a universal approach.

Performance Evaluation for Network Services, Systems and Protocols Stênio Fernandes,2017-03-21 This book provides a comprehensive view of the methods and approaches for performance evaluation of computer networks. It offers a clear and logical introduction to the topic, covering both fundamental concepts and practical aspects. It enables the reader to answer a series of questions regarding performance evaluation in modern computer networking scenarios, such as 'What, where, and when to measure?', 'Which time scale is more appropriate for a particular measurement and analysis?', 'Experimentation, simulation or emulation? Why?', and 'How do I best design a sound performance evaluation plan?'. The book includes concrete examples and applications in the important aspects of experimentation, simulation and emulation, and analytical modeling, with strong support from the scientific literature. It enables the identification of common shortcomings and highlights where students, researchers, and engineers should focus to conduct sound performance evaluation. This book is a useful guide to advanced undergraduates and graduate students, network engineers, and researchers who plan and design proper performance evaluation of computer networks and services. Previous knowledge of computer networks concepts, mechanisms, and

Theory and Engineering of Complex Systems and Dependability Wojciech Zamojski,Jacek Mazurkiewicz,Jarosław Sugier,Tomasz Walkowiak,Janusz Kacprzyk,2015-06-14 Building upon a long tradition of scientifi c conferences dealing with problems of reliability in technical systems, in 2006 Department of Computer Engineering at Wrocław University of Technology established DepCoS-RELCOMEX series of events in order to promote a comprehensive approach to evaluation of system performability which is now commonly called dependability. Contemporary complex systems integrate variety of technical, information, soft ware and human (users, administrators and management) resources. Their complexity comes not only from involved technical and organizational structures but mainly from complexity of information processes that must be implemented in specific operational environment (data processing, monitoring, management, etc.). In such a case traditional methods of reliability evaluation focused mainly on technical levels are insufficient and more innovative, multidisciplinary methods of dependability analysis must be applied. Selection of submissions for

these proceedings exemplify diversity of topics that must be included in such analyses: tools, methodologies and standards for modelling, design and simulation of the systems, security and confidentiality in information processing, specific issues of heterogeneous, today often wireless, computer networks, or management of transportation networks. In addition, this edition of the conference hosted the 5th CrISS-DESSERT Workshop devoted to the problems of security and safety in critical information systems.
