Joshua Allensworth Leslie, Thierry P. Robart

Introduction to the \mathcal{H} -Principle Y.

Eliashberg, Nikolai M. Mishachev, 2002 The latest volume in the AMS's high-profile GSM series. The book presents a very accessible exposition of a powerful, but difficult to explain method of solving Partial Differential Equations. Would make an excellent text for courses on modern methods for solving Partial Differential Equations. Very readable treatise of an important and remarkable technique. Strong bookstore candidate.

Geometry of PDEs and Mechanics Agostino

Prástaro, 1996-06-20 This volume presents the theory of partial differential equations (PDEs) from a modern geometric point of view so that PDEs can be characterized by using either technique of differential geometry or algebraic geometry. This allows us to recognize the richness of the structure of PDEs. It presents, for the first time, a geometric theory of non-commutative (quantum) PDEs and gives a general application of this theory to quantum field theory and quantum supergravity. The papers in this volume reflect the richness and diversity of the subject of dynamics. Some are lectures given at the three conferences (Ergodic Theory and Topological Dynamics, Symbolic Dynamics and Coding Theory and Smooth Dynamics, Dynamics and Applied Dynamics) held in Maryland between October 1986 and March 1987; some are work which was in progress during the Special Year, and some

are work which was done because of questions and problems raised at the conferences. In addition, a paper of John Milnor and William Thurston, versions of which had been available as notes but not yet published, is included.

Covering training and working in theatre, film, radio, TV and comedy, it contains invaluable resources such as a casting calendar and articles on a range of topics from your social media profile to what drama schools are looking for to financial and tax issues. An invaluable professional tool that anyone working in the industry will benefit from.

Contact and Symplectic Topology Frédéric Bourgeois,Vincent Colin,András Stipsicz,2014-03-10 Symplectic and contact geometry naturally emerged from the mathematical description of classical

physics. The discovery of new rigidity phenomena and properties satisfied by these geometric structures launched a new research field worldwide. The intense activity of many European research groups in this field is reflected by the ESF Research Networking Programme Contact And Symplectic Topology (CAST). The lectures of the Summer School in Nantes (June 2011) and of the CAST Summer School in Budapest (July 2012) provide a nice panorama of many aspects of the present status of contact and symplectic topology. The notes of the minicourses offer a gentle introduction to topics which have developed in an amazing speed in the recent past. These topics include 3-dimensional and higher dimensional contact topology, Fukaya categories, asymptotically holomorphic methods in contact topology, bordered Floer homology, embedded contact homology, and flexibility results for Stein manifolds.

Perspectives in Nonlinear Partial Differential Equations Henri Berestycki, 2007 In celebration of Haim Brezis's 60th birthday, a conference was held at the Ecole Polytechnique in Paris, with a program testifying to Brezis's wide-ranging influence on nonlinear analysis and partial differential equations. The articles in this volume are primarily from that conference. They present a rare view of the state of the art of many aspects of nonlinear PDEs, as well as describe new directions that are being opened up in this field. The articles, written by mathematicians at the center of current developments, provide somewhat more personal views of the important developments and challenges.

The Geometrical Study of Differential Equations Joshua Allensworth Leslie, Thierry P. Robart, 2001 This volume contains papers based on some of the talks given at the NSF-CBMS conference on ``The Geometrical Study of Differential Equations'' held

at Howard University (Washington, DC). The collected papers present important recent developments in this area, including the treatment of nontransversal group actions in the theory of group invariant solutions of PDEs, a method for obtaining discrete symmetries of differential equations, the establishment of a group-invariant version of the variational complex based on a general moving frame construction, the introduction of a new variational complex for the calculus of difference equations and an original structural investigation of Lie-Backlund transformations. The book opens with a modern and illuminating overview of Lie's line-sphere correspondence and concludes with several interesting open problems arising from symmetry analysis of PDEs. It offers a rich source of inspiration for new or established researchers in the field. This book can serve nicely as a companion volume to a forthcoming book written by the principle speaker at the conference, Professor Niky Kamran, to be published in the AMS series, CBMS Regional Conference Series in Mathematics.

Systems of Transversal Sections Near Critical Energy Levels of Hamiltonian Systems in \mathbb{R}^n Naiara V. de Paulo, Pedro A. S. Salomão, 2018-03-19 In this article the authors study Hamiltonian flows associated to smooth functions H restricted to energy levels close to critical levels. They assume the existence of a saddle-center equilibrium point in the zero energy level. The Hamiltonian function near is assumed to satisfy Moser's normal form and is assumed to lie in a strictly convex singular subset of \mathbb{R}^n . Then for all $\epsilon > 0$ small, the energy level contains a subset near Σ , diffeomorphic to the closed ϵ -ball, which admits a system of transversal sections \mathcal{F} , called a foliation. \mathcal{F} is a singular foliation of Σ and contains two periodic orbits and as binding orbits. \mathcal{F} is the Lyapunoff orbit lying in the center manifold of Σ , has Conley-Zehnder index and spans two rigid planes in \mathbb{R}^n . \mathcal{F} has Conley-Zehnder index and spans a one parameter family of planes in \mathbb{R}^n . A rigid cylinder connecting to Σ completes \mathcal{F} . All regular leaves are transverse to the Hamiltonian vector field. The existence of a homoclinic orbit to Σ in \mathcal{F} follows from this foliation.

Equivalence, Invariants and Symmetry Peter J. Olver, 1995-06-30 Drawing on a wide range of mathematical disciplines, including geometry, analysis, applied mathematics and algebra, this book presents an innovative synthesis of methods used to study problems of equivalence and symmetry which arise in a variety of mathematical fields and physical applications. Systematic and constructive methods for solving equivalence problems and calculating symmetries are developed and applied to a wide variety of mathematical systems, including differential equations, variational problems, manifolds, Riemannian metrics, polynomials and differential operators. Particular emphasis is given to the construction and classification of invariants, and to the reductions of complicated objects to simple canonical forms. This book will be a valuable resource for students and researchers in geometry, analysis, algebra, mathematical physics and other related fields.

Geometry of Cauchy-Riemann Submanifolds Sorin Dragomir, Mohammad Hasan Shahid, Falleh R. Al-Solamy, 2016-05-31 This book gathers contributions by respected experts on the theory of isometric immersions between Riemannian manifolds, and focuses on the geometry of CR structures on submanifolds in Hermitian manifolds. CR structures are a bundle theoretic recast of the tangential Cauchy-Riemann equations in complex analysis involving several complex variables. The book covers a wide range of topics such as Sasakian geometry, Kaehler and locally conformal Kaehler geometry, the tangential CR equations, Lorentzian geometry, holomorphic statistical manifolds, and paraquaternionic CR submanifolds. Intended as a tribute to Professor Aurel Bejancu, who discovered the notion of a CR submanifold of a Hermitian manifold in 1978, the book provides an up-to-date overview of several topics in the geometry of CR

submanifolds. Presenting detailed information on the most recent advances in the area, it represents a useful resource for mathematicians and physicists alike.

Harmonic Vector Fields Sorin Dragomir,Domenico Perrone,2011-10-04 An excellent reference for anyone needing to examine properties of harmonic vector fields to help them solve research problems. The book provides the main results of harmonic vector fields with an emphasis on Riemannian manifolds using past and existing problems to assist you in analyzing and furnishing your own conclusion for further research. It emphasizes a combination of theoretical development with practical applications for a solid treatment of the subject useful to those new to research using differential geometric methods in extensive detail. A useful tool for any scientist conducting research in the field of harmonic analysis Provides applications and modern techniques to problem solving A clear and concise exposition of differential geometry of harmonic vector fields on Riemannian manifolds Physical Applications of Geometric Methods

\$h\$-Principles and Flexibility in Geometry

Hansjörg Geiges,2003 The notion of homotopy principle or \$h\$-principle is one of the key concepts in an elegant language developed by Gromov to deal with a host of questions in geometry and topology. Roughly speaking, for a certain differential geometric problem to satisfy the \$h\$-principle is equivalent to saying that a

solution to the problem exists whenever certain obvious topological obstructions vanish. The foundational examples for applications of Gromov's ideas include (i) Hirsch-Smale immersion theory, (ii) Nash-Kuiper C^1 -isometric immersion theory, (iii) existence of symplectic and contact structures on open manifolds. Gromov has developed several powerful methods that allow one to prove h -principles. These notes, based on lectures given in the Graduiertenkolleg of Leipzig University, present two such methods which are strong enough to deal with applications (i) and (iii).
