Linguistics Bruce Hayes, Susan Curtiss, Anna Szabolcsi, Tim Stowell, Edward Stabler, Dominique Sportiche, Hilda Koopman, Patricia Keating, Pamela Munro, Nina Hyams, Donca Steriade, 2013-04-19 *Linguistics: An Introduction to Linguistic Theory* is a textbook, written for introductory courses in linguistic theory for undergraduate linguistics majors and first-year graduate students, by twelve major figures in the field, each bringing their expertise to one of the core areas of the field - morphology, syntax, semantics, phonetics, phonology, and language acquisition. In each section the book is concerned with discussing the underlying principles common to all languages, showing how these are revealed in language acquisition and in the specific grammars of the world's languages.

Advanced Intelligent Computing Technology and Applications De-Shuang Huang, Prashan Premaratne, Baohua Jin, Boyang Qu, Kang-Hyun Jo, Abir Hussain, 2023-07-30 This three-volume set of LNCS 14086, LNCS 14087 and LNCS 14088 constitutes - in conjunction with the double-volume set LNAI 14089-14090- the refereed proceedings of the 19th International Conference on Intelligent Computing, ICIC 2023, held in Zhengzhou, China, in August 2023. The 337 full papers of the three proceedings volumes were carefully reviewed and selected from 828 submissions. This year, the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing. Its aim was to unify the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications. Therefore, the theme for this conference was

Advanced Intelligent Computing Technology and Applications. Papers that focused on this theme were solicited, addressing theories, methodologies, and applications in science and technology.

Languages and Compilers for Parallel Computing

Utpal Banerjee, Alex Nicolau, 1994-01-28 This book contains papers selected for presentation at the Sixth Annual Workshop on Languages and Compilers for Parallel Computing. The workshop was hosted by the Oregon Graduate Institute of Science and Technology. All the major research efforts in parallel languages and compilers are represented in this workshop series. The 36 papers in the volume are grouped under nine headings: dynamic data structures, parallel languages, High Performance Fortran, loop transformation, logic and dataflow language implementations, fine grain parallelism, scalar analysis, parallelizing compilers, and analysis of parallel programs. The book represents a valuable snapshot of the state of research in the field in 1993.

Multiword expressions Manfred Sailer, Stella

Markantonatou, Multiword expressions (MWEs) are a challenge for both the natural language applications and the linguistic theory because they often defy the application of the machinery developed for free combinations where the default is that the meaning of an utterance can be predicted from its structure. There is a rich body of primarily descriptive work on MWEs for many European languages but comparative work is little. The volume brings together MWE experts to explore the benefits of a multilingual perspective on MWEs. The ten contributions in this volume look at MWEs in Bulgarian, English, French, German, Maori, Modern Greek, Romanian, Serbian, and Spanish. They discuss prominent

issues in MWE research such as classification of MWEs, their formal grammatical modeling, and the description of individual MWE types from the point of view of different theoretical frameworks, such as Dependency Grammar, Generative Grammar, Head-driven Phrase Structure Grammar, Lexical Functional Grammar, Lexicon Grammar.

Linguistic Categorization John R. Taylor, 2003-11-06

This book provides a readable and clearly articulated introduction to an important area in the broader field of Cognitive Linguistics. Taking as its starting point the categorization of colour it explores the far reaching implications of Eleanor Rosch's seminal work on prototype categorization extending it's application of prototype theory from lexical semantics to the study of morphology, syntax, and phonology. First published in 1989 the third edition of this popular text has been fully revised and updated to include recent developments in Cognitive Linguistics. It introduces basic issues in the study of word meaning, and demonstrates the viability of the prototype approach to the study of phonology, syntax and acquisition. The new edition expands the treatment of polysemy, meaning relatedness, idioms and grammatical constructions The book presupposes no prior knowledge of linguistics and will therefore be particularly suited to undergraduate courses.

Coordination Models and Languages Jean-Marie

Jacquet, 2005-04-05 This book constitutes the refereed proceedings of the 7th International Conference on Coordination Models and Languages, COORDINATION

2005, held in Namur, Belgium in April 2005. The 19 revised full papers presented were carefully reviewed and selected from 88 submissions. Among the topics addressed are Web services, safe ambients, process calculus, abstract verification, role-based software, delegation modeling, distributed information flow, adaptive Web content provision, global computing, mobile agents, mobile computing, multithreaded code generation, shared data space coordination languages, automata specifications, time aware coordination, and service discovery.

Computational Linguistics and Intelligent Text Processing Alexander Gelbukh, 2018-10-09 The two-volume set LNCS 10761 + 10762 constitutes revised selected papers from the CICLing 2017 conference which took place in Budapest, Hungary, in April 2017. The total of 90 papers presented in the two volumes was carefully reviewed and selected from numerous submissions. In addition, the proceedings contain 4 invited papers. The papers are organized in the following topical sections: Part I: general; morphology and text segmentation; syntax and parsing; word sense disambiguation; reference and coreference resolution; named entity recognition; semantics and text similarity; information extraction; speech recognition; applications to linguistics and the humanities. Part II: sentiment analysis; opinion mining; author profiling and authorship attribution; social network analysis; machine translation; text summarization; information retrieval and text classification; practical applications.

Controlled Natural Language Norbert E Fuchs, 2010-07-12 This book constitutes the thoroughly refereed post-workshop proceedings of the Workshop on Controlled Natural Language, CNL 2009, held in Marettimo Island, Italy, in June 2009. The 16 revised full

papers presented together with 1 invited lecture were carefully reviewed and selected during two rounds of reviewing and improvement from 31 initial submissions. The papers are roughly divided into the two groups language aspects and tools and applications. Note that some papers fall actually into both groups: using a controlled natural language in an application domain often requires domain-specific language features.

The Nominal Structure in Slavic and Beyond Lilia Schürcks, Anastasia Giannakidou, Urtzi Etxeberria, 2013-12-12 The contributions in this volume shed new light on the discussion of whether the DP hypothesis applies universally or not. The issue is prominent not only for Slavic languages. Drawing on evidence from many other languages, Greek, East Asian, and Basque among them, the book has important implications for answering fundamental questions about the nature of definiteness and quantification.

Recent Advances in NLP: The Case of Arabic Language Mohamed Abd Elaziz, Mohammed A. A. Al-qaness, Ahmed A. Ewees, Abdelghani Dahou, 2019-11-29 In light of the rapid rise of new trends and applications in various natural language processing tasks, this book presents high-quality research in the field. Each chapter addresses a common challenge in a theoretical or applied aspect of intelligent natural language processing related to Arabic language. Many challenges encountered during the development of the solutions can be resolved by incorporating language technology and artificial intelligence. The topics covered include machine translation; speech recognition; morphological, syntactic, and semantic processing; information retrieval; text classification; text summarization; sentiment analysis; ontology construction; Arabizi translation; Arabic dialects;

Arabic lemmatization; and building and evaluating linguistic resources. This book is a valuable reference for scientists, researchers, and students from academia and industry interested in computational linguistics and artificial intelligence, especially for Arabic linguistics and related areas.

Reclaiming Karbala Epsita Halder,2023-05-18

Analysing an extensive range of texts and publications across multiple genres, formats and literary lineages, *Reclaiming Karbala* studies the emergence and formation of a viable Muslim identity in Bengal over the late-19th century through the 1940s. Beginning with an explanation of the tenets of the battle of Karbala, this multi-layered study explores what it means to be Muslim, as well as the nuanced relationship between religion, linguistic identity and literary modernity that marks both Bengaliness and Muslimness in the region. This book is an intervention into the literature on regional Islam in Bengal, offering a complex perspective on the polemic on religion and language in the formation of a jatiya Bengali Muslim identity in a multilingual context. This book, by placing this polemic in the context of intra-Islamic reformist conflict, shows how all these rival reformist groups unanimously negated the Karbala-centric commemorative ritual of Muharram and Shīʿī intercessory piety to secure a pro-Caliphate sensibility as the core value of the Bengali Muslim public sphere.

Language, Culture, Computation: Computational Linguistics and Linguistics Nachum Dershowitz, Ephraim Nissan,2014-12-05 This Festschrift volume is published in Honor of Yaacov Choueka on the occasion of this 75th birthday. The present three-volumes liber amicorum, several years in gestation, honours this outstanding Israeli computer scientist and is dedicated to him and to his

scientific endeavours. Yaacov's research has had a major impact not only within the walls of academia, but also in the daily life of lay users of such technology that originated from his research. An especially amazing aspect of the temporal span of his scholarly work is that half a century after his influential research from the early 1960s, a project in which he is currently involved is proving to be a sensation, as will become apparent from what follows. Yaacov Choueka began his research career in the theory of computer science, dealing with basic questions regarding the relation between mathematical logic and automata theory. From formal languages, Yaacov moved to natural languages. He was a founder of natural-language processing in Israel, developing numerous tools for Hebrew. He is best known for his primary role, together with Aviezri Fraenkel, in the development of the Responsa Project, one of the earliest fulltext retrieval systems in the world. More recently, he has headed the Friedberg Genizah Project, which is bringing the treasures of the Cairo Genizah into the Digital Age. This third part of the three-volume set covers a range of topics related to language, ranging from linguistics to applications of computation to language, using linguistic tools. The papers are grouped in topical sections on: natural language processing; representing the lexicon; and neologisation.

Salience of Information in Japanese Mitsuaki

Shimojo,2024-04-04 'Salience' is a linguistic phenomenon whereby information that is 'given', or 'new', is distributed and presented within a sentence in particular ways that convey its relevance. Although it has been widely described as the speaker's linguistic choices based on the hearer's perspective, it has received less attention as the speaker's manipulations of the hearer's cognitive states. This timely

study redresses that balance by analysing several morphosyntactic phenomena in Japanese, drawing on a wide range of authentic language examples. Taking a functionalist perspective, it brings together studies of grammar and discourse, which are often described separately, and deploys the combined grammar-discourse approach in Role and Reference Grammar, the structural-functionalist theory in which syntax, semantics, and pragmatics are equally central to our understanding of language. It also offers an analysis of second language (L2) learners' Japanese discourse, and demonstrates the relevance of that analysis to issues outside of traditional second language research.

Universal Traceability. A Comprehensive, Generic, Technology-Independent, and Semantically Rich Approach
Hannes Schwarz,2012 Traceability describes the ability of stakeholders to understand and follow relationships between artifacts that play some role in software development. It is essential for many development tasks, e.g., quality assurance, requirements management, or software maintenance. Aiming to overcome various deficiencies of existing traceability concepts, this book presents a universal approach describing required features of traceability solutions. This includes a technology-independent, generic template for the definition of semantically rich traceability relationship types and technology-independent patterns for the retrieval of traceability information, reflecting generic problems common to traceability applications. The universal approach is implemented on the basis of two concrete technologies which facilitate comprehensive traceability: the TGraph approach and OWL ontologies. The applicability of the approach is shown by three case studies

dealing with the reuse of software artifacts, process model refinement, and requirements management, respectively.

Uncertainty in Artificial Intelligence David

Heckerman, Abe Mamdani, 2014-05-12 Uncertainty in Artificial Intelligence contains the proceedings of the Ninth Conference on Uncertainty in Artificial Intelligence held at the Catholic University of America in Washington, DC, on July 9-11, 1993. The papers focus on methods of reasoning and decision making under uncertainty as applied to problems in artificial intelligence (AI) and cover topics ranging from knowledge acquisition and automated model construction to learning, planning, temporal reasoning, and machine vision. Comprised of 66 chapters, this book begins with a discussion on causality in Bayesian belief networks before turning to a decision theoretic account of conditional ought statements that rectifies glaring deficiencies in classical deontic logic and forms a sound basis for qualitative decision theory. Subsequent chapters explore trade-offs in constructing and evaluating temporal influence diagrams; normative engineering risk management systems; additive belief-network models; and sensitivity analysis for probability assessments in Bayesian networks. Automated model construction and learning as well as algorithms for inference and decision making are also considered. This monograph will be of interest to both students and practitioners in the fields of AI and computer science.
