Mobile Computing, Applications, and Services Petros Zerfos, Rebecca Montanari, Thomas Phan, 2010-05-11 This proceedings volume includes the full research papers presented at the First International Conference on Mobile Computing, Applications, and Services (MobiCASE) held in San Diego, California, during October 26-29, 2009. It was sponsored by ICST and held in conjunction with the First Workshop on Innovative Mobile User Interactivity (WIMUI). MobiCASE highlights state-of-the-art academic and industry research work in - main topics above the OSI transport layer with an emphasis on complete end-to-end systems and their components. Its vision is largely influenced by what we see in the consumer space today: high-end mobile phones, high-bandwidth wireless networks, novel consumer and enterprise mobile applications, scalable software infrastructures, and of course an increasingly larger user base that is moving towards an almost a- mobile lifestyle. This year's program spanned a wide range of research that explored new features, algorithms, and infrastructure related to mobile platforms. We received submissions from many countries around the world with a high number from Europe and Asia in addition to the many from North America. Each paper received at least three independent reviews from our Technical Program Committee members during the Spring of 2009, with final results coming out in July. As a result of the review process, we selected 15 high-quality papers and complemented them with six invited submissions from leading researchers, reaching the final count of 21 papers in the program.

Real-Time Simulation Technologies: Principles, Methodologies, and Applications Katalin Popovici, Pieter J. Mosterman, 2012-08-17 Real-Time Simulation Technologies: Principles, Methodologies, and Applications is an edited compilation of work that explores fundamental concepts and basic techniques of real-time simulation for complex and diverse systems across a broad spectrum. Useful for both new entrants and experienced experts in the field, this book integrates coverage of detailed theory, acclaimed methodological approaches, entrenched technologies, and high-value applications of real-time simulation—all from the unique perspectives of renowned international contributors. Because it offers an accurate and otherwise unattainable assessment of how a system will behave over a particular time frame, real-time simulation is increasingly critical to the optimization of dynamic processes and adaptive systems in a variety of enterprises. These range in scope from the maintenance of the national power grid, to space exploration, to the development of virtual reality programs and cyber-physical systems. This book outlines how, for these and other undertakings, engineers must assimilate real-time data with computational tools for rapid decision making under uncertainty. Clarifying the central concepts behind real-time simulation tools and techniques, this one-of-a-kind resource: Discusses the state of the art, important challenges, and high-impact developments in simulation technologies Provides a basis for the study of real-time simulation as a fundamental and foundational technology Helps readers develop and refine principles that are applicable across a wide variety of application domains As science moves toward more advanced technologies, unconventional design approaches, and unproven regions of the design space, simulation tools are increasingly critical to successful design and operation of technical systems in a growing number of application domains. This must-have resource presents detailed coverage of real-time simulation for system design, parallel and distributed simulations, industry tools, and a large set of applications.

Proceeding of the International Conference on Computer Networks, Big Data and IoT (ICCBI - 2019) A. Pasumpon Pandian, Ram Palanisamy, Klimis Ntalianis, 2020-03-04 This book presents the proceedings of the International Conference on Computing Networks, Big Data and IoT [ICCBI 2019], held on December 19-20, 2019 at the Vaigai College of Engineering, Madurai, India. Recent years have witnessed the intertwining development of the Internet of Things and big data, which are increasingly deployed in computer network architecture. As society becomes smarter, it is critical to replace the traditional technologies with modern ICT architectures. In this context, the Internet of Things connects smart objects through the Internet and as a result generates big data. This has led to new computing facilities being developed to derive intelligent decisions in the big data environment. The book covers a variety of topics, including information management, mobile computing and applications, emerging IoT applications,

distributed communication networks, cloud computing, and healthcare big data. It also discusses security and privacy issues, network intrusion detection, cryptography, 5G/6G networks, social network analysis, artificial intelligence, human-machine interaction, smart home and smart city applications.

Real-Time Vision for Human-Computer Interaction Branislav Kisacanin, Vladimir Pavlovic, Thomas S. Huang, 2005-12-06 200Ts Vision of Vision One of my formative childhood experiences was in 1968 stepping into the Uptown Theater on Connecticut Avenue in Washington, DC, one of the few movie theaters nationwide that projected in large-screen cinerama. I was there at the urging of a friend, who said I simply must see the remarkable film whose run had started the previous week. You won't understand it, he said, but that doesn't matter. All I knew was that the film was about science fiction and had great special effects. So I sat in the front row of the balcony, munched my popcorn, sat back, and experienced what was widely touted as the ultimate trip: 2001: A Space Odyssey. My friend was right: I didn't understand it. . . but in some senses that didn't matter. (Even today, after seeing the film 40 times, I continue to discover its many subtle secrets.) I just had the sense that I had experienced a creation of the highest aesthetic order: unique, fresh, awe inspiring. Here was a film so distinctive that the first half hour had no words whatsoever; the last half hour had no words either; and nearly all the words in between were banal and irrelevant to the plot - quips about security through Voiceprint identification, how to make a phonecall from a space station, government pension plans, and so on.

True Beer Timothy Sprinkle, 2016-08-02 In the 1970s and '80s, the brewing industry shifted was from large corporate suppliers to smaller, independent "microbrewers," typified by producers such as the Boston Beer Company and Sierra Nevada Brewing Company. Today, the market is going even smaller—with tiny, independent brewers setting up shop in neighborhood brew houses nationwide, focusing on crafting unique, flavorful brews specifically for their extremely local clientele. The reality is that beer is in the midst of a renaissance in this country, driven by a new class of these dedicated craft "nanobrewers" and growing communities of drinkers looking for something more from their daily brew—something higher-quality, more unique, more local. These microbrewers rent out small spaces or buy industrial equipment to install in their garages. They're accountants, middle-school teachers, and plumbers who are passionate about beer and who dedicate their free time to producing three or so barrels of their own brew at a time. They sell their bottles to close friends and gift it to family members for birthdays and holidays. They enjoy what they do and they're proud of their product. What's it like inside these small-time brewing operations? What happens behind the scenes? What goes into making high-end craft beer on a small scale? True Beer takes an on-the-ground look at the ultra-small side of the craft brewing movement from the inside out by profiling a number of independent American breweries in detail and using that as a jumping-off point to examine the art and science of brewing, the local farmers and providers behind the scenes, the market itself as well as national trends in nanobrewing, and modern craft beer production. Medical Imaging and Augmented Reality Hongen Liao, P.J. Eddie Edwards, Xiaochuan Pan, Yong Fan, Guang-Zhong Yang, 2010-09-17 The 5th International Workshop on Medical Imaging and Augmented Reality, MIAR 2010, was held at the China National Convention Center (CNCC), Beijing, China on September 19–20, 2010. MIAR has remained a truly international meeting, bringing together researchers from all fields related to medical image analysis, visualization and targeted intervention. In recent years, technical advances in therapeutic delivery and growing demand for patient-specific treatment have accelerated the clinical applications of MIAR-related techniques. Imaging plays an increasingly important role in targeted therapy, with interventions such as drug or gene therapy relying on more accurate delivery tailored to individual patients. Rapid progress in surgical methodologies, such as those with robot assistance, demands precise guidance from both preoperative and intraoperative imaging. The volume of data

available from existing and emerging imaging modalities leads to a - sire for more automated analysis for diagnosis, segmentation and registration. Research in this rapidly developing area is highly multi-disciplinary, integrating research in life sciences, physical sciences, engineering, and medicine.

Practical Palm Pre webOS Projects Frank Zammetti, 2010-05-27 The Palm Pre is the hottest new device on the block. It's the cell phone—nay, personal digital everything—that all the cool kids want to get their hands on...but no one wants to use it more than developers! The Palm Pre is more than just a way-cool device, though: it is built on Palm's webOS, an operating system that changes the game for developers. Building on standards-based web technologies, webOS allows us to create applications more quickly and easily than any other platform out there using the same technologies we know and love already. It turns out to be quite fun, too! In this book, you'll learn all about the Palm Pre and webOS, their capabilities, and how to develop for them. You'll learn to write applications that function entirely on the Pre itself, and you'll also learn to write applications that “live in the cloud” (i.e., keep you connected to the digital world around you). You'll spend most of your time looking at Mojo, the framework API through which your code interfaces with the operating system. All of this will be presented within the context of six fully functional real-world applications that you can use on your own Pre! Once you're done, you'll be ready to write your own webOS applications for the Pre, get them into the app catalog (the online store where Pre applications are made available to Pre owners), and make tons of cash. Learn to program the Palm Pre by sticking to JavaScript.

Write useful apps as well as games. Become productive using Mojo and upload new applications within a day.
