## *The Definitive ANTLR 4 Reference* Terence

Parr, 2013-01-15 Programmers run into parsing problems all the time. Whether it's a data format like JSON, a network protocol like SMTP, a server configuration file for Apache, a PostScript/PDF file, or a simple spreadsheet macro language--ANTLR v4 and this book will demystify the process. ANTLR v4 has been rewritten from scratch to make it easier than ever to build parsers and the language applications built on top. This completely rewritten new edition of the bestselling Definitive ANTLR Reference shows you how to take advantage of these new features. Build your own languages with ANTLR v4, using ANTLR's new advanced parsing technology. In this book, you'll learn how ANTLR automatically builds a data structure representing the input (parse tree) and generates code that can walk the tree (visitor). You can use that combination to implement data readers, language interpreters, and translators. You'll start by learning how to identify grammar patterns in language reference manuals and then slowly start building increasingly complex grammars. Next, you'll build applications based upon those grammars by walking the automatically generated parse trees. Then you'll tackle some nasty language problems by parsing files containing more than one language (such as XML, Java, and Javadoc). You'll also see how to take absolute control over parsing by embedding Java actions into the grammar. You'll learn directly from well-known parsing expert Terence Parr, the ANTLR creator and project lead. You'll master ANTLR grammar construction and learn how to build language tools using the built-in parse tree visitor mechanism. The book teaches using real-world examples and shows you how to use ANTLR to build such things as a data file reader, a JSON to XML translator, an R parser,

and a Java class->interface extractor. This book is your ticket to becoming a parsing guru! What You Need: ANTLR 4.0 and above. Java development tools. Ant build system optional(needed for building ANTLR from source)

### **Undocumented Secrets of MATLAB-Java**

**Programming** Yair M. Altman,2011-12-05 For a variety of reasons, the MATLAB®-Java interface was never fully documented. This is really quite unfortunate: Java is one of the most widely used programming languages, having many times the number of programmers and programming resources as MATLAB. Also unfortunate is the popular claim that while MATLAB is a fine programming platform for prototyping, it is not suitable for real-world, modern-looking applications. Undocumented Secrets of MATLAB®-Java Programming aims to correct this misconception. This book shows how using Java can significantly improve MATLAB program appearance and functionality, and that this can be done easily and even without any prior Java knowledge. Readers are led step-by-step from simple to complex customizations. Code snippets, screenshots, and numerous online references are provided to enable the utilization of this book as both a sequential tutorial and as a random-access reference suited for immediate use. Java-savvy readers will find it easy to tailor code samples for their particular needs; for Java newcomers, an introduction to Java and numerous online references are provided. This book demonstrates how The MATLAB programming environment relies on Java for numerous tasks, including networking, data-processing algorithms and graphical user-interface (GUI) We can use MATLAB for easy access to external Java functionality, either third-party or user-created Using Java, we can extensively customize the

MATLAB environment and application GUI, enabling the creation of visually appealing and usable applications

### **Reliable Software Technologies -- Ada-Europe**

**2003** Jean-Pierre Rosen, International Conference on Reliable Software Technologies, 2003-06-02 The refereed proceedings of the 8th International Conference on Reliable Software Technologies, Ada-Europe 2003, held in Toulouse, France in June 2003. The 29 revised full papers presented together with 3 invited papers were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on Ravenscar, language issues, static analysis, distributed information systems, software metrics, software components, formal specification, real-time kernel, software testing, and real-time systems design.

The Family Tree Guide to DNA Testing and Genetic Genealogy Blaine T. Bettinger, 2019-08-13 Unlock the family secrets in your DNA! Discover the answers to your family history mysteries using the most cutting edge tool available. This plain-English guide (newly updated and expanded to include the latest DNA developments) will teach you what DNA tests are available; the pros and cons of the major testing companies; and how to choose the right test to answer your specific genealogy questions. And once you've taken a DNA test, this guide will help you use your often-overwhelming results, with tips for understanding ethnicity estimates, navigating suggested cousin matches, and using third-party tools like GEDmatch to further analyze your data. The book features: · Colorful diagrams and expert definitions that explain key DNA terms and concepts such as haplogroups and DNA inheritance patterns · Detailed guides to each of the major kinds of DNA tests and tips for selecting the DNA test that can best help you solve your family mysteries, with case

studies showing how each can be useful · Information about third-party tools you can use to more thoroughly analyze your test results once you've received them · Test comparison guides and research forms to help you select the most appropriate DNA test and organize your results · Insights into how adoptees and others who know little about their ancestry can benefit from DNA testing Whether you've just heard of DNA testing or you've tested at all three major companies, this guide will give you the tools you need to unpuzzle your DNA and discover what it can tell you about your family tree.

**Introduction to Java Programming** Y. Daniel Liang, 2011 Introduction to Java Programming, Comprehensive, 8e, features comprehensive coverage ideal for a one-, two-, or three-semester CS1 course sequence. Regardless of major, students will be able to grasp concepts of problem-solving and programming thanks to Liang's fundamentals-first approach, students learn critical problem solving skills and core constructs before object-oriented programming. Liang's approach has been extended to application-rich programming examples, which go beyond the traditional math-based problems found in most texts. Students are introduced to topics like control statements, methods, and arrays before learning to create classes. Later chapters introduce advanced topics including graphical user interface, exception handling, I/O, and data structures. Small, simple examples demonstrate concepts and techniques while longer examples are presented in case studies with overall discussions and thorough line-by-line explanations. Increased data structures chapters make the Eighth Edition ideal for a full course on data structures.

**After Law** Laurent de Sutter, 2021-02-03 Law is the most sacred fetish of our time. From radicals to conservatives, there is no militant, activist or thinker who would consider doing without it. But the history of our fascination with law is long and complex, and reaches deeper into our culture than we might think. In *After Law*, Laurent de Sutter takes us on a journey to uncover the sources of our fascination. He shows that at a certain moment in our history a choice was made to treat law as a decisive feature of civilization, but this choice was neither obvious nor necessary. Other political, social, religious or cultural possibilities could have been chosen instead – from ancient Egypt to Mesopotamia, from medieval Japan to China, from Islam to Judaism, other cultures have devised sophisticated tools to help people live together without having to deal with norms, rules and principles. This is a lesson worth reflecting on, especially at a time when the rule of law and the functioning of justice are increasingly showing their sinister side – and their impotence. Is there life beyond law?

**Runtime Verification** Axel Legay, Saddek Bensalem, 2013-09-19 This book constitutes the refereed proceedings of the 4th International Conference on Runtime Verification, RV 2013, held in Rennes, France, in September 2013. The 24 revised full papers presented together with 3 invited papers, 2 tool papers, and 6 tutorials were carefully reviewed and selected from 58 submissions. The papers address a wide range of specification languages and formalisms for traces; specification mining; program instrumentation; monitor

construction techniques; logging, recording, and replay; fault detection, localization, recovery, and repair; program steering and adaptation; as well as metrics and statistical information gathering; combination of static and dynamic analyses and program execution visualization.

**Digital Humanities and Religions in Asia** L.W.C. van Lit, James Harry Morris, 2023-12-04 In pre-modern religions in the geographical context of Asia we encounter unique scripts, number systems, calendars, and naming conventions. These can make Western-built technologies – even tools specifically developed for digital humanities – an ill fit to our needs. The present volume explores this struggle and the limitations and potential opportunities of applying a digital humanities approach to pre-modern Asian religions. The authors cover Buddhism, Christianity, Daoism, Islam, Jainism, Judaism and Shintoism with chapters categorized according to their focus on: 1) temples, 2) manuscripts, 3) texts, and 4) social media. Thus, the volume guides readers through specific methodologies and practical examples while also providing a critical reflection on the state of the field, pushing the interface between digital humanities and pre-modern Asian religions into new territory.

*Reliable Software Technologies, Ada-Europe ...*, 2003  
Accelerating MATLAB Performance Yair M. Altman, 2014-12-11 The MATLAB® programming environment is often perceived as a platform suitable for prototyping and modeling but not for serious applications. One of the main complaints is that MATLAB is just too slow. Accelerating MATLAB Performance aims to correct this perception by describing multiple ways to greatly improve MATLAB program speed. Packed with thousands of helpful tips, it leaves no stone unturned, discussing every aspect of MATLAB. Ideal for novices and

professionals alike, the book describes MATLAB performance in a scale and depth never before published. It takes a comprehensive approach to MATLAB performance, illustrating numerous ways to attain the desired speedup. The book covers MATLAB, CPU, and memory profiling and discusses various tradeoffs in performance tuning. It describes both the application of standard industry techniques in MATLAB, as well as methods that are specific to MATLAB such as using different data types or built-in functions. The book covers MATLAB vectorization, parallelization (implicit and explicit), optimization, memory management, chunking, and caching. It explains MATLAB's memory model and details how it can be leveraged. It describes the use of GPU, MEX, FPGA, and other forms of compiled code, as well as techniques for speeding up deployed applications. It details specific tips for MATLAB GUI, graphics, and I/O. It also reviews a wide variety of utilities, libraries, and toolboxes that can help to improve performance. Sufficient information is provided to allow readers to immediately apply the suggestions to their own MATLAB programs. Extensive references are also included to allow those who wish to expand the treatment of a particular topic to do so easily. Supported by an active website, and numerous code examples, the book will help readers rapidly attain significant reductions in development costs and program run times.

**How to Program Bongo** Jocelyn Becker, 1997 The intermediate four-color How to Program series complements the Bongo aesthetic perfectly. The modern, hip use of color is ideally suited for Java's object-oriented code, and the visual appeal of the series will help bring programmers to the design process. The CD-ROM contains a trial version of Bongo, example projects, code from the

book, and Java class GUI libraries.

*Fruit of the Lemon* Andrea Levy, 2007-01-23 From Andrea Levy, author of *Small Island* and winner of the Whitbread Book of the Year and the Best of the Best Orange Prize, comes a story of one woman and two islands. Faith Jackson knows little about her parents' lives before they moved to England. Happy to be starting her first job in the costume department at BBC television, and to be sharing a house with friends, Faith is full of hope and expectation. But when her parents announce that they are moving home to Jamaica, Faith's fragile sense of her identity is threatened. Angry and perplexed as to why her parents would move to a country they so rarely mention, Faith becomes increasingly aware of the covert and public racism of her daily life, at home and at work. At her parents' suggestion, in the hope it will help her to understand where she comes from, Faith goes to Jamaica for the first time. There she meets her Aunt Coral, whose storytelling provides Faith with ancestors, whose lives reach from Cuba and Panama to Harlem and Scotland. Branch by branch, story by story, Faith scales the family tree, and discovers her own vibrant heritage, which is far richer and wilder than she could have imagined. *Fruit of the Lemon* spans countries and centuries, exploring questions of race and identity with humor and a freshness, and confirms Andrea Levy as one of our most exciting contemporary novelists.
