Applied Corporate Finance Aswath Damodaran,2014-10-27 Aswath Damodaran, distinguished author, Professor of Finance, and David Margolis, Teaching Fellow at the NYU Stern School of Business, have delivered the newest edition of Applied Corporate Finance. This readable text provides the practical advice students and practitioners need rather than a sole concentration on debate theory, assumptions, or models. Like no other text of its kind, Applied Corporate Finance, 4th Edition applies corporate finance to real companies. It now contains six real-world core companies to study and follow. Business decisions are classified for students into three groups: investment, financing, and dividend decisions.

Religious Giving David H. Smith,2010-04-06 Religious Giving considers the connection between religion and giving within the Abrahamic traditions. Each contributor begins with the assumption that there is something inherently right or natural about the connection. But what exactly is it? To whom should we give, how much should we give, what is the relationship between our giving and our relationship to God? Writing for the introspective donor, congregational leader, or student interested in ways of meeting human needs, the authors focus on the philosophical or theological dimensions of giving. The contributors' goal is not to report on institutional practices, but to provide thoughtful, constructive guidance to the reader -- informed by a critical understanding of the religious traditions under review.

Applied Multivariate Statistics with R Daniel Zelterman,2023-01-20 Now in its second edition, this book brings multivariate statistics to graduate-level practitioners, making these analytical methods accessible without lengthy mathematical derivations. Using the open source shareware program R, Dr. Zelterman demonstrates the process and outcomes for a wide array of multivariate statistical applications. Chapters cover graphical displays; linear algebra; univariate, bivariate and multivariate normal distributions; factor methods; linear regression; discrimination and classification; clustering; time series models; and additional methods. He uses practical examples from diverse disciplines, to welcome readers from a variety of academic specialties. Each chapter includes exercises, real data sets, and R implementations. The book avoids theoretical derivations beyond those needed to fully appreciate the methods. Prior experience with R is not necessary. New to this edition are chapters devoted to longitudinal studies and the clustering of large data. It is an excellent resource for students of multivariate statistics, as well as practitioners in the health and life sciences who are looking to integrate statistics into their work.
