Conway MacMillan

Assembling the Tree of Life Joel Cracraft, Michael J. Donoghue, 2004-07-22
This edited volume provides an authoritative synthesis of knowledge about the history of life. All the major groups of organisms are treated, by the leading workers in their fields. With sections on: The Importance of Knowing the Tree of Life; The Origin and Radiation of Life on Earth; The Relationships of Green Plants; The Relationships of Fungi; and The Relationships of Animals. This book should prove indispensable for evolutionary biologists, taxonomists, ecologists interested in biodiversity, and as a baseline sourcebook for organismic biologists, botanists, and microbiologists. An essential reference in this fundamental area.

Demographic Methods Across the Tree of Life Roberto Salguero-Gomez, Marlène Gamelon, 2021 Demography is everywhere in our lives: from birth to death. Indeed, the universal currencies of survival, development, reproduction, and recruitment shape the performance of all species, from microbes to humans. The number of techniques for demographic data acquisition and analyses across the entire tree of life (microbes, fungi, plants, and animals) has drastically increased in recent decades. These developments have been partially facilitated by the advent of technologies such as GIS and drones, as well as analytical methods including Bayesian statistics and high-

throughput molecular analyses. However, despite the universality of demography and the significant research potential that could emerge from unifying: (i) questions across taxa, (ii) data collection protocols, and (iii) analytical tools, demographic methods to date have remained taxonomically siloed and methodologically disintegrated. This is the first book to attempt a truly unified approach to demography and population ecology in order to address a wide range of questions in ecology, evolution, and conservation biology across the entire spectrum of life. This novel book provides the reader with the fundamentals of data collection, model construction, analyses, and interpretation across a wide repertoire of demographic techniques and protocols. It introduces the novice demographer to a broad range of demographic methods, including abundance-based models, life tables, matrix population models, integral projection models, integrated population models, individual based models, and more. Through the careful integration of data collection methods, analytical approaches, and applications, clearly guided throughout with fully reproducible R scripts, the book provides an up-to-date and authoritative overview of the most popular and effective demographic tools. *Demographic Methods across the Tree of Life* is aimed at graduate students and professional researchers in the fields of demography, ecology, animal behaviour, genetics, evolutionary biology, mathematical biology, and wildlife management.

American Spiritualities Catherine L. Albanese, 2001 This reader explores current interest in spirituality in the United States. It traces the concept and presence of spirituality in the nation's past and explains the strong attraction to spiritual themes in the present, with attention to questions of definition, historical usage, and connection to religion. Twenty-seven selections pursue the difference and diversity among Americans in terms of their spiritual styles, here understood as modes of experiential knowledge. Catherine L. Albanese has organized these selections to reflect four approaches to spirituality: knowing through the body, or ritual-based spiritualities; knowing through the heart, or evangelical and emotionally toned spiritualities; knowing through the will, or prophetic and social-action spiritualities; and knowing through the mind, or metaphysically oriented spiritualities. Taken together, these essays make the argument that the spiritual is human-made, essentially religious, and surely not the same at all American times and places. The anthology includes selections by Catherine L. Albanese, Janet and Robert Aldridge, Daniel Berrigan, Joseph Epes Brown, Charles W. Colson, Annie Dillard, Virgilio Elizondo, Tamar Frankiel, Emma Goldman, Charles E. Hambrick-Stowe, B. K. S. Iyengar, Curtis D. Johnson, Martin Luther King, Jr., Chen Kung, Jerena Lee, Shirley MacLaine, Aimee Semple McPherson, Thomas Merton, Carry A. Nation, E. Burke Rochford, Jr., Jerry Rubin, Molly Rush, Starhawk, Henry David Thoreau, Ralph Waldo Trine, Joachim Wach, B. Alan Wallace, Steven Wilhelm, and Dhyani Ywahoo. Catherine L. Albanese is Professor of Religious Studies at the University of California, Santa Barbara. She is the author of the widely used textbook

America: Religions and Religion, now in its third edition, and of numerous other articles and books, including Nature Religion in America: From the Algonkian Indians to the New Age. Albanese is a former president of the American Academy of Religion. 552 pages, 6 1/8 x 9 1/4, bibl., index cloth 0-253-33839-5 \$65.00 L / £50.00 paper 0-253-21432-7 \$27.50 s / £21.00

Coconut Biotechnology: Towards the Sustainability of the 'Tree of Life' Steve Adkins, Mike Foale, Roland Bourdeix, Quang Nguyen, Julianne Biddle, 2020-06-24 Widely known as the 'tree of life', coconut (*Cocos nucifera* L.) provides a bountiful source for making a wide variety of healthy foods and industrial items. Its cultivation, however, has been encountering seriously destructive issues including lethal diseases and natural adversities which are currently distressing livelihoods of millions of small-holder farmers around the world. There is an urgent mandate to resolve these issues by meeting sustainable seedling production, facilitating genetic conservation, as well as developing disease identification and modern breeding. This book introduces improvements in coconut biotechnology by covering the advances in micropropagation, germplasm conservation, and molecular pathogenic diagnosis. This comprehensive volume will be a useful source of information and references to researchers, graduate students,

agricultural developers, and scholars in the plant sciences. In order to benefit general readers, the book also covers fundamental aspects of biology, diversity, and evolution of this marvelous palm species.

Deep Metazoan Phylogeny: The Backbone of the Tree of Life J. Wolfgang Wägele, Thomas Bartolomaeus, 2014-02-27 The growing success of molecular methods has challenged traditional views of animal evolution and a large number of alternative hypotheses are hotly debated today. For the deep metazoan phylogeny project, data sets of hitherto unmatched quality and quantity were compiled and analysed with innovative bioinformatics tools. The book begins at the base of the tree of life to discuss the origin of animals and early branches of the phylogenetic tree. The following section presents special data sets gained from mitochondrial genomes and from morphology, with a focus on nervous systems. The final section is dedicated to theoretical aspects of data analysis and new bioinformatics tools. The book closes with a unique general discussion of all hypotheses contained in previous chapters. This work provides the most comprehensive overview available of the state of the art in this exciting field of evolutionary research.

Studies in the Cult of Yahweh Morton Smith, 2015-08-27 These two volumes collect some of the most influential and important scholarly essays by the late Morton Smith (1915-1991), for many years Professor of Ancient History at Columbia University in New York City. Smith was admired and feared for his extraordinary ability to look at familiar texts in unfamiliar ways, to re-open old questions, to pose new questions, and to demolish received truths. He practiced the hermeneutics of suspicion to devastating effect. His answers are not always convincing but his questions cannot be ignored. The essays of

Volume I center on the Hebrew Bible (Old Testament), Ancient Israel and Ancient Judaism, of Volume II on the Christian Bible (New Testament), Early Christianity and Ancient Magic. Volume II also contains an assessment of Smith's scholarly achievement and a complete list of his publications.

Biology Neil A. Campbell, Jane B. Reece, 2005 Neil Campbell and Jane Reece's BIOLOGY remains unsurpassed as the most successful majors biology textbook in the world. This text has invited more than 4 million students into the study of this dynamic and essential discipline. The authors have restructured each chapter around a conceptual framework of five or six big ideas. An Overview draws students in and sets the stage for the rest of the chapter, each numbered Concept Head announces the beginning of a new concept, and Concept Check questions at the end of each chapter encourage students to assess their mastery of a given concept. & New Inquiry Figures focus students on the experimental process, and new Research Method Figures illustrate important techniques in biology. Each chapter ends with a Scientific Inquiry Question that asks students to apply scientific investigation skills to the content of the chapter.

The Tree of Life and Arboreal Aesthetics in Early Modern Literature Victoria Bladen, 2021-10-27 *The Tree of Life and Arboreal Aesthetics in Early Modern Literature* explores the vital motif of the tree of life and what it meant to early modern writers who drew from its long histories in biblical, classical and folkloric contexts, giving rise to a language of trees, an arboreal aesthetics. An ancient symbol of immortality, the tree of life was appropriated by Christian ideology and iconography to express ideas about Christ; however, the concept also migrated beyond religious doctrine. Ideas

circulating around the tree of life enabled writers to imagine and articulate ideas of death and rebirth, loss and regeneration, the condition of the political state and personal states of the soul through arboreal metaphors and imagery. The motif could be used to sacralise landscapes, such as the garden, orchard or country estate, blurring the lines between contemporary green spaces and the spiritual and poetic imaginary. Located within the field of environmental humanities, and intersecting with ecocriticism and critical plant studies, this volume outlines a comprehensive history of the tree of life and offers interdisciplinary readings of focus texts by Shakespeare, George Herbert, Henry Vaughan, Aemilia Lanyer, Andrew Marvell and Ralph Austen. It includes consideration of related ideas and motifs, such as the tree of Jesse and the Green Man, illuminating the rich histories and meanings that emerge when an understanding of the tree of life and arboreal aesthetics are brought to the analysis of early modern literary texts and their representations of green spaces, both physical and metaphysical.

Principles of Life David M. Hillis, 2012 For sample chapters, a video interview with David Hillis, and more information, visit www.whfreeman.com/hillispreview. Sinauer Associates and W.H. Freeman are proud to introduce Principles of Life. Written in the spirit of the reform movement that is reinvigorating the introductory majors course, Principles of Life cuts through the thicket of excessive detail and factual minutiae to focus on what matters most in the study of biology today. Students explore the most essential biological ideas and information in the context of the field's defining experiments, and are actively engaged in analyzing research data. The result is a textbook that is hundreds of pages shorter (and significantly less expensive) than the current majors introductory books.
