**The UN Watercourses Convention in Force** Flavia Rocha Loures, Alistair Rieu-Clarke, 2013-09-11 At the UN General Assembly in 1997, an overwhelming majority of States voted for the adoption of the United Nations Convention on the Law of the Non-Navigational Uses of International Watercourses – a global overarching framework governing the rights and duties of States sharing freshwater systems. Globally, there are 263 internationally shared watersheds, which drain the territories of 145 countries and represent more than forty percent of the Earth's land surface. Hence, inter-State cooperation towards the sustainable management of transboundary water supplies, in accordance with applicable international legal instruments, is a topic of crucial importance, especially in the context of the current global water crisis. This volume provides an assessment of the role and relevance of the UN Watercourses Convention and describes and evaluates its entry into force as a key component of transboundary water governance. To date, the Convention still requires further contracting States before it can enter into force. The authors describe the drafting and negotiation of the Convention and its relationship to other multilateral environmental agreements. A series of case studies assess the role of the Convention at various levels: regional (European Union, East Africa, West Africa, Central Asia, Central America and South America), river basin (e.g. the Mekong and Congo) and national (e.g. Ethiopia and Mexico). The book concludes by proposing how future implementation might further strengthen international cooperation in the management of water resources, to promote biodiversity conservation as well as sustainable and equitable use.

**International Agricultural Law and Policy** Hope Johnson, 2018-10-26 Globalised agriculture and food systems are at the crux of significant issues facing humanity from the rise in diet-related diseases to water pollution and biodiversity loss. Yet, legal scholarship on the regulation of agriculture and food is only now emerging. This timely book provides the first systematic analysis of the public international rules influencing agriculture. Each chapter considers the regulatory instruments that intersect with different components of agricultural systems from land tenure and soils through to agricultural in-puts and trade.

**Global Water** R. Quentin Grafton, Paul Wyrwoll, Chris White, David Allendes, 2014-05-28 This book brings together some of the world's leading water researchers with an especially written collection of chapters on: water economics; transboundary water; water and development; water and energy; and water concepts.

**International Environmental Law Compliance in Context** Belen Olmos Giupponi, 2021-04-22 This book explores how compliance with international environmental law has changed over time, offering a critical analysis of its current shifting patterns. Beginning with an overview of compliance with international environmental law, the book goes on to explore in detail: compliance in the different legal regimes instituted by Multilateral Environmental Agreements (MEAs), the addition of new subjects of international law, the legal relations between developed and developing countries, and the emergence of new compliance mechanisms in global environmental law. The analysis takes two key developments into consideration: the evolution in forms of compliance and non-state involvement in compliance with international environmental law. In the final section, three case studies are provided to demonstrate how these changes have occurred in selected areas: climate change, biodiversity and water resources. Throughout the book, topics are illustrated with extracts from specific international environmental law jurisprudence and relevant international environmental law instruments. In doing so, the book offers a comprehensive analysis of compliance with international environmental law, providing original insights and following a clear and systematic structure supported by reference to the sources. This book will be of interest to professionals, academics and students working in the field of compliance with international environmental law.

### **Progress and Prospects in the Management of Oxyanion Polluted Aqua**

**Systems** Nurudeen A. Oladoja, Emmanuel I. Unuabonah, 2021-07-01 This book is a compendium of research efforts and findings on the sources, occurrences, hydrochemistry, and several operating variables that influence the presence of oxyanions in aqua system. The content of this book has been designed to provide an insightful account of an array of innovative technologies for the management of the impacts of oxyanions in water, the progress and drawbacks of these technologies and those that have been effectively deployed to transform oxyanions in water to beneficial species. This book further x-rays global laws and economic policies targeted at effectively curtailing the presence of harmful oxyanions in water, challenges facing these policies, and future perspectives on how best to reduce the level of these harmful oxyanions in water to safe limit. The book is relevant to water professionals, policy makers, academics, and research students.

*Transboundary Freshwater Ecosystems in International Law* Ruby Moynihan, 2021-10-14 A global water crisis with far-reaching and interconnected environmental, social, health and economic impacts threatens the world. Healthy ecosystems and ecosystem services are degrading, and access to a sustainable water supply is increasingly inequitable both within and between States. This book demonstrates how to overcome the global freshwater ecosystem crisis by matching the scientific recommendations with an international legal framework fit for the task, which re-orientates international water law towards a stronger ecosystem approach that also protects vulnerable societies. It illustrates how to understand the fragmented legally binding and non-binding instruments of the United Nations Economic Commission for Europe environmental treaties as one coherent legal regime, which contributes to strengthening general rules and principles of the law concerning transboundary freshwater ecosystems. With the recent global opening of the UNECE regime, this book explores its potential role within the European region, Central Asia, Caucasus, Africa, the Middle East and beyond.

*A History of Water, Series III, Volume 2: Sovereignty and International Water Law* Terje Tvedt, Tadesse Kasse Woldetsadik, Owen McIntyre, 2015-05-30 As global climate change threatens to change radically both the political and physical climate with regard to water issues, so a reassessment of some of the fundamental principles of international water law is emerging. One of the most important principles being reassessed is the sovereign equality of states. This volume brings together more than thirty leading international water and legal specialists to explore the development and changing relationship between water, state sovereignty and international law. Offering fresh insights into one of the most pressing issues in global water policy, *Sovereignty and International Water Law* will form an essential reference for water professionals, legal specialists and policy makers alike.

**International Law and Transboundary Aquifers** Francesco Sindico, 2020-12-25 Groundwater amounts to 97% of available global freshwater resources. Emphasising the crucial importance of this in the context of increasing population, climate change and the overall global water crisis, Francesco Sindico offers a comprehensive study of the emerging body of international law applicable to transboundary aquifers.

**Implementing International Watercourses Law through the WEF Nexus and SDGs** Zeray Yihdego, Julie Gibson, 2020-11-16 *Implementing International Watercourses Law through the WEF Nexus and SDGs: An Integrated Approach Illustrated in the Zambezi River Basin* offers an innovative approach to the implementation of international water law (IWL) through integration of the law, the WEF Nexus and SDGs.

*The Water Legacies of Conventional Mining* James E. Nickum, David B. Brooks, Anthony Richard Turton, Surina Esterhuyse, 2018-10-15 The impact of mining is too big to ignore in a world of oversubscribed water. This is true of conventional mining as much as – or even more than – hydraulic fracturing (fracking). The legacy issues of such mining on water have not been fully appreciated, especially the irretrievable effects mining has had on

communities and ecosystems around the world through its impact on water. Yet this is not an 'us-or-them' problem: the wealth, influence and technical knowledge of mining interests can and must be part of the solution. All of the contributions to this volume either consider the deficiencies of existing governance structures and the need for better ones, or explore the use of new techniques to identify and evaluate social and environmental impacts. The chapters in this book were originally published in the journal *Water International*.

*Berkshire Encyclopedia of Sustainability* 3/10 Klaus Bosselmann, Daniel S. Fogel, J.B. Ruhl, Patricia Wouters, 2010-11-30 *The Law and Politics of Sustainability* explores efforts made to address pressing environmental concerns through legislation, conventions, directives, treaties, and protocols. Articles explain the mechanics of environmental law, the concepts that shape sustainable development, case studies and rulings that have set precedents, approaches to sustainable development taken by legal systems around the world, and more. Experts and scholars in the field raise provocative questions about the effectiveness of international law versus national law in protecting the environment, and about the effect of current laws on future generations. They analyze the successes and shortcomings of present legal instruments, corporate and public policies, social movements, and conceptual strategies, offering readers a preview of the steps necessary to develop laws and policies that will promote genuine sustainability.

*Transboundary Water Cooperation* Patricia Wouters, Huiping Chen, James E. Nickum, 2018-10-15 China and its neighbours face a series of water security issues, in which international law plays a vital role. Paramount to both policymakers and researchers in the field of water law, the current status of transboundary water cooperation schemes and how these operate in China is of global significance. Grounded in international experience, this comprehensive volume provides readers with an up-to-date overview of current international transboundary water resource sharing policies and practices, including detailed case studies at both domestic and international levels. The authors discuss existing international laws, treaties, and principles that may stimulate transboundary water cooperation and dialogue, and then analyse a number of international experiences with treaties in North America, Eastern Europe, and Central Asia. They take stock of China's water resource issues, legal practices and options, examine case studies of China's southern shared rivers, and explore some innovative approaches to cooperative management of shared waters within China. The articles in this book were originally published in the journal *Water International*.

*The Fairness 'Dilemma' in Sharing the Nile Waters* Zeray Yihdego, 2017-06-12 In *The Fairness 'Dilemma' in Sharing the Nile Waters*, Zeray Yihdego offers a comprehensive and critical account of the application of the fairness principle to sharing Nile water resources with particular emphasis on fairness regarding building, filling and benefits from the Grand Ethiopian Renaissance Dam and offers critical insights and lessons available to public international law.

**Inclusive Development and Multilevel Transboundary Water Governance - The Kabul River** Shakeel Hayat, 2020-03-11 The four decades long ideological-based insurgencies and conflict in the Kabul River Basin (KRB) have seriously hampered the relations and foreign policies of both Afghanistan and Pakistan. Consequently, it restricts them to solve various bilateral issues including transboundary waters. This lack of cooperation over shared water resources is one of the barriers to achieve inclusive and sustainable development. Additionally, it has contributed to the prevailing anarchic situation where each country does what it wants. The absence of a formal water-sharing mechanism coupled with poor water management practices within both the riparian countries are resulting various flow and administration-related challenges. Moreover, these challenges are further exacerbated by regional changes in social, political, environmental and economic systems. The scholarly literature suggests that an analytical transboundary

water governance framework is essential to address the challenges of water politicisation and securitisation, quality degradation and quantity reduction. Additionally, the literature rarely integrates (a) a multi-level approach, (b) an institutional approach (c) an inclusive development approach, or (d) accounts for the uses of different types of water and their varied ecosystem services for improved transboundary water governance. To enhance human wellbeing and achieve inclusive and sustainable development in the KRB this research indicates that it is essential to: (1) defrost frozen collaboration; (2) bypass border dispute; (3) use biodiversity and ecosystem services approach; (4) address existing and potential natural and anthropogenic challenges; (5) remove contradictions in the policy environment; (6) combat resource limits and dependence by promoting collaboration on long-term cost effective solutions; and (7) enhance knowledge and dialogue on inclusive development.

*The Nile River System, Africa* Bakenaz A. Zeidan, Aly Islam Metwally Aly, 2024-02-01 The Nile River System, Africa: Ecohydrology and Management from Catchment to Coast, Volume Two provides a critical synthesis of knowledge for an important global region. It covers water availability and needs in the Nile basin, focusing on socioeconomic, hydrological and ecological aspects and the catchment-coast continuum, also providing the information needed to develop a policy for the river that is less skewed toward immediate human needs and more focused on environmental impacts. Readers will find ecological perspectives, recent stresses, the current status of the basin, and more. The greater integration of ecological and river management themes is the main strength of this book, making it a strong reference for academics and water resources managers, as well as fishery experts, aquatic scientists and social scientists. Provides a basis for improved environmental management of the Nile River basin from its headwaters to the Mediterranean Sea Presents a multidisciplinary approach, covering both environmental and societal needs Includes case studies from this diverse river that can be applied globally

**Irresolvable Norm Conflicts in International Law** Valentin Jeutner, 2017-07-14 Conventionally, international legal scholarship concerned with norm conflicts focuses on identifying how international law can or should resolve them. This book adopts a different approach. It focuses on identifying those norm conflicts that law cannot and should not resolve. The book offers an unprecedented, controversial, yet sophisticated, argument in favour of construing such irresolvable conflicts as legal dilemmas. Legal dilemmas exist when a legal actor confronts a conflict between at least two legal norms that cannot be avoided or resolved. Addressing both academics and practitioners, the book aims to identify the character and consequences of legal dilemmas, to distil their legal function within the sphere of international law, and to encourage serious theoretical and practical investigation into the conditions that lead to a legal dilemma. The first part proposes a definition of legal dilemmas and distinguishes the term from numerous related concepts. Based on this definition, the second part scrutinises international law's contemporary norm conflict resolution and accommodation devices in order to identify their limited ability to resolve certain kinds of norm conflicts. Against the background of the limits identified in the second part, the third part outlines and evaluates the book's proposed method of dealing with legal dilemmas. In contrast to conventional approaches that recommend dealing with irresolvable norm conflicts by means of non liquet declarations, judicial law-making, or a balancing test, the book's proposal envisions that irresolvable norm conflicts are dealt with by judicial and sovereign actors in a complementary fashion. Judicial actors should openly acknowledge irresolvable conflicts and sovereign actors should decide with which norm they will comply. The book concludes with the argument that analysing various aspects of international law through the concept of a legal dilemma enhances its conceptual accuracy, facilitates more legitimate decision-making, and maintains its dynamic responsiveness.

**Collected Courses of the Xiamen Academy of International Law, Volume 3**

**(2010)** The Xiamen Academy of International Law,2011-06-22 The Collected Courses of the Xiamen Academy of International Law contain the Summer Courses taught at the Xiamen Academy of International Law by highly qualified international legal professionals.

New Perspectives on Transboundary Water Governance Luis Paulo Batista da Silva,Wagner Costa Ribeiro,Isabella Battistello Espíndola,2023-12-18 This book presents a novel examination of transboundary water governance, drawing on global case studies and applying new theoretical approaches. Excessive consumption and degradation of natural resources can either heighten the risks of conflicts or encourage cooperation within and among countries, and this is particularly pertinent to the governance of water. This book fills a lacuna by providing an interdisciplinary examination of transboundary water governance, presenting a range of novel and emerging theoretical approaches. Acknowledging that issues vary across different regions, the book provides a global view from South and Central America, Africa, Asia, and the Middle East, with the case studies offering civil society and public managers concrete situations that indicate difficulties and successes in water sharing between bordering countries. The volume highlights the links between natural resources, political geography, international politics, and development, with chapters delving into the role of paradiplomacy, the challenges of climate change adaptation, and the interconnections between aquifers and international development. With rising demand for water in the face of climate change, this book aims to stimulate further theoretical, conceptual, and methodological debate in the field of transboundary water governance to ensure peaceful and fair access to shared water resources. This book will be of interest to students and scholars of water resource governance from a wide variety of disciplines, including geography, international relations, global development, and law. It will also be of interest to professionals and policymakers working on natural resource governance and international cooperation.

**Charting Environmental Law Futures in the Anthropocene** Michelle Lim,2019-08-31 This book explores a range of plausible futures for environmental law in the new era of the Earth's history: the Anthropocene. The book discusses multiple contemporary and future challenges facing the planet and humanity. It examines the relationship between environmental law and the Anthropocene at governance scales from the global to the local. The breadth of issues and jurisdictions covered by the book, its forward-looking nature, and the unique generational perspective of the contributing authors means that this publication appeals to a wide audience from specialist academics and policy-makers to a broader lay readership.
