An Investigation of the Backflow Phenomenon in Centrifugal Superchargers William A. Benser,Jason J. Moses,1945 An investigation has been conducted to determine the nature and the extent of the reversal of flow, which occurs at the inlet of centrifugal superchargers over a considerable portion of the operating range. Qualitative studies of this flow reversal were made by lampblack patterns taken on a mixed-flow type impeller, and by tuft studies made on a conventional centrifugal supercharger. Quantitative studies were made on a supercharger specially designed to enable surveys of angularity of flow, static and total pressures, and temperatures to be taken very close to the impeller front face.
