Numerical Investigation of Aerodynamics of Canard-Controlled Missile Using Planar and Grid Tail Fins. Part 1. Supersonic Flow James DeSpirito, Milton E. Vaughn, Jr., W. D. Washington, 2002-09 Viscous computational fluid dynamic simulations were used to predict the aerodynamic coefficients and flowfield around a generic canard-controlled missile configuration in supersonic flow. Computations were performed for Mach 1.5 and 3.0, at six angles of attack between 0 and 10, with 0 and 10 canard deflection, and with planar and grid tail fins, for a total of 48 cases. Validation of the computed results was demonstrated by the very good agreement between the computed aerodynamic coefficients and those obtained from wind tunnel measurements. Visualizations of the flowfield showed that the canard trailing vortices and downwash produced a low-pressure region on the starboard side of the missile that in turn produced an adverse side force. The pressure differential on the leeward fin produced by the interaction with the canard trailing vortices is primarily responsible for the adverse roll effect observed when planar fins are used. Grid tail fins improved the roll effectiveness of the canards at low supersonic speed. No adverse rolling moment was observed with no canard deflection, or at the higher supersonic speed for either tail fin type due to the lower intensity of the canard trailing vortices in these cases. Flow visualizations from the simulations performed in this study help in the understanding of the flow physics and can lead to improved canard and tail fin designs for missiles and rockets.

**Advanced Lithography** Burton Kohler, 2015-02-09 This book presents state-of-the-art information regarding the extensive field of advanced lithography. Advanced lithography expands into numerous sub-fields like micro electro-mechanical system (MEMS), nano-lithography, nano-physics, etc. In optimized electron device, nano-lithography reaches up to 20 nm in size. Subsequently, we

have to analyze and develop true single nanometer size lithography. One of the solutions is to analyze a fusion of bottom up and top down technologies like EB drawing and self-assembly with block copolymer. In nano-photonics and MEMS, 3D structures are required for carrying out specific functions in the devices for applications. They are formed as a result of execution of numerous techniques like stereo-lithography, sputtering, colloid lithography, deposition, dry etching, etc. This book provides the readers with valuable information about nano structure, 3D structure, nano-lithography, and elucidates the methodology, techniques and applications of nano-lithography.

Thunder and Herds Lawrence L Loendorf, 2016-07-22 This volume is the first summary and synthesis of the rock art of the American High Plains, from Archaic times to the historic period. Even more, it presents an engaging combination of Plains archaeology, rock art sites, and holistic archaeological research. This refreshing approach to rock art studies reminds us that archaeologists glean information from the whole site and everything that may have occurred there, rather than simply focusing on the images on stone. Clues to understanding rock art can be found in other images, in associated artifacts, and in ethnographic analogy. Archaeologists are shown how rock art integrates with other materials available for study. With each page, the reader will be engaged in a compelling, and comprehensive story that focuses equally on the art and the archaeology of the prehistoric plains.

**Full Circle** Vladimir Talmy, 2021-04-14 Vladimir Talmy's memoir is a precious document reflecting the dramas of the 20th century. The lives of the author and his family are intertwined with the historical epoch in which they lived. Vladimir Talmy lived a long (1924-2012) and complicated life. He was born and died in the USA, yet the greater part of his life was spent in the USSR where he observed the worst events of Stalin's reign. His parents, American Communists, went to Soviet Russia in 1931 to create a new life. They believed they were choosing the best possible destiny for their son. Vladimir's life in the USSR embraced school and college, service on the front lines of the Second World War, a wound, hospital, then work as an interpreter in the office of the Economic Directorate of the Soviet Military Administration in occupied Germany, and his eventual eight-year imprisonment, from 1947 to 1955, in Stalinist labor camps. Vladimir's father, Leon, was arrested for his work with the Jewish Anti-Fascist Committee and executed in 1952. His mother, Sofia, was exiled to Siberia. Vladimir describes those events in great details and what strikes the reader is his total lack of bitterness. This memoir pays homage to the courage, strong will and kindness of this enlightened man. Vladimir

would come back to America in 1980 - half a century after he had left it. The last 32 years of his life were happy, rich with the work he loved, enjoying the company of his grandchildren and his extended family. Vladimir's story is not just a confession of a witness to, and a participant in, historic events, it is a warning for generations to come.
