**Army Biometric Applications** John D. Woodward, Katharine Watkins Webb, Elaine M. Newton, Melissa A. Bradley, David Rubenson, 2001-08-20 Every human possesses more than one virtually infallible form of identification. Known as biometrics, examples include fingerprints, iris and retinal scans, hand geometry, and other measures of physical characteristics and personal traits. Advances in computers and related technologies have made this a highly automated process through which recognition occurs almost instantaneously. With concern about its information assurance systems and physical access control increasing, the Army has undertaken an assessment of how it can use biometrics to improve security, efficiency, and convenience. This report examines the sociocultural concerns that arise among soldiers, civilian employees, and the general public when the

military mandates widespread use of biometrics. The authors see no significant legal obstacles to Army use of biometrics but recommend that the Army go beyond the provisions of the Privacy Act of 1974 to allay concerns related to this emerging technology. This report should be of interest to those responsible for access control as well as anyone concerned about privacy and technology issues.

Database Nation Simson Garfinkel, 2000-12-04 Fifty years ago, in 1984, George Orwell imagined a future in which privacy was demolished by a totalitarian state that used spies, video surveillance, historical revisionism, and control over the media to maintain its power. Those who worry about personal privacy and identity--especially in this day of technologies that encroach upon these rights--still use Orwell's Big Brother language to discuss privacy issues. But the reality is that the age of a monolithic Big Brother is over. And yet the threats are perhaps even more likely to destroy the rights we've assumed were ours. Database Nation: The Death of Privacy in the 21st Century shows how, in these early years of the 21st century, advances in technology endanger our privacy in ways never before imagined. Direct marketers and retailers track our every purchase; surveillance cameras observe our movements; mobile phones will soon report our location to those who want to track us; government eavesdroppers listen in on private communications; misused medical records turn our bodies and our histories against us; and linked databases assemble detailed consumer profiles used to predict and influence our behavior. Privacy--the most basic of our civil rights--is in grave peril. Simson Garfinkel--journalist, entrepreneur, and international authority on computer security--has devoted his career to testing new technologies and warning about their implications. This newly revised update of the popular hardcover edition of Database Nation is his compelling account of how invasive technologies will affect our lives in the coming years. It's a timely, far-reaching, entertaining, and thought-provoking look at the serious threats to privacy facing us today. The book poses a

disturbing question: how can we protect our basic rights to privacy, identity, and autonomy when technology is making invasion and control easier than ever before?Garfinkel's captivating blend of journalism, storytelling, and futurism is a call to arms. It will frighten, entertain, and ultimately convince us that we must take action now to protect our privacy and identity before it's too late.

**Adopting Biometric Technology** Ravindra Das,2017-11-22 Many types of security technologies are currently in use, with biometrics being one of the latest and most cutting-edge forms that has been produced for mass application. Biometrics, while intriguing, is often broached with hesitation and poor understanding. Adopting Biometric Technology: Challenges and Solutions advocates increased implementation of biometric technology areas of the world where it has been least accepted, particularly in the United States. This book looks at several specific applications of biometric technology, challenging issues that have obstructed the use of biometrics in security and offering realistic solutions for increasing its worldwide utilization. It is divided into three sections, with the first discussing societal barriers against the adoption of biometric technology in security. The second section presents case studies of specific applications, such as e-passports and e-voting, that have already been implemented and could be expanded into regions where usage is low. The third section lays out a case for the general practicality and value that biometrics offers to relevant business sectors, including the benefits of implementing the currently controversial technology in place of the conventional forms of verification. While biometric technology has been poorly accepted and adopted in the United States as well as other developed nations, it is already a popular tool in developing nations in Asia, Africa, and Eastern Europe. Adopting Biometric Technology examines the societal resistance hindering the broader usage of biometrics and provides practical solutions for overcoming those barriers while showing how its increased application would be overall

advantageous.

*Sensor-Actuator Supported Implicit Interaction in Driver Assistance Systems* Andreas Riener, 2011-06-07 Andreas Riener studies the influence of implicit interaction using vibro-tactile actuators as additional sensory channels for car-driver feedback and pressure sensor arrays for implicit information transmission from the driver toward the vehicle. The results of his experiments suggest the use of both vibro-tactile notifications and pressure sensor images to improve vehicle handling performance and to decrease the driver's cognitive workload.

Continuous Authentication Using Biometrics: Data, Models, and Metrics Traore, Issa, 2011-09-30 User authentication is the process of verifying whether the identity of a user is genuine prior to granting him or her access to resources or services in a secured environment. Traditionally, user authentication is performed statically at the point of entry of the system; however, continuous authentication (CA) seeks to address the shortcomings of this method by providing increased session security and combating insider threat. *Continuous Authentication Using Biometrics: Data, Models, and Metrics* presents chapters on continuous authentication using biometrics that have been contributed by the leading experts in this recent, fast growing research area. These chapters collectively provide a thorough and concise introduction to the field of biometric-based continuous authentication. The book covers the conceptual framework underlying continuous authentication and presents detailed processing models for various types of practical continuous authentication applications.

Biometrics in a Data Driven World Sinjini Mitra, Mikhail Gofman, 2016-12-01 *Biometrics in a Data Driven World: Trends, Technologies, and Challenges* aims to inform readers about the modern applications of biometrics in the context of a data-driven society, to familiarize them with the rich history of biometrics, and to provide them with a glimpse into the future of biometrics. The first section of the book discusses the fundamentals of biometrics and provides an overview of common biometric modalities, namely face, fingerprints, iris, and voice. It also discusses the history of the field, and provides an overview of emerging trends and opportunities. The second section of the book introduces readers to a wide range of biometric applications. The next part of the book is dedicated to the discussion of case studies of biometric modalities currently used on mobile applications. As smartphones and tablet computers are rapidly becoming the dominant consumer computer platforms, biometrics-based authentication is emerging as an integral part of protecting mobile devices against unauthorized access, while enabling new and highly popular applications, such as secure online

payment authorization. The book concludes with a discussion of future trends and opportunities in the field of biometrics, which will pave the way for advancing research in the area of biometrics, and for the deployment of biometric technologies in real-world applications. The book is designed for individuals interested in exploring the contemporary applications of biometrics, from students to researchers and practitioners working in this field. Both undergraduate and graduate students enrolled in college-level security courses will also find this book to be an especially useful companion.

**When China Sneezes** Cynthia McKinney, 2020-11-30 The 2019 novel Corona Virus, now COVID-19, stole global headlines in the opening months of 2020, and its many impacts are still to play out. The common adage, "If the US sneezes, the world catches a cold" is now demonstrable in a multiplicity of ways, but it is China that has sneezed. This anthology provides insight into the nature of global pandemics such as SARS, MERS, Ebola and HIV/AIDs, then focuses on Wuhan, where COVID-19 broke out -- though patient zero is as yet unknown. It examines the massive effort that China has undertaken since the outbreak to contain its spread, and includes personal stories of the first lockdown experiences. But the impact may be even more grave on the global economy than it is on global health. National and international analysts address the economic impact both within China's industrial heartland and on global business, as borders close, entire regions are on lockdown, world airlines cancel flights, major US corporations in China shut their doors, factory floors empty. and global supply chains break down, millions lose their jobs and small businesses tank.. Stocks and the prices of gold and oil are impacted. Soon after the COVID-19 outbreak was announced and the

extraordinary quarantine response by China was effected, it was learned that Event 201, a global coronavirus pandemic simulation was held just months earlier, in which a global coronavirus pandemic killed 65 million people. Many questions arise concerning Bg Pharma's push for vaccines, and the mainstream dismissal of the possibility of alternative treatments such as HCQ. Other disturbing questions have arisen: Has the disruption been overblown to inflict damage on China as part of a trade war? On the United States, which faces massive damage to its economy in the midst of an increasingly bitter political divide? What are the biowarfare implications –in the Wuhan instance, where China's first BSL-4 level laboratory is situated, or in the future in general, given the spread of BSL-4 level laboratories worldwide and most extensively the US, as states and private entities conduct research into germ warfare, including the use of bat-generated viruses, for both offensive and defensive purposes, putting the entire world at risk of accidental leakage or worse? Is this truly a pandemic -- or is it a plandemic, and if so, to what end? What are the likely consequences, intended and not.

**Trusted Systems** Liqun Chen, Moti Yung, 2010-07-10 This volume contains the 16 papers presented at the INTRUST 2009 conference, held in Beijing, China in December 2009. INTRUST 2009 was the first international conference on the theory, technologies and applications of trusted systems. It was devoted to all aspects of trusted computing systems, including trusted modules, platforms, networks, services and applications, from their fundamental features and functionalities to design principles, architecture and implementation technologies. The goal of the conference was to bring academic and industrial researchers, designers and implementers together with end-users of trusted systems, in order to foster the exchange of ideas in this challenging and fruitful area. The program consisted of 3 invited talks and 20 contributed papers. The invited speakers were Wenchang Shi

(Renmin University of China), David Wooten (Microsoft) and Scott Rotondo (Sun Microsystems). The first speaker provided a paper, which is included in these proceedings. Special thanks are due to these speakers. The contributed talks were arranged with two main tracks, one devoted to academic aspects of trusted computing systems (addressed by these proceedings), and the other devoted to industrial aspects. The contributed papers were selected out of 42 submissions from 13 countries. The refereeing process was rigorous, involving at least three (and mostly more) independent reports being prepared for each submission. We are very grateful to our hard-working and distinguished Program Committee for doing such an excellent job in a timely fashion.

*Mobile Networks for Biometric Data Analysis* Massimo Conti, Natividad Martínez Madrid, Ralf Seepold, Simone Orcioni, 2016-07-27 This book showcases new and innovative approaches to biometric data capture and analysis, focusing especially on those that are characterized by non-intrusiveness, reliable prediction algorithms, and high user acceptance. It comprises the peer-reviewed papers from the international workshop on the subject that was held in Ancona, Italy, in

October 2014 and featured sessions on ICT for health care, biometric data in automotive and home applications, embedded systems for biometric data analysis, biometric data analysis: EMG and ECG, and ICT for gait analysis. The background to the book is the challenge posed by the prevention and treatment of common, widespread chronic diseases in modern, aging societies. Capture of biometric data is a cornerstone for any analysis and treatment strategy. The latest advances in sensor technology allow accurate data measurement in a non-intrusive way, and in many cases it is necessary to provide online monitoring and real-time data capturing to support a patient's prevention plans or to allow medical professionals to access the patient's current status. This book will be of value to all with an interest in this expanding field.

*Biometrics* Joseph Pugliese, 2012-12-06 Biometric technologies, such as finger- or facial-scan, are being deployed across a variety of social contexts in order to facilitate and guarantee identity verification and authentication. In the post-9/11 world, biometric technologies have experienced an extraordinary period of growth as concerns about security and screening have increased. This book analyses biometric systems in terms of the application of biopolitical power – corporate, military and governmental – on the human body. It deploys cultural theory in examining the manner in which biometric technologies constitute the body as a target of surveillance and as a data-information object. The book thereby provides a comprehensive overview and critical analysis of both the local and global ramifications of biometric technologies.
