Jak-Stat Signaling : From Basics to Disease Thomas Decker, Mathias Müller, 2012-06-06 JAK tyrosine kinases and STAT transcription factors constitute a signaling pathway, which is activated by cytokines. By activating gene transcription it regulates essential biological responses to environmental cues. The Jak-Stat pathway is involved in the regulation of cell development, differentiation, proliferation and apoptosis. Improper function may contribute to hematopoietic malignancies and cancer. This book provides comprehensive insights into the latest basic and clinical developments in the field. The first part reviews recent findings and new technologies pertaining to basics of Jak-Stat function. The second part describes the evolution of Jak-Stat signaling and the role of the pathway in invertebrate organisms. The third part focuses on Jak-Stat signaling in hematopoietic cells under both physiological and pathophysiological conditions. Finally, chapters in the fourth section describe the relationship of Jak-Stat signaling to various states of disease, particularly infection, leukemias and solid cancers. The book is intended for all scientists in molecular biology, biochemistry and cell biology dealing with biomedical issues.

Regulation of Human T Helper Cell Differentiation Michael Thomas Wong, 2011 Naïve CD4+ T cells are precursor cells that differentiate into distinct lineages of T helper (TH) cells upon cellular activation. The work presented here describe how we identified the soluble factors required for the differentiation of human TH17 and TH9 cells, which are two novel TH subsets implicated in the

pathogenesis of various autoimmune and allergic disorders, respectively. We also performed functional analysis with human TH1, TH2 and TH17 cells, demonstrating that different TH cells drive monocytes to differentiate into specialized DC subsets. Collectively, we believe that these data have significant implications for the treatment of inflammatory disorders. In order to determine the factors that drive human TH17 differentiation, we hypothesized that a subset of TLR ligands could induce PBMCs to secrete TH17-polarizing factors. We identified that conditioned media from TLR4- and TLR8/7-stimulated cultures could promote IL-17 production. Using a proteomics screening approach, we demonstrated that a combination of pro-inflammatory cytokines synergistically promote human TH17 differentiation. TH17-polarizing cytokines upregulated the expression of the transcription factor ROR[Gamma]t and drove the expansion of memory TH17 and TH1/17 cells. The data presented in Chapter 2 indicate that the pathways driving murine and human TH17 responses are quite different, which may diminish the value of various mouse studies in the treatment of TH17-driven diseases. In collaboration with the laboratory of Edgar Engleman, we demonstrate that TH cells mediate the differentiation of monocytes into distinct DCs. Importantly, TH17 cells drive the formation of TH17-promoting DCs (DCTh17), whereas TH1 and TH2 cells drive the formation of TH1- and TH2-promoting DCs (DCTh1 and DCTh2), respectively. Blocking the TH1 cytokine IFN-[Gamma] inhibited DCTh1 formation, whereas neutralizing the TH2 cytokines IL-4 and IL-13 inhibited DCTh2 formation. Studies of psoriasis and atopic dermatitis skin lesions indicate that TH cells are closely associated with monocytes and DCs in situ, suggesting that this pathway contributes to disease pathogenesis. These data illustrate a positive feedback loop between TH cells, monocytes and DCs that may contribute to the ongoing inflammation observed in various autoimmune and allergic disorders. In Chapter 4, the factors that promote human TH9 differentiation are characterized, and we provide evidence that IL-21 is a potent enhancer of IL-9 secretion. TH9 cells generated in vitro exhibit a heterogeneous phenotype based on the expression of the transcription factors GATA-3 and Foxp3. Finally, a small population of memory CD4+ T cells cultured under TH17-polarizing conditions secreted IL-9, IL-17 and IFN-[Gamma], suggesting considerable lineage plasticity among human TH cells. Taken together, these data indicate a complex cytokine network in the regulation of human TH17 and TH9 cells.

Transcriptional Control of Lineage Differentiation in Immune Cells Wilfried Ellmeier, Ichiro Taniuchi, 2014-09-02 Insights into the regulation of immune cell lineage differentiation and specification as well as into the control of lineage integrity, stability and plasticity are of fundamental importance to understanding innate and adaptive immune responses. In this volume, leading experts provide an up-to-date and comprehensive overview of recent advances in the transcriptional control mechanisms and transcription factor networks that regulate these processes in a variety of different immune cell lineages. The chapters cover the regulation of T versus B cell lineage choice, discuss early B cell development and pre-B cell leukemia prevention, address transcriptional control mechanisms during the differentiation, in regulatory T cells and iNKT cells, detail genomic switches in helper cell fate choice and plasticity and highlight the role of the BTB-zinc finger family of transcription factors in T cells. Moreover, the chapters discuss transcriptional networks in DCs, NK cells and in innate lymphoid cells. Together, the reviews illustrate key transcriptional control mechanisms that regulate the development and function of immune cells and demonstrate the impressive advances made over the last decade.

Interleukin-10 in Health and Disease Simon Fillatreau, Anne O'Garra, 2014-07-08 This volume provides a set of reviews dedicated to the biology of Interleukin (IL)-10. It includes chapters on its importance for maintaining immune homeostasis in humans, its role in intestinal immunity and its functions during viral and bacterial infections. In addition, it presents reviews on the mechanisms linking innate microbial recognition to the production of IL-10 and on how IL-10 recognition by its receptor functions. The roles of T and B cells as relevant sources of IL-10 are also discussed, with an emphasis on the clinical opportunities offered by IL-10-producing Tr1 cells for the suppression of unwanted immunity. Finally, the functions of other cytokines of the IL-10 family are presented. Collectively, these articles provide a comprehensive overview of our current knowledge on one of the most important anti-inflammatory cytokines known to date.

Oral Inflammations and Systemic Diseases Ghazal Aarabi ,Udo Sedorf,2020-12-29 The book presents a collection of 10 articles published in a Special Issue entitled Oral Inflammations and Systemic Diseases in the International Journal of Molecular Sciences (ISSN 1422-0067) in the section Molecular Pathology, Diagnostics, and Therapeutics. The oral inflammations that are covered in this issue consist of dental caries, periodontitis, and gingivitis, with a preponderance of periodontitis. Periodontitis is clearly a bacterial disease; however, it is not an infectious disease in the classical sense because it results from complex interactions between the commensal microbiota, host susceptibility and environmental factors such as diet and smoking. The human mouth contains one of the most diverse microbiomes in the human body, comprising viruses, fungi, protozoa, archaea and bacteria. The peer-reviewed articles of the book consist of original and review papers focused on the question of how exposure of the mouth to specific oral microbiota impacts systemic diseases, such as neuroinflammation, atherosclerosis, diabetes, and arthritis.

Lymph Node T Cell Dynamics and Novel Strategies for HIV Cure Constantinos Petrovas,Vijayakumar Velu,2019-02-11 Currently, more than 36 million people are infected with HIV. Although the introduction of highly active anti-retroviral therapy (HAART) has led to substantial advances in the clinical management of HIV infected individuals, HAART cannot completely eliminate the virus. This is because CD4 T helper cells, harboring the virus, remain dormant reservoirs. These reservoirs are difficult to measure and are present even in HAART-treated HIV infected individuals with undetectable levels of HIV in the blood. A growing body of studies has revealed follicular helper (Tfh) CD4 T cells, a highly differentiated CD4 T cell population localized in immunologically sanctuary sites (follicle/germinal center), as a major reservoir of HIV. The present *Frontiers in Immunology* eBook compiles 16 timely review articles focusing on the dynamics of major follicular immune cell types in HIV/SIV infection and their potential role for disease pathogenesis and the viral persistence in the lymph node. This eBook provides a comprehensive presentation of recent published work on lymph node and especially Tfh cell dynamics in HIV infection and we hope that it will be useful for our further understanding of how such dynamics affect the interplay between virus and host as well as for the discovery of novel therapeutic targets in the fight against HIV.
