Essential Readings in Evolutionary Biology Francisco J. Ayala,John C. Avise,2014-03-15 Traces scholarly thought from the nineteenth-century birth of evolutionary biology to the mapping of the human genome through forty-eight essays, arranged in chronological order, each preceded by a one-page essay that explains the significance of the chosen work.

Systematic Atheology John R. Shook,2017-12-01 Atheology is the intellectual effort to understand atheism, defend the reasonableness of unbelief, and support nonbelievers in their encounters with religion. This book presents a historical overview of the development of atheology from ancient thought to the present day. It offers in-depth examinations of four distinctive schools of atheological thought: rationalist atheology, scientific atheology, moral atheology, and civic atheology. John R. Shook shows how a familiarity with atheology's complex histories, forms, and strategies illuminates the contentious features of today's atheist and secularist movements, which are just as capable of contesting each other as opposing religion. The result is a book that provides a disciplined and philosophically rigorous examination of atheism's intellectual strategies for reasoning with theology. Systematic Atheology is an important contribution to the philosophy of religion, religious studies, secular studies, and the sociology and psychology of nonreligion.

The Gaia Hypothesis Michael Ruse,2013-09-25 "The book is full of empathetic, insightful, and often very funny portraits of Margulis, Lovelock, and a community of other figures associated with Gaia." —Carla Nappi, New Books in Science, Technology, and Society In 1965 English scientist James Lovelock had a flash of insight: the Earth is not just teeming with life; the Earth, in some sense, is life. He mulled this revolutionary idea over for several years, first with his close friend the novelist William Golding, and then in an extensive collaboration with the American scientist Lynn Margulis. In the early 1970s, he finally went public with the Gaia hypothesis, the idea that everything happens for an end: the good of planet Earth. Lovelock and Margulis were scorned by professional scientists, but the general public enthusiastically embraced Lovelock and his hypothesis. In *The Gaia Hypothesis*, philosopher Michael Ruse, with his characteristic clarity and wit, uses Gaia and its history, its supporters and detractors, to illuminate the nature of science itself. Gaia emerged in the 1960s, a decade when authority was questioned and status and dignity stood for nothing, but its story is much older. Ruse traces Gaia's connection to Plato and a long history of goal-directed and holistic—or organicist—thinking and explains why Lovelock and Margulis's peers rejected it as pseudoscience. But Ruse also shows why the project was a success. He argues that Lovelock and Margulis should be commended for giving philosophy firm scientific basis and for provoking important scientific discussion about the world as a whole, its homeostasis or—in this age of global environmental uncertainty—its lack thereof. "[Ruse's] treatment is thought-provoking and original, as you would expect from this perceptive, irrepressible philosopher of biology." —New Scientist

The Star of Bethlehem Aaron Adair,Bob Berman,2013-09-09 *The Star of Bethlehem: A Skeptical View* is an analysis of the astronomical portent found in the Gospel of Matthew which supposedly led the Magi from the East to the birthplace of Jesus. Throughout history, people have tried to connect the Star to real, naturalistic phenomena, as well as to explain it in other ways. Adair takes a thorough look at all of these explanatory attempts, using the tools of science and astronomy, and finds them fundamentally wanting. Take a trip through the heavens above with Adair as he critically explores many centuries of flawed hypotheses, looking to answer the question Did the Star of Bethlehem really exist? This book is at the conjunction of science and religion. Well researched, scientifically reasoned, elegantly concise, this book will long be required reading on the 'Star of Bethlehem'. Full of fascinating historical facts, and better informed and more careful than any other book on the subject, this should be on the shelf of everyone interested in that legendary celestial event. Richard Carrier, Ph.D., author of *Proving History: Bayes's Theorem and the Quest for the Historical Jesus*. A fascinating and readable feat of hardcore historical legwork and keen scientific analysis. David Fitzgerald, author of *The Complete Heretic's Guide to Western Religion: The Mormons*. ...tightly-argued, well-reasoned.... Adair masterfully demonstrates why every effort to rationalize the Star thus far has failed.... A concise and rigorous must-read for anyone interested in religion, history, and modern efforts to understand the past. Jason Colavito, author of *The Cult of Alien Gods*.

Living the Secular Life Phil Zuckerman,2015-10-27 A sociology professor examines the demographic shift that has led more Americans than ever before to embrace a nonreligious life and highlights the inspirational stories and beliefs that empower modern-day secular culture.

Science and Religion Gregg D. Caruso,2014-04 Are science and religion compatible when it comes to understanding cosmology (the origin of the universe), biology (the origin of life and of the human species), ethics, and the human mind (minds, brains, souls, and free will)? Do science and religion occupy non-overlapping magisteria? Is Intelligent Design a scientific theory? How do the various faith traditions view the relationship between science and religion? What, if any, are the limits of scientific explanation? What are the most important open questions, problems, or challenges confronting the relationship between science and religion, and what are the prospects for progress? These and other questions are explored in *Science and Religion: 5 Questions*—a collection of thirty-three interviews based on 5 questions presented to some of the world's most influential and prominent philosophers, scientists, theologians, apologists, and atheists. Contributions by Simon Blackburn, Susan Blackmore, Sean Carroll, William Lane Craig, William Dembski, Daniel C. Dennett, George F.R. Ellis, Owen Flanagan, Owen Gingerich, Rebecca Newberger Goldstein, John F. Haught, Muzaffar Iqbal, Lawrence Krauss, Colin McGinn, Alister McGrath, Mary Midgley, Seyyed Hossein Nasr, Timothy O'Connor, Massimo Pigliucci, John Polkinghorne, James Randi, Alex Rosenberg, Michael Ruse, Robert John Russell 25. Atheism and Secularity Phil Zuckerman,2009-12-21 This important two-volume contribution to the field of secular studies offers the first comprehensive examination of atheists and non-religious people around the world. Who are atheists? How does atheism relate to various aspects of our social world, such as politics, feminism, globalization, and the family? And what is the current state of atheism internationally? *Atheism and Secularity* addresses the growing interest in the non-religious world by exploring these and related questions. It is a comprehensive and compelling look at atheists and atheism both nationally and internationally, covering a range of topics often overlooked in other books on the subject. *Atheism and Secularity* is not a philosophical, polemic work, but rather an exploration of who atheists are, what they believe, how they relate to the world, and how the world relates to them. The first volume focuses on topics such as family life, gender, sexuality, politics, and social movements. The second volume looks at atheism and secularity around the world, exploring the lives of non-religious people in North America, Japan,

China, India, Europe, the Arab World, and other locations.
