Camera Trapping Peter Fleming,Paul Meek,Guy Ballard,Peter Banks,Andrew Claridge,Jim Sanderson,Don Swann,2014-11-20 Camera trapping in wildlife management and research is a growing global phenomenon. The technology is advancing very quickly, providing unique opportunities for collecting new biological knowledge. In order for fellow camera trap researchers and managers to share their knowledge and experience, the First International Camera Trapping Colloquium in Wildlife Management and Research was held in Sydney, Australia. Camera Trapping brings together papers from a selection of the presentations at the colloquium and provides a benchmark of the international developments and uses of camera traps for monitoring wildlife for research and management. Four major themes are presented: case studies demonstrating camera trapping for monitoring; the constraints and pitfalls of camera technologies; design standards and protocols for camera trapping surveys; and the identification, management and analyses of the myriad images that derive from camera trapping studies. The final chapter provides future directions for research using camera traps. Remarkable photographs are included, showing interesting, enlightening and entertaining images of animals 'doing their thing'.

Social Self-Organization Dirk Helbing,2012-05-05 What are the principles that keep our society together? This question is even more difficult to answer than the long-standing question, what are the forces that keep our world together. However, the social challenges of humanity in the 21st century ranging from the financial crises to the impacts of globalization, require us to make fast progress in our understanding of how society works, and how our future can be managed in a resilient and sustainable way. This book can present only a few very first steps towards this ambitious goal. However, based on simple models of social interactions, one can already gain some surprising insights into the social, ``macro-level'' outcomes and dynamics that is implied by individual, ``micro-level'' interactions. Depending on the nature of these interactions, they may imply the spontaneous formation of social conventions or the birth of social cooperation, but also their sudden breakdown. This can end in deadly crowd disasters or tragedies of the commons (such as financial crises or environmental destruction). Furthermore, we demonstrate that classical modeling approaches (such as representative agent models) do not provide a sufficient understanding of the self-organization in social systems resulting from individual interactions. The consideration of randomness, spatial or network interdependencies, and nonlinear feedback effects turns out to be crucial to get fundamental insights into how social patterns and dynamics emerge. Given the explanation of sometimes counter-intuitive phenomena resulting from these features and their combination, our evolutionary modeling approach appears to be powerful and insightful. The chapters of this book range from a discussion of the modeling strategy for socio-economic systems over experimental issues up the right way of doing agent-based modeling. We furthermore discuss applications ranging from pedestrian and crowd dynamics over opinion formation, coordination, and cooperation up to conflict, and also address the response to information, issues of systemic risks in society and economics, and new approaches to manage complexity in socio-economic systems. Selected parts of this book had been previously published in peer reviewed journals.

Swedish Grace Peter Elmlund,Johan Mårtelius,2015

Organization Theory Kevin A. Carson,2008 This book applies the economic principles of individualist anarchism, as developed in *Studies in Mutualist Political Economy*, to the study of the large organization. It integrates the insights of mainstream organization theory into that framework, along with those of more radical thinkers like Ivan Illich, Paul Goodman, and R.A. Wilson. Part One examines the ways in which state intervention in the market, including subsidies to the inefficiency costs of large size and regulatory protection against the competitive consequences of inefficiency, skews the size of the predominant business artificially upward to an extent that simply could not prevail in a free market. Part Two examines the effects of such large organizational size on the character of the system as a whole. Part Three examines the internal pathologies and contradictions of organizations larger than a free market could support. And Part Four surveys the potential building blocks of an alternative, decentralized and libertarian economic order.

The Great Turning David C. Korten,2009-02-20 Although the issues addressed in *The Great Turning* are global and universal, I have chosen to focus my analysis on the United States. It is the nation among all others that is most challenged by the imperatives of the Great Turning. Few other nations are so accustomed to living beyond their own means, so imbued with a sense of special virtue and entitlement, or so burdened by a political leadership as out of touch with global reality and as incapable of accepting responsibility for the consequences of its actions. Because of its global presence, whether the United States responds to the imperatives with the logic of Empire or the logic of Earth Community is likely to have far-reaching consequences for all nations. Furthermore, the United States is the nation of my birth, the nation I know best and love most, and the nation for whose role in the world I feel most responsible.

The Ecology of Building Materials Bjorn Berge,2009-06-04 *The Ecology of Building Materials* explores key questions surrounding sustainability of building materials. It provides technical data to enable design and building professionals to choose the most appropriate materials for a project: those that are least polluting, most energy efficient, and from sustainable sources. The book also gives information and guidance on a wide range of issues such as recycling, detailing for increased durability and Life Cycle Analysis. Berge's book, translated from the Norwegian by Chris Butters and Filip Henley, offers safe and environmentally friendly material options. It provides an essential and easy-to-use reference guide to this complex subject for the building industry professional. New to this edition: • Thorough exploration of building materials in relation to climate change issues • Extensive updating of basic data, as well as the introduction of a wide range of new materials • Methods for recycling and reuse of materials • More information on the interaction between materials and the indoor environment, ventilation and energy use • Full colour text and user-friendly larger format Bjørn Berge is a practicing architect, researcher and lecturer. Since the 1970s, he has written several books on building ecology for the Scandinavian public. He is one of the founders of Gaia Architects who have developed a wide range of pioneering techniques in sustainable building.

I Will Shout Your Name John Matthew Fox,2017 Debut story collection by John Matthew Fox.

The Production of Houses Christopher Alexander,Howard Davis,1985 As an innovative thinker about building and planning, Christopher Alexander has attracted a devoted following. His seminal books--*The Timeless Way of Building*, *A Pattern Language*, and *The Oregon Experiment*--defined a radical and fundamentally new process of environmental design. Alexander now gives us the latest book in his series--a book that puts his theories to the test and shows what sort of production system can create the kind of environment he has envisioned. *The Production of Houses* centers around a group of buildings which Alexander and his associates built in 1976 in northern Mexico. Each house is different and the book explains how each family helped to lay out and construct its own home according to the family's own needs and in the framework of the pattern language. Numerous diagrams and tables as well as a variety of anecdotes make the day-today process clear. The Mexican project, however, is only the

starting point for a comprehensive theory of housing production. The Production of Houses describes seven principles which apply to any system of production in any part of the world for housing of any cost in any climate or culture or at any density. In the last part of the book, The Shift of Paradigm, Alexander describes, in detail, the devastating nature of the revolution in world view which is contained in his proposal for housing construction, and its overall implications for deep-seated cultural change.

Public Administration Eran Vigoda-Gadot,2002-06-07 Offering strategies for a new generation of administrative systems, this book explores the impact of recent managerial reforms and shifting societal values on the stability, legitimacy, and progress of democratic governments. The chapters highlight innovations in consumer communication management and marketing, evolving methods of policy planning, formation, and implementation, and the role of high-information/high-technology in public agencies. Providing insight into the changing environment present in most governing structures, the book covers ethical dilemmas in public service, the definition of work for public sector employees, and population behavior during mass disasters.

Turbine Repair ,1989

Das Linz Café Christopher Alexander,1981 Many illustrations of the cafe - both during construction and as completed, from different angles, at different times of the day, and in different parts of the building complete this book.

Managing Complexity: Insights, Concepts, Applications Dirk Helbing,2007-10-13 The essays and lectures collected in this book center around knowledge transfer from the complex-system sciences to applications in business, industry and society, as viewed from a broad perspective. The contributions aim to raise awareness across the spectrum to meet the increasing need to integrate lessons from complexity research into everyday planning, decision making, logistics or optimization procedures and forecasting. The writing has been largely kept non-technical.

The Battle for the Life and Beauty of the Earth Christopher Alexander,Hans Joachim Neis,Maggie Moore Alexander,2012-11-29 Christoper Alexander's always controversial work raises issues critical to regenerating the environment and creating a new culture for building--and rebuilding--our cities, neighborhoods, buildings, and gardens. Demonstrates the application of Alexander's theories and methods to a large-scale project and shows how architecture can bring life to a community. The creative processes described in the book are for anyone who designs, builds, shapes, repairs, or otherwise modifies the built environment.

Innovations in Smart Cities Applications Volume 5 Mohamed Ben Ahmed,Anouar Abdelhakim Boudhir,İsmail Rakıp Karaş,Vipul Jain,Sehl Mellouli,2022-03-03 This book sets the innovative research contributions, works, and solutions for almost all the intelligent and smart applications in the smart cities. The smart city concept is a relevant topic for industrials, governments, and citizens. Due to this, the smart city, considered as a multi-domain context, attracts tremendously academics researchers and practitioners who provide efforts in theoretical proofs, approaches, architectures, and in applied researches. The importance of smart cities comes essentially from the significant growth of populations in the near future which conducts to a real need of smart applications that can support this evolution in the future cities. The main scope of this book covers new and original ideas for the next generations of cities using the new technologies. The book involves the application of the data science and AI, IoT technologies and architectures, smart earth and water management, smart education and E-learning systems, smart modeling systems, smart mobility, and renewable energy. It also reports recent research works on big data technologies, image processing and recognition systems, and smart security and privacy.

Emergent Macroeconomics Domenico Gatti,Edoardo Gaffeo,Mauro Gallegati,Gianfranco Giulioni,Antonio Palestrini,2008-12-05 This valuable book contributes substantively to the current state-of-the-art of macroeconomics. It provides a method for building models in which business cycles and economic growth emerge from the interactions of a large number of heterogeneous agents. Drawing from recent advances in agent-based computational modeling, the authors show how insights from dispersed fields can be fruitfully combined to improve our understanding of macroeconomic dynamics.
