Tropical Ecology John C. Kricher, 2011-02-28 A comprehensive introduction to tropical ecology This full-color illustrated textbook offers the first comprehensive introduction to all major aspects of tropical ecology. It explains why the world's tropical rain forests are so universally rich in species, what factors may contribute to high species richness, how nutrient cycles affect rain forest ecology, and how ecologists investigate the complex interrelationships among flora and fauna. It covers tropical montane ecology, riverine ecosystems, savanna, dry forest—and more. Tropical Ecology begins with a historical overview followed by a sweeping discussion of biogeography and evolution, and then introduces students to the unique and complex structure of tropical rain forests. Other topics include the processes that influence everything from species richness to rates of photosynthesis: how global climate change may affect rain forest characteristics and function; how fragmentation of ecosystems affects species richness and ecological processes; human ecology in the tropics; biodiversity; and conservation of tropical ecosystems and species. Drawing on real-world examples taken from actual research, Tropical Ecology is the best textbook on the subject for advanced undergraduates and graduate students. Offers the first comprehensive introduction to tropical ecology Describes all the major kinds of tropical terrestrial ecosystems Explains species diversity, evolutionary processes, and coevolutionary interactions Features numerous color illustrations and examples from actual research Covers global warming, deforestation, reforestation, fragmentation, and conservation The essential textbook for advanced undergraduates and graduate students Suitable for courses with a field component Leading universities that have adopted this book include: Biola University Bucknell University California State University, Fullerton Colorado State University - Fort Collins Francis Marion University Michigan State University Middlebury College Northern Kentucky University Ohio Wesleyan University St. Mary's College of Maryland Syracuse University Tulane University University of California, Santa Cruz University of Central Florida University of Cincinnati University of Florida University of Missouri University of New Mexico University of North Carolina at Chapel Hill University of the West Indies

**Major Flowering Trees of Tropical Gardens** M. S. Swaminathan, S. L.

Kochhar, 2019-05-23 This comprehensive text on flowering trees of tropical gardens discusses some new species of trees, including *Adansonia digitata*, *Monodora myristica*, *Flacourtia montana*, *Balanites aegyptiaca*, *Bursera serrata*, *Commiphora wightii* and *Semecarpus anacardium*. The text covers more than 200 of the most striking and widespread trees alongside closely related genera and species (both native and exotic) commonly encountered in the tropical climate. It includes more than 700 high resolution coloured photographs, depicting different facets including growth habit, morphological details of stem, leaves, flowers and fruits. The different tree species are organized according to Bentham and Hooker's system of classification of seed plants. The book discusses many aspects of trees including common and botanical names together with synonyms, taxonomic families, etymology (how trees have derived their names), phenology, their native place, geographical

distribution, mythological notes, religious significance and economic importance. The text is useful for graduate students and academic researchers in the field of life sciences.

Tropical Geometry and Integrable Systems Chris Athorne, Diane Maclagan, Ian Strachan, 2012 This volume contains the proceedings of the conference on tropical geometry and integrable systems, held July 3-8, 2011, at the University of Glasgow, United Kingdom. One of the aims of this conference was to bring together researchers in the field of tropical geometry and its applications, from apparently disparate ends of the spectrum, to foster a mutual understanding and establish a common language which will encourage further developments of the area. This aim is reflected in these articles, which cover areas from automata, through cluster algebras, to enumerative geometry. In addition, two survey articles are included which introduce ideas from researchers on one end of this spectrum to researchers on the other. This book is intended for graduate students and researchers interested in tropical geometry and integrable systems and the developing links between these two areas.

*Regolith Exploration Geochemistry in Tropical and Subtropical Terrains* C.R.M. Butt, H. Zeegers, 2015-12-04 The use of exploration geochemistry has increased enormously in the last decade. The present volume specifically addresses those geochemical exploration practices appropriate for tropical, sub-tropical and adjacent areas - in environments ranging from rainforest to desert. Practical recommendations are made for the optimization of sampling, and analytical and interpretational procedures for exploration according to the particular nature of tropically weathered terrains. The underlying theme is the recognition that regions between 35°N and 35°S in particular have a common history of deep chemical weathering and lateritization during the late Mesozoic and early Tertiary. This has had a profound and lasting effect, so that the surface geochemical expressions of mineralization throughout these regions have many similar features, with local modification due to more recent weathering under changed climates. The volume discusses the data derived from numerous research and case studies in terms of exploration and dispersion models based on the weathering and geomorphological history. The models permit valid comparisons between equivalent terrains that may be geographically widely separated and situated in quite different climatic environments. The basis of the volume is to view geochemical dispersion within the context of a genetic understanding of the evolution of landforms and the regolith (i.e. landscape geochemistry) and to develop exploration procedures based on this understanding. This book should be of interest to exploration geochemists, economic geologists, soil scientists, geomorphologists and environmental geochemists.

*Tropical Yams and Their Potential* Franklin W. Martin, William C. Fischer, 1976

Biodiversity and Climate Change Adaptation in Tropical Islands Chandrakasan Sivaperuman, A. Velmurugan, Awnindra Kumar Singh, I. Jaisankar, 2018-04-05 Biodiversity and Climate Change Adaptation in Tropical Islands provides comprehensive information on climate change, biodiversity, possible impacts, adaptation measures and policy challenges to help users rehabilitate and preserve the natural resources of tropical islands. While biodiversity and climate change of tropical islands has previously received less attention, it is ironically one of the most vulnerable regions in this regard. The core content of the work derives largely from the ideas and research output from various reputed scientists and experts who have recorded climate change

impacts on aquatic and coastal life in tropical regions. Contributors have direct working experience with the tribes in some of the tropical islands. All of their expertise and information is compiled and presented in the work, including coverage related to climate change. This work highlights the ever-growing need to develop and apply strategies that optimize the use of natural resources, both on land and in water and judicious use of biodiversity. It functions as a critical resource on tropical island biodiversity for researchers, academicians, practitioners and policy makers in a variety of related disciplines. Covers a huge range of biodiversity documentation, conservation measures and strategies that can be applied to various sectors, from forests to agriculture Brings together expertise from researchers in the area who have direct experience in the regions described Contains a wealth of field research related to biodiversity conservation and its applications from a variety of tropical islands

*Tropical Diseases* Sangkot Marzuki, Jan Verhoef, Harm Snippe, 2012-12-06  
*Tropical Diseases: From Molecule to Bedside* covers a wide range of topics that reflect perspectives of northern and southern hemispheres. Fittingly, it defines tropical diseases in a broader-than-usual manner. The book discusses traditional tropical medicine topics of infectious diseases and nutritional deficiencies. These diseases are common in the tropics, although some are associated more with poverty than with tropical living conditions. It also deals with genetic diseases and genomic issues that are truly associated with living in the tropics, e.g. the thalassemias. The book begins with several papers describing the vast human genetic diversity of Southeast Asia and its relationship to several genetic disorders. These papers illustrate the future direction of genomic activities in relation to disease susceptibility and resistance. The next sections deal with malaria and four specific viral and bacterial diseases of the tropics: hepatitis B and C, tuberculosis, and leprosy, followed by a section on general bacterial infection. Two papers on nutrition complete the volume.

*Tropical Roots and Tubers* Harish K. Sharma, Nicolas Y. Njintang, Rekha S. Singhal, Pragati Kaushal, 2016-08-23  
Roots and tubers are considered as the most important food crops after cereals and contribute significantly to sustainable development, income generation and food security especially in the tropical regions. The perishable nature of roots and tubers demands appropriate storage conditions at different stages starting from farmers to its final consumers. Because of their highly perishable nature, search for efficient and better methods of preservation/processing have been continuing alongside the developments in different arena. This book covers the processing and technological aspects of root and tuber foods, detailing the production and processing of roots and tubers such as taro, cassava, sweet potato, yam and elephant foot yam. Featuring chapters on anatomy, taxonomy and physiology, molecular and biochemical characterization, GAP, GMP, HACCP, Storage techniques, as well as the latest technological interventions in Taro, Cassava, Sweet potato, yam and Elephant foot Yam.

**Forecasters' Guide to Tropical Meteorology** Gary D. Atkinson, 1971  
A practical manual for training and reference use of USAF weather forecasters who will work in the tropics, it covers basic facts of climatology, circulation, synoptic models, analysis and forecasting, application throughout the tropics. A broad survey is made of the literature, evaluated in light of the experience of the author. Physical factors controlling tropical circulations are briefly discussed. The data sources for synoptic purposes are reviewed. Climatology of pressure, winds, temperature, humidity, clouds, rainfall and disturbances is presented in a form specially suitable for forecasters. Analysis and for forecasting of disturbances, cyclones, severe weather, terminal weather, etc., are treated at length. Emphasis is placed on uses of climatology and satellite cloud photos. Over 230 figures adapted from the literature or prepared by the author serve to illustrate all the essential facts and principles discussed. A summary of the state of art

and future outlook of tropical meteorology is included.
