Introduction to Information Retrieval Christopher D. Manning,Prabhakar Raghavan,Hinrich

Schütze,2008-07-07 Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

The Linux Command Line, 2nd Edition William Shotts,2019-03-05 You've experienced the shiny,

point-and-click surface of your Linux computer--now dive below and explore its depths with the power of the command line. The Linux Command Line takes you from your very first terminal keystrokes to writing full programs in Bash, the most popular Linux shell (or command line). Along the way you'll learn the timeless skills handed down by generations of experienced, mouse-shunning gurus: file navigation, environment configuration, command chaining, pattern matching with regular expressions, and more. In addition to that practical knowledge, author William Shotts reveals the philosophy behind these tools and the rich heritage that your desktop Linux machine has inherited from Unix supercomputers of yore. As you make your way through the book's short, easily-digestible chapters, you'll learn how to:

- Create and delete files, directories, and symlinks
- Administer your system, including networking, package installation, and process management
- Use standard input and output, redirection, and pipelines
- Edit files with Vi, the world's most popular text editor
- Write shell scripts to automate common or boring tasks
- Slice and dice text files with cut, paste, grep, patch, and sed

Once you overcome your initial shell shock, you'll find that the command line is a natural and

expressive way to communicate with your computer. Just don't be surprised if your mouse starts to gather dust.

The Fingerprint U. S. Department Justice,2014-08-02 The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

Using Solaris 9 Radhika Girisan,Tanuj Jain,2002 Annotation Provides administrators with in depth coverage of the #1 UNIX operating system, including features new to the popular version 9. Provides

real-life exposure to the reader for the most popular UNIX operating system. Covers new features of Solaris such as NIS/NIS+ (Network Information Service) and support for IPv6. Information is presented in a concise language and provides graphical cues for clear understanding of the features covered. Solaris 9 is a soon-to-be-released UNIX operating system by Sun Microsystems that enables organizations to improve services, reduce risks, and decrease costs through the promise of scalability, continuous real-time computing, and enhanced security. With the release of Solaris 9, Sun Microsystems has defined what a dot-com grade platform must be. It has been tested in the worlds largest data centers. Special Edition Using Solaris 9 is intended to be a one-stop, in-depth reference guide to Solaris 9. It focuses on the reader gaining real-life exposure to the functions of the operating system. This book avoids jargon, and emphasizes brevity and clarity. It also covers key features of Solaris 9 such as NIS/NIS+, Solstice DiskSuite, Solstice AdminSuite, WebFS, JumpStart, and WebStart. Ganesh Govindaswamy is a Sun Certified Solaris System Administrator and is currently a Solaris System Administrator at InfoBase Technologies Ltd., where he administers user accounts, file

systems, and network services. He is also certified in C and C++. NIIT is a global training and software organization offering customized and packaged multimedia educational software products and training. NIIT and Sun Microsystems have a Master Services Agreement. NIIT handles the entire enterprise-wide support functions for Sun, including Sun Technical support, Sun consulting services, training and certification. Feedback Systems Karl Johan Åström, Richard M. Murray, 2021-02-02 The essential introduction to the principles and applications of feedback systems—now fully revised and expanded This textbook covers the mathematics needed to model, analyze, and design feedback systems. Now more user-friendly than ever, this revised and expanded edition of Feedback Systems is a one-volume resource

for students and researchers in mathematics and engineering. It has applications across a range of disciplines that utilize feedback in physical, biological, information, and economic systems. Karl Åström and Richard Murray use techniques from physics, computer science, and operations research to introduce control-oriented modeling. They begin with state space tools for analysis and design, including stability of solutions, Lyapunov functions, reachability, state feedback observability, and estimators. The matrix exponential plays a central role in the analysis of linear control systems, allowing a concise development of many of the key concepts for this class of models. Åström and Murray then develop and explain tools in the frequency domain, including transfer functions, Nyquist analysis, PID control, frequency domain design, and robustness. Features a new chapter on design principles and tools, illustrating the types of problems that can be solved using feedback Includes a new chapter on fundamental limits and new material on the Routh-Hurwitz criterion and root locus plots Provides exercises at the end of every chapter Comes with an electronic solutions manual An ideal textbook for undergraduate and graduate students Indispensable for researchers seeking a self-

contained resource on control theory

The Necromancer's House Christopher Buehlman, 2013-10-01 “You think you got away with something, don’t you? But your time has run out. We know where you are. And we are coming.” Andrew Ranulf Blankenship is a stylish nonconformist with wry wit, a classic Mustang, and a massive library. He’s also a recovering alcoholic and a practicing warlock. His house is a maze of sorcerous booby traps and escape tunnels, as yours might be if you were sitting on a treasury of Russian magic stolen from the Soviet Union thirty years ago. Andrew has long known that magic is a brutal game requiring blood sacrifice and a willingness to confront death, but years of peace and comfort have left him more concerned with maintaining false youth than with seeing to his own defense. Now a monster straight from the pages of Russian folklore is coming for him, and frost and death are coming with her.

Regions and Powers Barry Buzan,Ole Wæver,2003-12-04 This book develops the idea that since decolonisation, regional patterns of security have become more prominent in international politics. The authors combine an operational theory of regional security with an empirical application across the whole of the international system. Individual chapters cover Africa, the Balkans, CIS Europe, East Asia, EU Europe, the Middle East, North America, South America, and South Asia. The main focus is

on the post-Cold War period, but the history of each regional security complex is traced back to its beginnings. By relating the regional dynamics of security to current debates about the global power structure, the authors unfold a distinctive interpretation of post-Cold War international security, avoiding both the extreme oversimplifications of the unipolar view, and the extreme deterritorialisations of many globalist visions of a new world disorder. Their framework brings out the radical diversity of security dynamics in different parts of the world.

The 57 Bus Dashka Slater, 2017-10-17 The riveting New York Times bestseller and Stonewall Book Award winner that will make you rethink all you know about race, class, gender, crime, and punishment. Artfully, compassionately, and expertly told, Dashka Slater's *The 57 Bus* is a must-read nonfiction book for teens that chronicles the true story of an agender teen who was set on fire by another teen while riding a bus in Oakland, California. Two ends of the same line. Two sides of the same crime. If it weren't for the 57 bus, Sasha and Richard never would have met. Both were high school students from Oakland, California, one of the most diverse cities in the country, but they

inhabited different worlds. Sasha, a white teen, lived in the middle-class foothills and attended a small private school. Richard, a Black teen, lived in the economically challenged flatlands and attended a large public one. Each day, their paths overlapped for a mere eight minutes. But one afternoon on the bus ride home from school, a single reckless act left Sasha severely burned, and Richard charged with two hate crimes and facing life imprisonment. The case garnered international attention, thrusting both teenagers into the spotlight. But in *The 57 Bus*, award-winning journalist Dashka Slater shows that what might at first seem like a simple matter of right and wrong, justice and injustice, victim and criminal, is something more complicated—and far more heartbreaking. Awards and Accolades for *The 57 Bus*: A New York Times Bestseller Stonewall Book Award Winner YALSA Award for Excellence in Nonfiction for Young Adults Finalist A Boston Globe-Horn Book Nonfiction Honor Book Winner A TIME Magazine Best YA Book of All Time A Los Angeles Times Book Prize Finalist Don't miss Dashka Slater's newest propulsive and thought-provoking nonfiction book, *Accountable: The True Story of a Racist Social Media Account and the Teenagers Whose Lives It Changed*, which National Book Award

winner Ibram X. Kendi hails as “powerful, timely, and delicately written.”
