Uniform Distribution of Sequences L. Kuipers,H. Niederreiter,2012-05-24 The theory of uniform distribution began with Hermann Weyl's celebrated paper of 1916. In later decades, the theory moved beyond its roots in diophantine approximations to provide common ground for topics as diverse as number theory, probability theory, functional analysis, and topological algebra. This book summarizes the theory's development from its beginnings to the mid-1970s, with comprehensive coverage of both methods and their underlying principles. A practical introduction for students of number theory and analysis as well as a reference for researchers in the field, this book covers uniform distribution in compact spaces and in topological groups, in addition to examinations of sequences of integers and polynomials. Notes at the end of each section contain pertinent bibliographical references and a brief survey of additional results. Exercises range from simple applications of theorems to proofs of propositions that expand upon results stated in the text.

Uniforms of the US Army Ground Forces 1939-1945, Volume 1 Coats and Jackets, Part I Charles Lemons,2012 This book is one of a series of books on uniforms used by the U.S. Army Ground Forces during World War II. This volume covers service coats, field jackets, overcoats and mackinaw coats. It contains written descriptions and photographs to help the reader to positively identify the uniforms covered. It also includes information on how the uniform item was issued to troops, as well as a list of the manufacturers of the item.

Uniform Spaces John Rolfe Isbell,1964-12-31 Uniform spaces play the same role for uniform continuity as topological spaces for continuity. The theory was created in 1936 by A. Weil, whose original axiomatization was soon followed by those of Bourbaki and Tukey; in this book use is made chiefly of Tukey's system, based on uniform coverings. The organization of the book as a whole depends on the Eilenberg-MacLane notions of category, functor and naturality, in the spirit of Klein's Erlanger Program but with greater reach. The preface gives a concise history of the subject since 1936 and a foreword outlines the category theory of Eilenberg and MacLane. The chapters cover fundamental concepts and constructions; function spaces; mappings into polyhedra; dimension (1) and (2); compactifications and locally fine spaces. Most of the chapters are followed by exercises, occasional unsolved problems, and a major unsolved problem; the famous outstanding problem of characterizing the Euclidean plane is discussed in an appendix. There is a good index and a copious bibliography intended not to itemize sources but to guide further reading.

U.S. Army Uniforms and Equipment, 1889 Quartermaster General of the Army,1986-06-01 This rare book contains not only complete specifications but detailed line drawings of virtually every item of uniform and equipment issued. It is a valuable reference for articles used during the 1870s and 1880s, the period of the Indian wars. For much of the nineteenth century, the production of military clothing and equipment was geared to national emergencies. During the Mexican and Civil wars, the hardpressed Quartermaster Department was forced to rely on civilian and, later, European suppliers. A contract system too often resulted in profiteering, inferior goods, and administrative confusion. By 1887 reforms in the system were accompanied by strict specifications for matériel, which were published by the War Department in 1889 and distributed to fewer than sixty officers in the Quartermaster Department. Never before reprinted, this rare book contains not only complete specifications but detailed line drawings of virtually every item of uniform and equipment issued, from mosquito bars and tent stoves to overalls for mounted men and uniform coat buttons (the burnishing to be done in the best manner known to the trade). This valuable reference for articles used by the army during the period of the Indian wars will be of special interest to collectors, historians, archaeologists, curators, and antique dealers.
