### **Intelligent Communication Technologies and Virtual Mobile Networks** S. Balaji,Álvaro

Rocha,Yi-Nan Chung,2019-08-12 This book presents the outcomes of the Intelligent Communication Technologies and Virtual Mobile Networks Conference (ICICV 2019) held in Tirunelveli, India, on February 14-15, 2019. It presents the state of the art in the field, identifying emerging research topics and communication technologies and defining the future of intelligent communication approaches and virtual computing. In light of the tremendous growth ICT, it examines the rapid developments in virtual reality in communication technology and high-quality services in mobile networks, including the integration of virtual mobile computing and communication technologies, which permits new technologies based on the resources and services of computational intelligence, big data analytics, Internet of Things (IoT), 5G technology, automation systems, sensor networks, augmented reality, data mining, and vehicular ad hoc networks with massive cloud-based backend. These services have a significant impact on all areas of daily life, like transportation, e-commerce, health care, secure communication, location detection, smart home, smart city, social networks and many more.

Sectarianism in Iraq Fanar Haddad,2014-05-03 Viewing Iraq from the outside is made easier by compartmentalising its people (at least the Arabs among them) into Shi'as and Sunnis. But can such broad terms, inherently resistant to accurate quantification, description and definition, ever be a useful reflection of any society? If not, are we to discard the terms 'Shi'a' and 'Sunni' in seeking to understand Iraq? Or are we to deny their relevance and ignore them when considering Iraqi society? How are we to view the common Iraqi injunction that 'we are all brothers' or that 'we have no Shi'as and Sunnis' against the fact of sectarian civil war in 2006? Are they friends or enemies? Are they

united or divided; indeed, are they Iraqis or are they Shi'as and Sunnis? Fanar Haddad provides the first comprehensive examination of sectarian relations and sectarian identities in Iraq. Rather than treating the subject by recourse to broad-based categorisation, his analysis recognises the inherent ambiguity of group identity. The salience of sectarian identity and views towards self and other are neither fixed nor constant; rather, they are part of a continuously fluctuating dynamic that sees the relevance of sectarian identity advancing and receding according to context and to wider socioeconomic and political conditions. What drives the salience of sectarian identity? How are sectarian identities negotiated in relation to Iraqi national identity and what role do sectarian identities play in the social and political lives of Iraqi Sunnis and Shi'as? These are some of the questions explored in this book with a particular focus on the two most significant turning points in modern Iraqi sectarian relations: the uprisings of March 1991 and the fall of the Ba'ath in 2003. Haddad explores how sectarian identities are negotiated and seeks finally to put to rest the alarmist and reductionist accounts that seek either to portray all things Iraqi in sectarian terms or to reduce sectarian identity to irrelevance.

**A First Course in Calculus** Serge Lang, 2012-09-17 This fifth edition of Lang's book covers all the topics traditionally taught in the first-year calculus sequence. Divided into five parts, each section of A FIRST COURSE IN CALCULUS contains examples and applications relating to the topic covered. In addition, the rear of the book contains detailed solutions to a large number of the exercises, allowing them to be used as worked-out examples -- one of the main improvements over previous editions.

The Beginnings of Western Science David C. Lindberg, 2010-02-15 When it was first published in 1992, The Beginnings of Western Science was lauded as the first successful attempt ever to present a unified account of both ancient and medieval science in a single volume. Chronicling the

development of scientific ideas, practices, and institutions from pre-Socratic Greek philosophy to late-Medieval scholasticism, David C. Lindberg surveyed all the most important themes in the history of science, including developments in cosmology, astronomy, mechanics, optics, alchemy, natural history, and medicine. In addition, he offered an illuminating account of the transmission of Greek science to medieval Islam and subsequently to medieval Europe. *The Beginnings of Western Science* was, and remains, a landmark in the history of science, shaping the way students and scholars understand these critically formative periods of scientific development. It reemerges here in a second edition that includes revisions on nearly every page, as well as several sections that have been completely rewritten. For example, the section on Islamic science has been thoroughly retooled to reveal the magnitude and sophistication of medieval Muslim scientific achievement. And the book now reflects a sharper awareness of the importance of Mesopotamian science for the development of Greek astronomy. In all, the second edition of *The Beginnings of Western Science* captures the current state of our understanding of more than two millennia of science and promises to continue to inspire both students and general readers.

Lessons for Education from COVID-19 A Policy Maker's Handbook for More Resilient Systems OECD, 2020-12-15 The COVID-19 pandemic has shaken long-accepted beliefs about education, showing that learning can occur anywhere, at any time, and that education systems are not too heavy to move. When surveyed in May 2020, only around one-fifth of OECD education systems aimed to reinstate the status quo. Policy makers must therefore maintain the momentum of collective emergency action to drive education into a new and better normal.

So when an outback prospector discovers a species of small, appealing bipeds who might well turn out to be intelligent, language-using beings, it's a race to stop the corporation from eliminating the problem, which is to say, eliminating the Fuzzies—wide-eyed and ridiculously cute small, and furry—who are as much people as we are. **Mountain Risks: From Prediction to Management and Governance** Theo Van Asch, Jordi Corominas, Stefan Greiving, Jean-Philippe Malet, Simone Sterlacchini, 2013-09-30 This book offers a cross disciplinary treatment of the rapidly growing field of integrated approaches in risk assessment in mountainous areas. All major aspects related to hazard and risk assessment, risk management, and governance are illustrated with a wide range of case studies. The first part of the book focuses on new techniques for assessing the natural hazards of different types of mass movements. State-of-

the-art techniques for morphological characterization and monitoring of displacements are described. Computational advances are covered to explain the process systems and to quantify the hazards of fast and slow-moving landslides. In the second part of the book methodologies are included for assessing the impact of these natural hazards on the society in terms of risks. In this part, methodologies for defining the vulnerability of the elements at risk are shown and the use of run-out models for risk assessment of the dangerous rapid mass movements are evaluated. The third part of the book focuses on the response of society towards the problems of hazard and risk. It highlights the role of spatial planning, early warning systems and evacuation plans for risk management. It establishes practical thresholds for acceptable and tolerable risks and emphasizes the importance of education and communication to society. Audience The book is of interest to a wide range of experts from related disciplines, practitioners and stakeholders to demonstrate the importance of an integrated approach for all aspects of risks in mountainous areas.
