Ultra-Large Aircraft, 1940-1970 William Patrick Dean,2018-04-10 In 1962, a unique transport aircraft was built from the parts of 27 Boeing B-377 airliners to provide NASA a means of transporting rocket boosters. With an interior the size of a gymnasium, The Pregnant Guppy was the first of six enormous cargo planes built by Aero Spacelines and two built by Union de Transport Aeriens. More than half a century later, the last Super Guppy is still in active service with NASA and the design concept has been applied to next-generation transports. This comprehensive history of expanded fuselage aircraft begins in the 1940s with the military's need for a long-range transport. The author examines the development of competing designs by Boeing, Convair and Douglas, and the many challenges and catastrophic failures. Behind-the-scenes maneuvers of financiers, corporate raiders, mobsters and other nefarious characters provide an inside look at aviation development from the drawing board to the scrap yard.

Closing the Care Gap with Wearable Devices Michael W. Davis,Michael J. Kirwan,Walter N. Maclay,Harry P. Pappas,2022-12-07 Patient-focused healthcare, driven by COVID-19 experiences, has become a hallmark for providing healthcare services to patients across all modalities of care and in the home. The ability to capture real-time patient data, no matter the location, via remote patient monitoring, and to transmit that data to providers and organizations approved by the consumer/patient, will become a critical capability for all healthcare providers. Of all the remote patient monitoring product designs, wearable medical devices are emerging as the best positioned to support the evolving patient-focused healthcare environment. This book is for those who are evaluating, selecting, implementing, managing, or designing wearable devices to monitor the health of patients and consumers. This book will provide the knowledge to understand the issues that mitigate the risk of wearable technologies so people can deliver successful projects using these technologies. It will discuss their use in remote patient monitoring, the advantages and disadvantages of different types of physiological sensors, different wireless communication protocols, and different power sources. It will describe issues and solutions in cybersecurity and HIPAA

compliance, as well as setting them up to be used in healthcare systems and by patients.

Practical Pharmaceutical Laboratory Automation Brian D. Bissett,2003-05-23 Laboratory automation is an increasingly important part of the job description of many laboratory scientists. Although many laboratory scientists understand the methods and principles involved in automation, most lack the necessary engineering and programming skills needed to successfully automate or interface equipment in the lab. A step-by-step, how-to reference and guide, Practical Pharmaceutical Laboratory Automation explores the processes needed to automate the majority of tasks required in research today. The author discusses topics ranging from automated mathematical analysis to robotic automation of chemical processes, to combinations of these and other processes. He presents a detailed discussion of high throughput screening and assay development and takes an in-depth look at Visual Basic as the primary programming language used in laboratories. The text has a dedicated web site (<http://www.pharmalabauto.com>) that contains all the sample code and examples contained within the text as well as other information related to laboratory automation. Providing a starting point for tackling automation problems, Practical Pharmaceutical Laboratory Automation helps you develop a strategy for automation that gets consistent results.

Analog Filter and Circuit Design Handbook Arthur Williams,2013-10-30 A single-source design reference providing expert guidance on analog filter and circuit design Analog Filter and Circuit Design Handbook emphasizes the operational amplifier (op-amp) as the key building block, and provides a strong foundation of understanding of how op-amps work and what their limitations are. The book contains numerous circuit examples that provide mathematical functions on analog signals in both a linear and non-linear manner. Audio applications such as audio power amplifiers and cross-over networks are included. Extensive coverage of both active and passive filters Discusses audio power amplifiers, various types of waveforms, and non-linear amplifier applications Leads you through how IC operational amplifiers work, their critical parameters, and how to properly choose the appropriate amplifier for a given application Tables help you select the proper device for your requirements; combining amplifiers made by different manufacturers into a single table saves you from having to perform extensive searches among different manufacturers' websites. Includes free downloads: Filter Solutions from Nuhertz Technologies--enables the design of Elliptic Function low-pass filters up to the tenth order ELI 1.0--allows the design of odd-order elliptic function LC low-pass filters up to a complexity of 15 nulls (transmission zeros) or the 31st order Filtform--an EXCEL spreadsheet arranged by chapter that contains all the significant formulas to simplify some of the calculations --

Atoms, Solids, and Plasmas in Super-Intense Laser Fields Dimitri Batani,Charles J. Joachain,S. Martellucci,Arthur N. Chester,2012-12-06 The recent developement of high power lasers, delivering femtosecond pulses of 20 2 intensities up to 10 W/cm , has led to the discovery of new phenomena in laser interactions with matter. At these enormous laser intensities, atoms, and molecules are exposed to extreme conditions and new phenomena occur, such as the very rapid multi photon ionization of atomic systems, the emission by these systems of very high order harmonics of the exciting laser light, the Coulomb explosion of molecules, and the acceleration of electrons close to the velocity of light. These phenomena generate new behaviour of bulk matter in intense laser fields, with great potential for wide ranging applications which include the study of ultra-fast processes, the development of high-frequency lasers, and the investigation of the properties of plasmas and condensed matter under extreme conditions of temperature and pressure. In particular, the concept of the fast ignitor approach to inertial confinement fusion (ICF) has been proposed, which is based on the separation of the compression and the ignition phases in laser-driven ICF. The aim of this course on Atom, Solids and Plasmas in Super-Intense Laser fields was to bring together senior researchers and students in atomic and molecular physics, laser physics, condensed matter and plasma physics, in order to review recent developments in high-intensity laser-matter interactions. The course was held at the Ettore Majorana International Centre for Scientific Culture in Erice from July 8 to July 14,2000.
